## Patient handset with telephone function

---

 General Information

Extended Product Type	74137A1
Product ID	2CSH240675R2003
EAN	8012542406754
Catalog Description	Patient handset with telephone function

## Long Description

Patient handset Clinos with ergonomic shape, adapted to be simple and user-friendly. It has different control functions for the telephony, TV / radio functions, etc. and for accounting services. Designed with a multi-line LC display including an illuminated background and an integrated RFID card reader, the patient handset enables patients to make calls, control device functions in their immediate area (light, blinds) as well as conduct simple voice communication with the nursing staff. The patient handset can be used as a fully-functional telephone. The patient handset has an easy-to-clean surface and is ergonomic to hold thanks to the all-round rubber seal; the housing is coated with an anti-microbial substance to reduce existing bacteria and prevent them from multiplying. The keyboard is fitted with color-coded function keys (TV, radio, telephone, service), additional keys (channel selection, volume, lighting buttons) and a clear telephone keyboard. The integrated speakers also act as a receiver for the TV audio; alternatively the audio signal can be transmitted via the headphone socket (3.5 mm jack plug). The data from the patient card are fed in and user-specific device functions activated via the RFID card reader (patient, alternatively staff). This enables the available services to be clearly assigned and facilitates billing of the telephone and TV functions and additional services. It is prepared for future firmware updates subject to license to enable the use of additional service features. The handset is placed in a purpose-built bracket which can be located either on the wall or on the bedside table.
