

# FCX – C SERIES FLOW TRANSMITTER

DATA SHEET

FHN

The FCX-C flow transmitter accurately measures differential pressure generated by a primary element, and transmits 4 to 20mA signal proportional to flow. The transmitter utilizes the unique micromachined capacitive silicon sensor with state-of-the-art microprocessor technology to provide exceptional performance and functionality.

## FEATURES

1. **High accuracy**  
0.1% accuracy (for a range of 50% to 100% of flow) for all calibrated spans is the standard feature for all models covering 0.6kPa(6mbar) draft range to 2000kPa(20bar) high differential. Fuji's micro-capacitance silicon sensor assures this feature.
2. **Minimum inventory**  
Electronics unit, communication module, local indicators and electronics housing are interchangeable among all FCX-C models. Process cover including bolts and nuts are common for all DP and flow transmitters, rating 3.2 and 14MPa (32 and 140bar).
3. **Upgradable electronics**  
A small plug-in communication module (to be ordered separately) can upgrade your FHN flow transmitters to have remote communication functions. A Hand Held Communicator (Model FXW, consult Data sheet No. EDS8-47) can remotely display or reconfigure process values as well as all transmitter configuration parameters at any point on the loop without affecting the transmitter signal.
4. **Fuji/HART bilingual communication module**  
The communication module is "bilingual" to speak both Fuji proprietary protocol and HART. Any HART compatible devices can communicate with FCX-A/C series transmitters.
5. **Application flexibility**  
Example features that render the FCX-C suitable for almost any process applications includes:
  - Analog indicator at either the electronics side or terminal side
  - Full range of hazardous location approvals
  - Built-in RFI filter and lightning arrester
  - 4  $\frac{1}{2}$ -digits LCD meter
