CF1

For Automotive Application with 125 °C heat resistance, Connectors for board-to-FPC

FEATURES

- Suitable for automotive applications that require vibration and heat resistance (125 °C) characteristics.
- " Anti-misoperation bridge structure " prevents unintended operation of mating lock.
- FPCs and boards can be directly connected without relay wiring harnesses
- Contact reliability is preserved by double-sided contact structure
- Inertia lock construction prevents half-mating (4 pins only)

APPLICATIONS

- Connection of board and FPC in DRL/rear lamp
- Connection of board and FPC in BMS

DETAILED FEATURES

■ Mating condition

■ Plug SMD mounting

■ Metal terminal contact

Automotive connectors CF1

PRINCIPAL USE

■ Connection of board and FPC in DRL/rear lamp

■ Connection of board and FPC in BMS (Battery Management System)

<< Elimination of relay wiring harness connectors by using CF1 >>

Automotive connectors CF1

RECEPTACLE

ORDERING INFORMATION

PRODUCT TYPES

Number of pins	Part No.	Packing	
		Inner carton (1-reel)	Outer carton
4 pins	AYC1F0410	800 pcs.	1,600 pcs.
6 pins	AYC1F0610		
8 pins	AYC1F0810		
10 pins	AYC1F1010		

Note) Order unit: For volume production: 1-inner carton (1-reel) units. For samples, please contact our sales representative.

Automotive connectors CF1

SPECIFICATIONS

Characteristics

Item		Specifications	Conditions																		
Electrical characteristics	Rated current	2.0 A/pin contact	Maximum current can be applied to one contact. (Except for the capacity of FPC.)																		
	Rated voltage	50 V DC																			
	Dielectric strength	1,000 V AC for 1 min	Detection current: 1 mA (No short or damage)																		
	Insulation resistance	Min. 100 MΩ	Using 500 V DC megger (applied for 1 min)																		
	Contact resistance	Max. 20 mΩ (initial) Max. 40 mΩ (after test)	Except FPC conductor resistance. Measured at 10 mA DC																		
Mechanical characteristics	Insertion force	Max. 36.0 N (Initial stage • No difference by number of pins.)																			
	Removal force	Max. 18.0 N (initial • 4 pins) Max. 23.0 N (initial • 6 pins) Max. 28.0 N (initial • 8 pins) Max. 33.0 N (initial • 10 pins)	Measured by removal of housing lock.																		
	Housing lock force	Min. 50.0 N (initial • No difference by number of pins.)																			
Environmental characteristics	Temperature and humidity of ambient storage and transportation	-40 to +125 °C (Including temperature rise when applying current) (Storage and transportation temperature is -40 to +50 °C in a packing state.) *1	No icing. No condensation.																		
	Soldering heat resistance	The initial specification must be satisfied electrically and mechanically	Max. peak temperature of 260 °C Reflow soldering: Max. 2 times (Temperature at connector terminal portion)																		
	Thermal shock resistance (receptacle and plug mated)	500 cycles, contact resistance: Max. 40 mΩ	<table border="1"> <thead> <tr> <th>Order</th> <th>Temperature (°C)</th> <th>Time (minutes)</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>-40₋₃⁰</td> <td>30</td> </tr> <tr> <td>2</td> <td>∟</td> <td>Max. 5</td> </tr> <tr> <td>3</td> <td>125₀⁺³</td> <td>30</td> </tr> <tr> <td>4</td> <td>∟</td> <td>Max. 5</td> </tr> <tr> <td></td> <td>-40₋₃⁰</td> <td></td> </tr> </tbody> </table> <p>*Vapor phase</p>	Order	Temperature (°C)	Time (minutes)	1	-40 ₋₃ ⁰	30	2	∟	Max. 5	3	125 ₀ ⁺³	30	4	∟	Max. 5		-40 ₋₃ ⁰	
	Order	Temperature (°C)	Time (minutes)																		
	1	-40 ₋₃ ⁰	30																		
	2	∟	Max. 5																		
	3	125 ₀ ⁺³	30																		
4	∟	Max. 5																			
	-40 ₋₃ ⁰																				
Humidity resistance (receptacle and plug mated)	96 hours, contact resistance : Max. 40 mΩ Insulation resistance: Min. 100 MΩ	Bath temperature 60 ±2 °C Humidity 90 % RH																			
Heat resistance (receptacle and plug mated)	120 hours, contact resistance: Max. 40 mΩ	Bath temperature 125 ±2 °C																			
Vibration resistance (receptacle and plug mated)	Current shut off should not exceed 1 μs during vibration test. (contact resistance: Max. 40 mΩ)	Acceleration: 44 m/s ² Frequency: 20 to 200 Hz Sweep time: 3 min/cycle Testing tool: Refer to Fig.1*2 Direction: 3 axes (X, Y, Z) (Different samples are used for each direction.) Time: 3 h Detection current: 10 mA																			
Shock resistance (receptacle and plug mated)	Current shut off should not exceed 1 μs during shock test.	Acceleration: 981 m/s ² Operation time: 6 ms Testing tool: Refer to Fig.1*2 Direction: 6 direction (±X, ±Y, ±Z) (Different samples are used for each direction.) Number: 3 times Detection current: 10 mA																			
Lifetime characteristics	Insertion and removal life	10 times (contact resistance: Max. 40 mΩ)	Speed: 25 mm/min																		
Solder paste thickness		The initial specification must be satisfied electrically and mechanically	Recommendation t = 0.15 mm																		

*1: As the humidity range differs depending on the ambient temperature, the humidity range indicated below should be used.
This temperature and humidity range does not guarantee permanent performance.

*2: Fig.1

PACKAGING SPECIFICATIONS (Unit: mm)

■ Receptacle

● Specifications for taping

In accordance with JIS C 0806-3:1999.
 However, does not apply to distance between center of round feed hole and center of embossed part.
 *Part dimension: Distance between center of round feed hole and center of recommended suction area.

● Specifications for the plastic reel

In accordance with EIAJ ET-7200B.

● Dimension table

Number of pins	A	B	C	D	E
4	32.0	28.4	14.2	12.0	33.4
6	44.0	40.4	20.2	16.4	45.4
8	44.0	40.4	20.2	20.8	45.4
10	56.0	52.4	26.2	25.2	57.4

● Receptacle orientation with respect to embossed tape feeding direction

PRECAUTION FOR USE (Unit: mm)

■ Design of PC board and FPC board

Conduct the recommended foot pattern design, in order to preserve the mechanical strength of soldering portion.

■ Recommended PC board and FPC board patterns

In order to reduce solder and flux rise, solder bridges and other issues make sure the proper levels of solder is used. The figures are recommended patterns. Please use them as a reference.

■ Receptacle

● Recommended PC board pattern (Mounting layout, TOP VIEW)

● Recommended metal mask pattern

Metal mask thickness: When $150 \mu\text{m}$
 (Post portion opening area ratio : 100 %)
 (Metal tab portion opening area ratio: 100 %)

● Dimension table

Dimensions Number of pins	A	B	C	D	E	F
4	20.60	16.60	5.20	—	—	—
6	25.00	21.00	5.20	7.40	—	—
8	29.40	25.40	5.20	7.40	9.60	—

10	5.20	7.40	9.60	11.80	27.70	25.70

ABOUT SAFETY REMARKS

Observe the following safety precautions to prevent accidents and injuries.

- Do not use these connectors beyond the specification sheets. The usage outside of specified rated current, dielectric strength, and environmental conditions and so on may cause circuitry damage via abnormal heating, smoke, and fire.
- In order to avoid accidents, your thorough specification review is appreciated. Please contact us if your usage is out of the specifications. Otherwise, Panasonic Industry Co., Ltd. cannot guarantee the quality and reliability.
- Panasonic Industry Co., Ltd. is consistently striving to improve quality and reliability. However, the fact remains that electrical components and devices generally cause failures at a given statistical probability. Furthermore, their durability varies with use environments or use conditions. In this respect, please check for actual automobile under actual conditions before use. Continued usage in a state of degraded condition may cause the deteriorated insulation, thus result in abnormal heat, smoke or firing. Please carry out safety design and periodic maintenance including redundancy design, design for fire spread prevention, and design for malfunction prevention so that no accidents resulting in injury or death, fire accidents, or social damage will be caused as a result of failure of the products or ending life of the products.

MOUNTING

- 1) Regarding PC board and FPC board design
 - Refer to the recommended PC board and FPC board pattern for keeping the strength of soldering.
- 2) Connector placement
 - In case of dry condition, please note the occurrence of static electricity. The product may be adhered to the embossed carrier tape or the cover tape in dry condition. Recommended humidity is from 40 % RH to 60 % RH and please remove static electricity by ionizer in manufacturing process.

3) Soldering

(1) Reflow soldering

- When cream solder printing is used, screen method is recommended.
- The relation between the screen opening area and foot pattern area should be referred to " Recommended metal mask and PC board pattern " drawings and " Recommended metal mask and FPC board pattern " drawings.
- If it is used with a thickness different from the recommended metal mask thickness, it may not be mounted, or the mounting strength may decrease. Please be careful to metal mask thickness.
- Please be careful to align terminals and solder pads, because this product does not have self-alignment features.
- The following diagram shows the recommended reflow soldering temperature profile.

- Infrared reflow soldering is able to passed two times.
- The temperature is measured at the connector terminals.
- The condition of solder or flux creepage and wettability depend on the type of solder and flux. Please set the reflow temperature and oxygen level by considering the solder and flux characteristics.

- (2) Manual soldering.
 - Please avoid the excessive solder. Because the excessive solder makes creepage at contact portion.
 - Please use the soldering iron under specified temperature and times.
 - As excessive force to terminal by manual soldering has some possibilities of terminal portion deformation, please be careful to the force by hand.
 - Please clean soldering iron tip.
- (3) Rework of soldering portion.
 - Rework shall be only one time.
 - Please avoid the supplementary flux in case of rework for soldering bridge, as this may cause flux creepage to contact portion.
 - Please use the soldering iron under specified temperature.

- 4) As the excessive force on the terminals may cause the deformation and the integrity of solderability will be lost during reflow soldering, please avoid dropping or rough handling of the product.
- 5) When the soldering is not completed, do not mate nor unmate the connectors. And the external compulsory force to the terminal may cause the fixing force lowering between the terminal and the molding or the coplanarity failures.
- 6) When cutting the PC board after mounting the receptacle, please avoid the stress at the soldering portion.

7) Cleaning treatment

- Cleaning this product is not needed basically. Please note the following points to prevent the negative effect to the product when cleaning is necessary.
- Please keep the cleanliness of the cleaning fluid to make sure that the contact surfaces are not contaminated by the cleaning fluid itself.
- Semi-aqueous cleaning solvent is recommended as some powerful solvent may dissolve the molding portion or the marked letters. Please contact us when other solvent is used.

INSERTION, REMOVAL AND RETENTION OF MATING

- This product is designed with ease of handling. However, in order to prevent the deformation or damage of contacts and molding, do not mate the connectors such as the following
Insertion or removal while prying from right to left or up and down.
Insertion of upside-down state.
- Inserting the plug with excessive force may break the products. Please be careful as excessive force is not applied.
- This product has lock structure for mating. However, the lock may be broken depending on reaction force due to FPC routing. Please confirm sufficiently at usage.
- When remove the connector, please hold the housing while pushing the latch-lock. Pulling the FPC only, will cause the product is damaged.
- Please avoid wiring, such as continue to apply stress to the base of the FPC. It may cause breaking of the FPC or failure of the products.

PRECAUTIONS FOR OPERATING ENVIRONMENT AND STORAGE ENVIRONMENT

- Panasonic Industry Co., Ltd. does not guarantee the failures caused by condensation.
- Please use our products within six months from the date of products acceptance.
Please confirm solderability, when using after the recommended storage period.

OTHER PRECAUTIONS

- When the coating material is used for preventing board isolation deterioration after soldering, please assure the coating material is not adhered on any part of connector.
- Please avoid the usage of connector as electric switching basically.
- Please care to the FPC pattern design such as the width and thickness, because the FPC has risk for excessive temperature rise due to factors on the FPC side.

Please refer to "the latest product specifications" when designing your product.
