## 2 Parameters

### 2.2 List of parameters

**Dependency:** Refer to: p9495, p9497, p9498, p9499  
Refer to: A01318, A01507

**Note:** The BI/CI parameters involved are listed in p9498[0...29] (signal sink).  
The associated BO/CO parameters are listed in p9499[0...29] (signal source).  
After p9496 = 1, 2 the following applies:  
- p9497 = 0  
- p9496 = 0

---

#### p9497 BICO interconnections to deactivated drive objects number / Interconn obj qty

## 2 Parameters

### 2.2 List of parameters

|    |   |        |         |   |
|----|---|--------|---------|---|
| 18 | Enable SS2E   | Enable | Inhibit | - |
| 20 | Enable SLA  | Enable | Inhibit | - |
| 23 | Enable deactivation SOS/SLS during an external STOP A   | Enable | Inhibit | - |
| 24 | Enable transfer SLS (SG) limit value via PROFIsafe      | Enable | Inhibit | - |
| 25 | Enable transfer safe position via PROFIsafe             | Enable | Inhibit | - |
| 26 | Enable safe gearbox switchover                          | Enable | Inhibit | - |
| 27 | Enable referencing via SCC                              | Enable | Inhibit | - |
| 28 | Enable safe cam   | Enable | Inhibit | - |
| 29 | Enable synchronous transfer safe position via PROFIsafe | Enable | Inhibit | - |
| 30 | Enable F-DI in PROFIsafe telegram                       | Enable | Inhibit | - |

**Dependency:**

Refer to: F01682, F01683

**Note:**

For bit 30 = 1, PROFIsafe telegrams 31, 901, 902 must be configured in the F host.

A change only becomes effective after a POWER ON.

SCA: Safe Cam

SDI: Safe Direction (safe motion direction)

SLA: Safely-Limited Acceleration

SLS: Safely-Limited Speed / SG: Safely reduced speed

SOS: Safe Operating Stop / SBH: Safe operating stop

SS2E: Safe Stop 2 External (Safe Stop 2 with external stop, external STOP D)

SS2ESR: Safe Stop 2 Extended Stop and Retract

SSM: Safe Speed Monitor (safety-relevant feedback signal from the speed monitoring)

#### p9501

#### SI Motion enable safety functions (Control Unit) / SI Mtn enable CU

**Min**

**Max**

**Factory setting**

-

-

0000 0000 0000 0000 0000  
0000 0000 0000 bin

**Description:**

Sets the enable signals for the safe motion monitoring.

**Bit field:**

| Bit | Signal name   | 1 signal | 0 signal | FP   |
|-----|---|----------|----------|------|
| 00  | Enable SOS/SLS (SBH/SG)                                 | Enable   | Inhibit  | -    |
| 01  | Enable SLP (SE)   | Enable   | Inhibit  | -    |
| 02  | Enable absolute position                                | Enable   | Inhibit  | -    |
| 03  | Enable actual value synchronization                     | Enable   | Inhibit  | -    |
| 04  | Enable SS2ESR   | Enable   | Inhibit  | -    |
| 16  | Enable SSM (n < nx) hysteresis and filtering            | Enable   | Inhibit  | 2823 |
| 17  | Enable SDI  | Enable   | Inhibit  | 2824 |
| 18  | Enable SS2E   | Enable   | Inhibit  | -    |
| 20  | Enable SLA  | Enable   | Inhibit  | -    |
| 23  | Enable deactivation SOS/SLS during an external STOP A   | Enable   | Inhibit  | -    |
| 24  | Enable transfer SLS (SG) limit value via PROFIsafe      | Enable   | Inhibit  | -    |
| 25  | Enable transfer safe position via PROFIsafe             | Enable   | Inhibit  | -    |
| 26  | Enable safe gearbox switchover                          | Enable   | Inhibit  | -    |
| 27  | Enable referencing via SCC                              | Enable   | Inhibit  | -    |
| 28  | Enable safe cam   | Enable   | Inhibit  | -    |
| 29  | Enable synchronous transfer safe position via PROFIsafe | Enable   | Inhibit  | -    |

**Dependency:**

Refer to: F01682, F01683

**Note:** A change only becomes effective after a POWER ON.  
 SCA: Safe Cam / SN: Safe software cam  
 SDI: Safe Direction (safe motion direction)  
 SLA: Safely-Limited Acceleration  
 SLS: Safely-Limited Speed / SG: Safely reduced speed  
 SOS: Safe Operating Stop / SBH: Safe operating stop  
 SS2ESR: Safe Stop 2 Extended Stop and Retract  
 SSM: Safe Speed Monitor (safety-relevant feedback signal from the speed monitoring)

**p9502****SI Motion axis type (Control Unit) / SI Mtn ax type CU**

|   |                                   |                      |                          |
|---|-----------------------------------|----------------------|--------------------------|
| SERVO, VECTOR,<br>SERVO_AC,<br>VECTOR_AC,<br>SERVO_I_AC,<br>VECTOR_I_AC | <b>Can be changed:</b> C2(95)     | <b>Calculated:</b> - | <b>Access level:</b> 3   |
|   | <b>Data type:</b> Integer16       | <b>Dyn. index:</b> - | <b>Func. diagram:</b> -  |

|   | 0 [°]                             | 737280 [°]           | 0 [°]                    |

**Description:** Sets the modulo value in degrees for rotary axes of the "Safe position" function.  
This modulo value is taken into account when safely referencing as well as when transferring the safe position via PROFIsafe when the absolute position is enabled.  
The value should be set so that it is precisely at 2<sup>n</sup> revolutions, so that when the range that can be represented (+/- 2048) overflows, this does not cause the position actual value to jump.  
The modulo function is deactivated for a value = 0.

**Dependency:** Refer to: p9501

Refer to: F01681

**Notice:** When the "SLP" function is activated, the modulo function must be deactivated as otherwise fault F01681 will be output.

If the absolute position is not enabled, then the parameterized modulo value is not taken into account.

**Note:** SLP: Safely-Limited Position

SP: Safe Position

---

|                   | 01         | Setpoint velocity limit for STOP F                  | No                 | Yes             | -         |
|                   | 03         | SS1 with OFF3 (brake response)                      | SS1E external stop | SS1 with OFF3   | -         |
|                   | 06         | Configuration test stop motion monitoring functions | Test automatic     | Test manual     | -         |

**Dependency:** Refer to: C01711

**Note:** For bit 00:  
 When the function is activated, a safety-relevant acknowledgment (internal event acknowledge) can be performed by selecting/deselecting STO.

For bit 01:  
 When the function is activated, the active setpoint velocity limit (CO: r9733) is set to zero when STOP F is active.

For bit 03:  
 When the bit is activated – when selecting function SS1 or activating a STOP B – an SS1E or a STOP B with stop, which should be externally initiated, is triggered instead of SS1 with a drive-based braking response. As a consequence, brake monitoring (SBR, SAM) is deactivated.  
 SS1E: Safe Stop 1 external (Safe Stop 1 with external stop)

For bit 06:  
 For the automatic test stop, the test stop can still be initiated via binector input p9705.  
 The automatic test stop is executed after power up, partial power up or a warm restart.

|                   | 06         | Configuration test stop motion monitoring functions | Test automatic     | Test manual     | -         |

**Dependency:** Refer to: C01711

**Note:** For bit 00:  
 When the function is activated, a safety-relevant acknowledgment (internal event acknowledge) can be performed by selecting/deselecting STO.

For bit 01:  
 When the function is activated, the active setpoint velocity limit (CO: r9733) is set to zero when STOP F is active.

For bit 02:

This bit defines the type of motor, which the sensorless actual value sensing evaluates.

For bit = 0, the actual velocity is calculated for an induction motor.

For bit = 1, the actual speed is calculated for a synchronous motor. This value depends on the setting in p0300.

Bit = 0 should be set if no motor is defined (p0300 = 0).

For bit 03:

When the bit is activated – when selecting function SS1 or activating a STOP B – an SS1E or a STOP B with stop, which should be externally initiated, is triggered instead of SS1 with a drive-based braking response. As a consequence, brake monitoring (SBR, SAM) is deactivated.

SS1E: Safe Stop 1 external (Safe Stop 1 with external stop)

For bit 05:

This bit defines the type of modulation, which the sensorless actual value sensing evaluates.

For bit = 0, the actual velocity is calculated for space vector modulation.

For bit = 1, the actual velocity is calculated for edge modulation. This value depends on the setting in p1802.

For bit 06:

For the automatic test stop, the test stop can still be initiated via binector input p9705.

The automatic test stop is executed after power up, partial power up or a warm restart.

| 05  | Actual value sensing sensorless edge modulation     | Yes                | No            | -  |
| 06  | Configuration test stop motion monitoring functions | Test automatic     | Test manual   | -  |

**Dependency:**

Refer to: C01711

**Note:**

For bit 00:

When the function is activated, a safety-relevant acknowledgment (internal event acknowledge) can be performed by selecting/deselecting STO.

For bit 01:

When the function is activated, the active setpoint velocity limit (CO: r9733) is set to zero when STOP F is active.

For bit 02:

This bit defines the type of motor, which the sensorless actual value sensing evaluates.

For bit = 0, the actual velocity is calculated for an induction motor.

For bit = 1, the actual velocity is calculated for a synchronous motor. This value depends on the setting in p0300.

Bit = 0 should be set if no motor is defined (p0300 = 0).

For bit 03:

When the bit is activated – when selecting function SS1 or activating a STOP B – an SS1E or a STOP B with stop, which should be externally initiated, is triggered instead of SS1 with a drive-based braking response. As a consequence, brake monitoring (SBR, SAM) is deactivated.

SS1E: Safe Stop 1 external (Safe Stop 1 with external stop)

For bit 05:

This bit defines the type of modulation, which the sensorless actual value sensing evaluates.

For bit = 0, the actual velocity is calculated for space vector modulation.

For bit = 1, the actual velocity is calculated for edge modulation. This value depends on the setting in p1802.

For bit 06:

When the bit is active, the test stop of the Extended Functions and the test stop of the onboard F-DO are carried out. The onboard F-DO can be deactivated via p10046.

Also for the automatic test stop, the test stop of the F-DO can be started using binector input p10007. The test stop for Extended Functions can still be started using p9705.

The automatic test stop is executed after power up, partial power up or a warm restart.

- - 0000 0000 bin

**Description:** Sets the configuration for the motor encoder and position actual value.  
The encoder that is used for the safe motion monitoring functions on the Control Unit must be parameterized in this parameter.

| Bit field: | Bit | Signal name  | 1 signal | 0 signal | FP |
|------------|-----|--|----------|----------|----|
|            | 00  | Motor encoder rotating/linear                      | Linear   | Rotating | -  |
|            | 01  | Position actual value sign change                  | Yes      | No       | -  |
|            | 04  | No STOP A after encoder fault for 1 encoder safety | Yes      | No       | -  |

**Dependency:** Refer to: p0404, p0410  
Refer to: F01671

**Note:** For safety functions that are not enabled (p9501 = 0), the following applies:  
- p9516.0 is automatically set the same as p0404.0 when the system boots.  
- p9516.1 is automatically set the same as p0410.1 when the system boots.  
For safety functions that are enabled (p9501 > 0), the following applies:  
- p9516.0 is checked to identify whether it coincides with p0404.0.

0.00 [nm] 250000000.00 [nm] 10000.00 [nm]

**Description:** Sets the grid division for a linear encoder.  
The encoder that is used for the safe motion monitoring functions on the Control Unit must be parameterized in this parameter.

**Dependency:** Refer to: p0407, p9516  
Refer to: F01671

**Note:** For safety functions that have not been enabled (p9501 = 0), the following applies: when booting p9517 is automatically set the same as p0407.  
For safety functions that are enabled (p9501 > 0), the following applies: p9517 is checked whether it coincides with p0407.

**p9518 SI Motion encoder pulses per revolution (Control Unit) / SI Mtn puls/rev CU**

|  | <b>Min</b>                        | <b>Max</b>           | <b>Factory setting</b>   |

0 16777215 2048

**Description:** Sets the number of encoder pulses per revolution for rotary encoders.  
The encoder that is used for the safe motion monitoring functions on the Control Unit must be parameterized in this parameter.

**Dependency:** Refer to: p0408, p9516  
Refer to: F01671

## 2 Parameters

### 2.2 List of parameters

**Note:** For safety functions that have not been enabled (p9501 = 0), the following applies: when booting, p9518 is automatically set the same as p0408.  
For safety functions that are enabled (p9501 > 0), the following applies: p9518 is checked whether it coincides with p0408.

| <b>Description:</b>   | Sets the numerator for the gearbox between the encoder (or motor in the case of encoderless monitoring functions) and the load. The active gearbox stage can be switched over via PROFIsafe.      |   |   |

## 2 Parameters

### 2.2 List of parameters

|                    |  |
|--------------------|--|
| <b>Index:</b>      | [0] = Gearbox 1<br>[1] = Gearbox 2<br>[2] = Gearbox 3<br>[3] = Gearbox 4<br>[4] = Gearbox 5<br>[5] = Gearbox 6<br>[6] = Gearbox 7<br>[7] = Gearbox 8   |
| <b>Dependency:</b> | Refer to: p9521  |
| <b>Note:</b>       | In the case of encoderless monitoring functions, the pole pair number must be multiplied by the numerator of the gearbox ratio.<br>Example:<br>Gearbox ratio 1:4, pole pair number (r0313) = 2<br>--> p9521 = 1, p9522 = 8 (4 x 2) |

---

#### p9523 SI Motion redundant coarse pos. value valid bits (Control Unit) / Valid bits CU

|  |   |   |   |
|--|---|---|---|
| SERVO, VECTOR,<br>HLA, SERVO_AC,<br>VECTOR_AC,<br>SERVO_I_AC,<br>VECTOR_I_AC | <b>Can be changed:</b> C2(95)<br><b>Data type:</b> Unsigned16<br><b>P-Group:</b> Safety Integrated<br><b>Not for motor type:</b> -<br><b>Min</b><br>0 | <b>Calculated:</b> -<br><b>Dyn. index:</b> -<br><b>Unit group:</b> -<br><b>Scaling:</b> -<br><b>Max</b><br>16 | <b>Access level:</b> 3<br><b>Func. diagram:</b> -<br><b>Unit selection:</b> -<br><b>Expert list:</b> 1<br><b>Factory setting</b><br>9 |
|--|---|---|---|

**Description:** Sets the number of valid bits of the redundant coarse position value.  
The encoder that is used for the safe motion monitoring functions on the Control Unit must be parameterized in this parameter.

**Dependency:** Refer to: r0470, p9323

**Note:** - after starting the copy function (p9700 = 57 hex), p9523 is set the same as r0470.

---

#### p9524 SI Motion Redundant coarse pos. value fine resolution bits (CU) / SI Mtn fine bit CU

|  |  |   |  |
|--|--|---|--|
| SERVO, VECTOR,<br>HLA, SERVO_AC,<br>VECTOR_AC,<br>SERVO_I_AC,<br>VECTOR_I_AC | <b>Can be changed:</b> C2(95)<br><b>Data type:</b> Integer16<br><b>P-Group:</b> Safety Integrated<br><b>Not for motor type:</b> -<br><b>Min</b><br>-16 | <b>Calculated:</b> -<br><b>Dyn. index:</b> -<br><b>Unit group:</b> -<br><b>Scaling:</b> -<br><b>Max</b><br>16 | <b>Access level:</b> 3<br><b>Func. diagram:</b> -<br><b>Unit selection:</b> -<br><b>Expert list:</b> 1<br><b>Factory setting</b><br>-2 |
|--|--|---|--|

**Description:** Sets the number of valid bits for the fine resolution of the redundant coarse position value.  
The encoder that is used for the safe motion monitoring functions on the Control Unit must be parameterized in this parameter.

**Dependency:** Refer to: r0471, p9324

**Note:** - after starting the copy function (p9700 = 57 hex), p9524 is set the same as r0471.

---

#### p9525 SI Motion Redundant coarse pos. value relevant bits (CU) / Relevant bits CU

|  |   |   |  |
|--|---|---|--|
| SERVO, VECTOR,<br>HLA, SERVO_AC,<br>VECTOR_AC,<br>SERVO_I_AC,<br>VECTOR_I_AC | <b>Can be changed:</b> C2(95)<br><b>Data type:</b> Unsigned16<br><b>P-Group:</b> Safety Integrated<br><b>Not for motor type:</b> -<br><b>Min</b><br>0 | <b>Calculated:</b> -<br><b>Dyn. index:</b> -<br><b>Unit group:</b> -<br><b>Scaling:</b> -<br><b>Max</b><br>16 | <b>Access level:</b> 3<br><b>Func. diagram:</b> -<br><b>Unit selection:</b> -<br><b>Expert list:</b> 1<br><b>Factory setting</b><br>16 |
|--|---|---|--|

**Description:** Sets the number of relevant bits for the redundant coarse position value.  
The encoder that is used for the safe motion monitoring functions on the Control Unit must be parameterized in this parameter.

**Dependency:** Refer to: p0414, r0472, p9325

**Note:** For safety functions that are not enabled (p9501 = 0), the following applies:  
 - p9525 is automatically set the same as r0472 when the system boots.  
 For safety functions that are enabled (p9501 > 0), the following applies:  
 - p9525 is checked to see that it matches r0472.

| <b>p9526 SI Motion encoder assignment second channel / SI Mtn enc chan 2</b> |  |                      |                          |
|--|--|----------------------|--------------------------|
| HLA  | <b>Can be changed:</b> C2(95)  | <b>Calculated:</b> - | <b>Access level:</b> 3   |
|  | <b>Data type:</b> Unsigned32   | <b>Dyn. index:</b> - | <b>Func. diagram:</b> -  |
|  | <b>P-Group:</b> Safety Integrated  | <b>Unit group:</b> - | <b>Unit selection:</b> - |
|  | <b>Not for motor type:</b> -   | <b>Scaling:</b> -    | <b>Expert list:</b> 1    |
|  | <b>Min</b>   | <b>Max</b>           | <b>Factory setting</b>   |
|  | 1  | 3                    | 2                        |
| <b>Description:</b>  | Sets the number of the encoder, which is used by the second channel for safe motion monitoring functions.  |                      |                          |
| <b>Dependency:</b>   | For the safe motion monitoring functions, the redundant safety position actual value sensing must be activated in the appropriate encoder data set (p0430.19 = 1).<br>Refer to: p0187, p0188, p0189, p0430   |                      |                          |
| <b>Note:</b>   | - for p9526 = 1, the encoder for the closed-loop speed control is used for the second channel of the motion monitoring functions (1-encoder system). This setting is only permissible when using a DQI encoder.<br>- a change only becomes effective after a POWER ON. |                      |                          |

| <b>p9526 SI Motion encoder assignment second channel / SI Mtn enc chan 2</b> |  |                      |                          |
|--|--|----------------------|--------------------------|
| SERVO, VECTOR,<br>SERVO_AC,<br>VECTOR_AC,<br>SERVO_I_AC,<br>VECTOR_I_AC      | <b>Can be changed:</b> C2(95)  | <b>Calculated:</b> - | <b>Access level:</b> 3   |
|  | <b>Data type:</b> Unsigned32   | <b>Dyn. index:</b> - | <b>Func. diagram:</b> -  |

|              | 0.000 [%]  | 100.000 [%]          | 80.000 [%]               |

**Description:** This is an evaluation factor to define the setpoint limit from the selected actual speed limit.  
The active SLS limit value is evaluated with this factor and is made available as setpoint limit in r9733.

**Dependency:** This parameter only has to be parameterized for the motion monitoring functions integrated in the drive (p9601.2 = 1)  
 r9733[0] = p9531[x] x p9533 (converted from the load side to the actuator side)  
 r9733[1] = - p9531[x] x p9533 (converted from the load side to the actuator side)  
 [x] = Selected SLS stage  
 Conversion factor from the actuator side to the load side:  
 - actuator type = rotary and axis type = linear: p9522 / (p9521 x p9520)  
 - otherwise: p9522 / p9521

Refer to: p9501, p9531, p9601

**Note:** The active actual speed limit is selected via safety-relevant inputs (SGE).  
When selecting SOS or a STOP A ... D, setpoint 0 is specified in r9733.

|   |                                   |                      | [28] 213                 |
|   |                                   |                      | [29] 214                 |

**Description:**

Assigns the individual cams to the maximum of 4 cam tracks and defines the numerical value for the SGA "cam range".

p9538[0...29] = CBA dec

C = Assignment of the cam to the cam track.

Valid values are 1, 2, 3, 4.

BA = Numerical value for the SGA "cam range".

If the position lies in the range of this cam, the value BA is signaled to the safety-relevant logic via the SGA "cam range" of the cam track set using C.

Valid values are 0 ... 14. Each numerical value may only be used once for each cam track.

Examples:

p9538[0] = 207

Cam 1 (index 0) is assigned cam track 2. If the position lies within the range of this cam, a value of 7 is entered in the SGA "cam range" of the second cam track.

p9538[5] = 100

Cam 6 (index 5) is assigned cam track 1. If the position lies within the range of this cam, a value of 0 is entered in the SGA "cam range" of the first cam track.

|-----------|-------------|-----------|
| 0.00 [ms] | 500.00 [ms] | 0.00 [ms] |
|-----------|-------------|-----------|

**Description:** Sets the filter time for the SSM feedback signal to detect standstill (n < nx).  
**Note:** The filter time is effective only if the function is enabled (p9501.16 = 1).  
 The parameter is included in the data cross-check of the two monitoring channels.  
 The set time is rounded internally to an integer multiple of the monitoring clock cycle.  
 SSM: Safe Speed Monitor (safety-relevant feedback signal from the speed monitoring)

|---------------|---------------------|----------------|

**Description:** Sets the velocity limit for the SSM feedback signal to detect standstill (n < nx).  
 When this limit value is undershot, the signal "SSM feedback signal active" (SGA n < n\_x) is set.  
 For p9568 = 0, the value in p9546 is also applicable for SAM/SBR.

**Caution:** The following applies for p9506 = 3:  
 The "SAM/SBR" function is deactivated if the selected threshold value is undershot.

**Note:** F-DO: Failsafe Digital Output / SGA: Safety-related output  
 SAM: Safe Acceleration Monitor (safe acceleration monitoring)  
 SBR: Safe Brake Ramp (safe brake ramp monitoring)  
 SSM: Safe Speed Monitor (safety-related feedback signal from the speed monitoring) / SGA n < nx: Safety-related output n < nx

| <b>Description:</b>  | Sets the switchover velocity to SOS/SLS level.<br>Below this velocity limit, for a transition to SOS/SLS level, standstill (zero velocity) is assumed.<br>The transition times from STOP C, D, E and the delay time when selecting SOS are canceled if this velocity threshold is fallen below. The wait time from p9569 is started, and after it has expired, SOS is active.<br>The transition time from a higher to a lower safety-limited velocity level is canceled when this velocity level is fallen below. The wait time from p9569 is started, and after it has expired, the new SLS level becomes active.<br>For a STOP C, this switchover velocity is the only criterion for prematurely activating an SOS. In the other cases mentioned here, it must first have been signaled that the axis had correctly braked. |                      |                          |

|   | <b>Not for motor type:</b> -      | <b>Scaling:</b> -    | <b>Expert list:</b> 1    |
|   | <b>Min</b>                        | <b>Max</b>           | <b>Factory setting</b>   |
|   | 5.00 [ms]                         | 1000.00 [ms]         | 100.00 [ms]              |

**Description:** Sets the delay time to evaluate the encoderless actual value sensing after the pulses have been enabled.  
 The value must be greater than or equal to the motor magnetizing time (p0346).

**Dependency:** Refer to: C01711

**Caution:** The safety functionality is only completely guaranteed after this time has expired.

**Notice:** If this value is reduced, this can have a negative impact on the actual value acquisition and plausibility check – and result in Safety message C01711 with the message value 1041 or 1042.

**Note:** This parameter is only effective for encoderless actual value sensing (p9506/p9306 = 1, 3).  
 The set time is rounded internally to an integer multiple of the monitoring clock cycle.

---

**p9587 SI Motion actual value sensing sensorless filter time (CU) / ActV sl t\_filt CU**

|   |                                   |                      |                          |

|   | 0.00 [ms]                         | 100.00 [ms]          | 25.00 [ms]               |

**Description:** Sets the filter time for smoothing the actual value with sensorless actual value sensing.

**Notice:** A longer filter time results in a longer response time.

**Note:** This parameter is only effective for encoderless actual value sensing (p9506/p9306 = 1, 3).  
 The smoothing is realized with a 1st order lowpass filter  
 For p9587 = minimum value, the filter is deactivated.  
 The set time is rounded internally to an integer multiple of the monitoring clock cycle.

---

**p9588 SI Motion actual value sensing sensorless minimum current (CU) / ActV sl I\_min CU**

|   |                                   |                      |                          |

|   | 0.00 [%]                          | 1000.00 [%]          | 10.00 [%]                |

**Description:** Sets the minimum current for encoderless actual value sensing referred to 1 A (i.e. 1 % = 10 mA).  
 - the value must be increased if C01711 has occurred with message value 1042.  
 - the value must be decreased if C01711 has occurred with message value 1041.  
 For synchronous motors, the following condition must be fulfilled:  
 $|p0305 \times p9783| \geq p9588 \times 1.2$

**Recommendation:** If required, the correct value of the motor minimum current should be determined by making the appropriate measurements.

**Dependency:** Refer to: r9785  
 Refer to: C01711

## 2 Parameters

### 2.2 List of parameters

**Notice:** If this percentage value is reduced excessively, then this can result in a safety message and an inaccurate actual value.

**Note:** This parameter is only effective for encoderless actual value sensing (p9506/p9306 = 1, 3).

---

#### **p9589 SI Motion act. value sensing sensorless acceleration limit (CU) / ActV sl a\_lim CU**

|   | 10.00 [%]                         | 3300.00 [%]          | 100.00 [%]               |

**Description:** Sets the acceleration limit to filter velocity fluctuations.  
If this percentage value is increased, when accelerating, velocity peaks that do not reflect the real velocity characteristic can occur.  
If this value is decreased, and this dampens the velocity peaks when accelerating.  
- the value must be increased if C01711 with message value 1043 has occurred.  
- the value must be lowered if acceleration procedures have led to an excessive Safety actual velocity.

**Recommendation:** The setting of this parameter depends on the motor and closed-loop control, and must be newly determined for each configuration.

To do this, a measurement should be performed while the actual value jumps, and the limit in r9785[0] must be set so low using p9589, so that it is exceeded by the value in r9785[1] a maximum of four times per second. The actual value correction filter intervenes at this instant in time. The step is no longer so drastic.

**Dependency:** Refer to: r9784

Refer to: C01711

**Note:** This parameter is only effective for encoderless actual value sensing (p9506/p9306 = 1, 3).

For p9589 = maximum value, the filter is deactivated.

Diagnostics parameter p9784 must be used to correctly set this parameter.

---

**Description:** Sets the enable signals for the safety functions integrated in the drive and the type of selection on the Control Unit. Not all of the settings listed below will be permissible, depending on the Control Unit and Motor Module or Power Module being used:

0000 hex:  
 Safety functions integrated in the drive inhibited (no safety function).

0001 hex:  
 Basic functions are enabled via onboard terminals (permissible for r9771.0 = 1).

0004 hex:  
 Extended functions via Terminal Module 54F (TM54F) have been enabled (permissible for r9771.5 = 1).

0005 hex:  
 Extended functions via Terminal Module 54F (TM54F) and the basic functions via onboard terminals have been enabled (permissible for r9771.5 = 1).

0008 hex:  
 Basic functions are enabled via PROFIsafe (permissible for r9771.6 = 1).

0009 hex:  
 Basic functions are enabled via PROFIsafe onboard terminals (permissible for r9771.6 = 1).

000C hex:  
 Extended functions are enabled via PROFIsafe (permissible for r9771.4 = 1).

000D hex:  
 Extended functions are enabled via PROFIsafe and basic functions via onboard terminals (permissible for r9771.4 = 1).

0024 hex:  
 Extended functions without selection are enabled (permissible for r9771.16 = 1).

0025 hex:  
 Extended functions without selection and basic functions via onboard terminals are enabled (permissible for r9771.16 = 1).

0040 hex:  
 Basic functions are enabled via TM54F

0041 hex:  
 Basic functions are enabled via TM54F and onboard terminals.

## 2 Parameters

### 2.2 List of parameters

| Bit field:         | Bit  | Signal name  | 1 signal | 0 signal | FP   |

**Description:** Sets the enable signal for the function "Safe Brake Control" (SBC) on the Control Unit.

**Value:**  
0: Inhibit SBC  
1: Enable SBC

**Dependency:** Refer to: p9802

**Note:** The "Safe Brake Control" function is not activated until at least one safety monitoring function has been enabled (i.e. p9501 not equal to 0 and/or p9601 not equal to 0).

It does not make sense to parameterize "no motor holding brake available" and enable "Safe Brake Control" (p1215 = 0, p9602 = p9802 = 1) if there is no motor holding brake.

The parameterization "motor holding brake the same as sequence control, connection via BICO" and "Safe Brake Control" enabled (p1215 = 3, p9602 = 1, p9802 = 1) is not practical.

The parameterization "motor holding brake without feedback signals" and "Safe Brake Control" enabled (p1278 = 1, p9602 = 1, p9802 = 1) is not permissible.

CU: Control Unit

SBC: Safe Brake Control

SI: Safety Integrated

## 2 Parameters

### 2.2 List of parameters

**Note:** The following signal sources are permitted:  
- fixed zero (standard setting).  
- digital inputs DI 0 ... 7, 16, 17, 20, 21 on the Control Unit 320-2 (CU320-2).  
- digital inputs DI 0 ... 3, 16, 17 on the Controller Extensions (CX32-2, NX10.3, NX15.3).  
It is not permitted to establish an interconnection to a digital input in the simulation mode.

## 2 Parameters

### 2.2 List of parameters

**Note:** After successful execution, this parameter is automatically reset to zero.  
Data must then be saved in a non-volatile fashion (p0977 = 1 or p0971 = 1 or "copy RAM to ROM").  
The parameter cannot be written to using a project download, and cannot be set in an offline project.

| <b>Description:</b>  | Displays the actual load-side actual values of both monitoring channels and their difference.   |   |   |
| <b>Index:</b>  | [0] = Load-side actual value on the CU<br>[1] = Load-side actual value on the second channel<br>[2] = Load-side actual value difference CU - second channel<br>[3] = Load-side max. actual value difference CU - second channel<br>[4] = Load-side actual value as safe position via PROFIsafe<br>[5] = Load-side additional actual value difference CU - second channel  |   |   |
| <b>Dependency:</b>   | Refer to: r9713   |   |   |
| <b>Note:</b>   | For index [0]:<br>The display of the load-side position actual value on the Control Unit is updated in the monitoring clock cycle.<br>For index [1]:<br>The display of the load-side position actual value on the second channel is updated in the KDV clock cycle (r9724) and delayed by one KDV clock cycle.  |   |   |

For index [2]:

The difference between the load-side position actual value on the Control Unit and load-side position actual value in the second channel is updated in the KDV clock cycle (r9724) and delayed by one KDV clock cycle.

For index [3]:

The maximum difference between the load-side position actual value on the Control Unit and the load-side position actual value on the second channel.

For index [4]:

Displays the load-side position actual value when enabling the function "Safe position via PROFIsafe".

The value is an average value from the values in index 0 and 1.

When the function is not enabled, the content corresponds to the value in index 0.

For index [5]:

The display of the maximum additional difference between the load-side position actual value on the Control Unit, and the load-side position actual value in the second channel, which can occur as a result of the actual value sensing delay in the EnDat 2.2 converter.

Input in p9542: p9708[3] + p9708[5], after performing the measurement for the mechanical tolerance by performing a test run, where, after completion, the maximum tolerance that has occurred is displayed in p9708[3].

|                     | 21   | Deselect SS2ESR  | Yes   | No              |
|                     | 28   | SLS (SG) override bit 0  | Set   | Not set         |

## 2 Parameters

### 2.2 List of parameters

|    |                         |     |         |   |
|----|-------------------------|-----|---------|---|
| 29 | SLS (SG) override bit 1 | Set | Not set | - |
| 30 | SLS (SG) override bit 2 | Set | Not set | - |
| 31 | SLS (SG) override bit 3 | Set | Not set | - |

**Note:**

For r9719.0 and r9719.1:

These two bits must be considered together.

- if SOS/SLS (SBH/SG) is deselected using bit 0, then assignment of bit 1 is irrelevant.

- if SOS/SLS (SBH/SG) is selected using bit 0, then a changeover is made between SOS (SBH) and SLS (SG) using bit 1.

SCA: Safe Cam

SDI: Safe Direction (safe motion direction)

SLA: Safely-Limited Acceleration

SLP: Safely-Limited Position / SE: Safe software limit switches

SLS: Safely-Limited Speed / SG: Safely reduced speed

SOS: Safe Operating Stop / SBH: Safe operating stop

SS2ESR: Safe Stop 2 Extended Stop and Retract

#### r9719.0...31

| <b>Note:</b>  | For bit 00:<br>A required dynamization is also displayed via alarm A01679.                                |  |                          |                 |           |
|   | For bit 01:<br>This bit can be used, to execute a drive-based or control-based ESR.                       |  |                          |                 |           |
|   | For bit 02:<br>This bit is set if communication fails and the delay time of the stop response is running. |  |                          |                 |           |

For bit 04:

When sensing the velocity without encoder, a distinction is made between the closed-loop speed controlled and open-loop speed controlled (U/f) modes.

For bit 09:

Safe pulse cancellation is a state that can only occur for the combination of velocity sensing without encoder (p9506) and drive-integrated motion monitoring functions without selection (p9601.5). In this state, internally an STO is initiated, which can be withdrawn again using an OFF1 enable.

For bit 12:

Test stop active, is also displayed using safety message C01798.

ESR: Extended Stop and Retract

SAM: Safe Acceleration Monitor (safe acceleration monitoring)

SBR: Safe Brake Ramp (safe brake ramp monitoring)

**Description:**

For index [0]:

Displays the message value that resulted in the STOP F on the drive.

Value = 0:

The Control Unit signaled a STOP F.

Value = 1 ... 999:

Number of the incorrect date in the data cross-check between the monitoring channels.

Value >= 1000:

Additional diagnostic values of the drive.

For index [1]:

Displays the value of the Control Unit that resulted in the STOP F.

For index [2]:

Displays the value from the second channel that resulted in the STOP F.

**Index:**

[0] = Message value for KDV

[1] = Control Unit KDV actual value

[2] = Components KDV actual value

**Dependency:**

Refer to: C01711

**Note:**

The significance of the individual message values is described in message C01711.

KDV: Data cross-check

For index [1, 2]:

When Safety message C01711 with message value >= 1000 occurs, these indices are not supplied with values.

**Description:** Displays the safe position accuracy (load side).  
As a result of the actual value sensing for safe motion monitoring functions, this accuracy can be achieved as the maximum.  
In the case of a 2-encoder system, the accuracy of the poorer encoder - as a result of the number of encoder pulses - is displayed here.

**Note:** The parameter is only of significance for enabled safety with encoder (otherwise "0").

|  |  |   |  |
|--|--|---|--|
| <b>r9732[0...1]</b>  | <b>SI Motion velocity resolution / SI Mtn v_res</b>  |   |  |
| SERVO, VECTOR,<br>HLA, SERVO_AC,<br>VECTOR_AC,<br>SERVO_I_AC,<br>VECTOR_I_AC | <b>Can be changed:</b> -<br><b>Data type:</b> FloatingPoint32<br><b>P-Group:</b> Safety Integrated<br><b>Not for motor type:</b> -<br><b>Min</b><br>- [mm/min] | <b>Calculated:</b> -<br><b>Dyn. index:</b> -<br><b>Unit group:</b> -<br><b>Scaling:</b> -<br><b>Max</b><br>- [mm/min] | <b>Access level:</b> 3<br><b>Func. diagram:</b> -<br><b>Unit selection:</b> -<br><b>Expert list:</b> 1<br><b>Factory setting</b><br>- [mm/min] |

**Description:** Displays the velocity resolution for safety-relevant motion monitoring functions.  
For index [0]:  
Displays the safe velocity resolution (load side). Setpoints for velocity limits or parameter changes for velocities below this threshold have no effect.

For index [1]:  
Displays the safe velocity accuracy based on the safe encoder accuracy

**Index:** [0] = Actual velocity resolution  
[1] = Minimum velocity resolution

**Note:** For index [0]:  
This parameter does not provide any information about the actual accuracy of the velocity sensing. This depends on the type of actual value sensing, the gear factors as well as the quality of the encoder being used.

Conversion of:  
(internal fixed value/ Tsi) to mm/min (linear) or rpm (rotary) with Tsi = p9500 (SI Motion monitoring clock cycle).

Example:  
For Tsi = 12 ms, r9732[0] = 5 mm/min (linear) or 1/72 rpm (rotary) is obtained.

For index [1]:  
- for a 2-encoder system with non safety-capable encoders, this means the poorer value for both encoders. Index[1] takes into account the coarse resolution of the encoder only

Internal calculation, which also incorporates the factor for the motor-load side conversion, the gearbox ratio and the safety monitoring clock cycle. Result returns mm/min (linear) or rpm (rotary).

- for safety without encoder, index 1 is not relevant, and is always the value of zero.

## 2 Parameters

### 2.2 List of parameters

- Dependency:** For SLS:  $r9733[0] = p9531[x] \times p9533$  (converted from the load side to the actuator side)  
For SDI negative:  $r9733[0] = 0$   
For SLS:  $r9733[1] = -p9531[x] \times p9533$  (converted from the load side to the actuator side)  
For SDI positive:  $r9733[1] = 0$   
[x] = Selected SLS stage  
Conversion factor from the actuator side to the load side:  
- actuator = rotary and axis type = linear:  $p9522 / (p9521 \times p9520)$   
- otherwise:  $p9522 / p9521$   
Refer to: p9531, p9533
- Notice:** If  $p1051 = r9733[0]$  is interconnected,  $p1052 = r9733[1]$  must also be interconnected and vice versa.  
If only the absolute value of the setpoint velocity limiting is required,  $r9733[2]$  must be interconnected.
- Note:** If the "SLS" or "SDI" function is not selected,  $r9733[0]$  shows  $p1082$  and  $r9733[1]$  shows  $-p1082$ .  
The display in  $r9733$  can be delayed by up to one Safety monitoring clock cycle as compared to the display in  $r9719/r9720$  and  $r9721/r9722$ .

|   | - [m/min]  | - [m/min]  | - [m/min]                                 |  |
| <b>Description:</b>                                 | Displays the necessary setpoint speed limit as a result of the selected motion monitoring functions.<br>Contrary to the parameterization of the SI limit values, this parameter specifies the motor-side limit value and not the load-side limit value.  |  |   |  |
| <b>Recommendation:</b>                              | For the ramp-function generator, by appropriately interconnecting the speed limits p1051 and p1052 with r9733[0, 1], a drive-based setpoint velocity limiting can be realized.<br>- CI: p1051 = r9733[0]<br>- CI: p1052 = r9733[1]<br>Additional limiting can also be activated using connector input p1085 and p1088.   |  |   |  |
| <b>Index:</b>                                       | [0] = Setpoint limiting positive<br>[1] = Setpoint limiting negative<br>[2] = Setpoint limit absolute  |  |   |  |
| <b>Dependency:</b>                                  | For SLS: r9733[0] = p9531[x] x p9533 (converted from the load side to the motor side)<br>For SDI negative: r9733[0] = 0<br>For SLS: r9733[1] = - p9531[x] x p9533 (converted from the load side to the motor side)<br>For SDI positive: r9733[1] = 0<br>[x] = Selected SLS stage<br>Conversion factor from the motor side to the load side:<br>- motor type = rotary and axis type = linear: p9522 / (p9521 x p9520)<br>- otherwise: p9522 / p9521<br>Refer to: p9531, p9533 |  |   |  |
| <b>Notice:</b>                                      | If p1051 = r9733[0] is interconnected, p1052 = r9733[1] must also be interconnected and vice versa.<br>If only the absolute value of the setpoint velocity limiting is required, r9733[2] must be interconnected.  |  |   |  |
| <b>Note:</b>  | The unit changeover between linear and rotary axis is not implemented via the safety changeover (p9502) but by the linear motor changeover.<br>If the "SLS" or "SDI" function is not selected, r9733[0] shows p1082 and r9733[1] shows -p1082.<br>The display in r9733 can be delayed by up to one Safety monitoring clock cycle as compared to the display in r9719/r9720 and r9721/r9722.<br>When selecting SOS or a STOP A ... D, setpoint 0 is specified in r9733.       |  |   |  |

## 2 Parameters

### 2.2 List of parameters

Bits 20, 19, 18, 17, 16 = 0, 1, 1, 0, 1 --> PROFIdrive message class 13: infeed unit faulted  
 Bits 20, 19, 18, 17, 16 = 0, 1, 1, 1, 0 --> PROFIdrive message class 14: braking controller/Braking Module faulted  
 Bits 20, 19, 18, 17, 16 = 0, 1, 1, 1, 1 --> PROFIdrive message class 15: line filter faulted  
 Bits 20, 19, 18, 17, 16 = 1, 0, 0, 0, 0 --> PROFIdrive message class 16: external measured value/signal state outside the permissible range  
 Bits 20, 19, 18, 17, 16 = 1, 0, 0, 0, 1 --> PROFIdrive message class 17: application/technology function faulted  
 Bits 20, 19, 18, 17, 16 = 1, 0, 0, 1, 0 --> PROFIdrive message class 18: error in the parameterization/configuration/commissioning sequence  
 Bits 20, 19, 18, 17, 16 = 1, 0, 0, 1, 1 --> PROFIdrive message class 19: general drive fault  
 Bits 20, 19, 18, 17, 16 = 0, 1, 1, 0, 0 --> PROFIdrive message class 20: auxiliary unit faulted

#### p9752

#### SI message cases counter / SI msg\_cases count

|                     | 24  | SLA filtering and fine resolution, SS2ESR supported  | Yes  | No              | -         |
| <b>Dependency:</b>  | Refer to: r9871   |  |  |                 |           |

## 2 Parameters

### 2.2 List of parameters

**Note:**

- CU: Control Unit
- ESR: Extended Stop and Retract
- SCA: Safe Cam
- SCC: Safety Control Channel
- SDI: Safe Direction (safe motion direction)
- SI: Safety Integrated
- SLA: Safely-Limited Acceleration
- SLP: Safely-Limited Position
- SP: Safe Position
- SS1: Safe Stop 1
- SS1E: Safe Stop 1 External (Safe Stop 1 with external stop)
- SS2E: Safe Stop 2 External (Safe Stop 2 with external stop, external STOP D)
- SS2ESR: Safe Stop 2 Extended Stop and Retract
- SSM: Safe Speed Monitor (safety-related feedback signal from the speed monitoring) / SGA n < nx: Safety-related output n < nx
- STO: Safe Torque Off / SH: Safe standstill
- For bit 16:  
SS1E is supported for Safety Extended Functions.

| 22 | SCA, deactivation SOS/SLS during an external STOP A       | Yes | No | - |
| 23 | Synchronous safe position and SLA via PROFIsafe supported | Yes | No | - |
| 24 | SLA filtering and fine resolution, SS2ESR supported       | Yes | No | - |

**Dependency:**

Refer to: r9871

**Note:**

CU: Control Unit

ESR: Extended Stop and Retract

SBC: Safe Brake Control

SBR: Safe Brake Ramp (safe brake ramp monitoring)

SCA: Safe Cam

SCC: Safety Control Channel

SDI: Safe Direction (safe motion direction)

SI: Safety Integrated

SLA: Safely-Limited Acceleration

SLP: Safely-Limited Position

SLS: Safely-Limited Speed / SG: Safely reduced speed

SOS: Safe Operating Stop / SBH: Safe operating stop

SP: Safe Position

SS1: Safe Stop 1

SS1E: Safe Stop 1 External (Safe Stop 1 with external stop)

SS2E: Safe Stop 2 External (Safe Stop 2 with external stop, external STOP D)

SS2ESR: Safe Stop 2 Extended Stop and Retract

SSM: Safe Speed Monitor (safety-related feedback signal from the speed monitoring) / SGA n &lt; nx: Safety-related output n &lt; nx

STO: Safe Torque Off / SH: Safe standstill

For bit 16:

SS1E is supported for Safety Extended Functions.

## 2 Parameters

### 2.2 List of parameters

|    |   |     |    |   |
|----|---|-----|----|---|
| 21 | STO cause selection on other monitoring channel       | Yes | No | - |
| 22 | SS1 cause selection terminal (Basic Functions)        | Yes | No | - |
| 23 | SS1 cause selection PROFIsafe/TM54F (Basic Functions) | Yes | No | - |

**Dependency:**

Refer to: r9872

**Note:**

For bit 00:

When STO or "Safe power inhibit" is selected, the cause is displayed in bits 16 ... 21.

For bit 01:

- For p9772.1 = 1 and p9772.19 = 0, an STO from the Safety Basic functions is active.

- For p9772.1 = 1 and p9772.19 = 1, safe power inhibit is active, if safety functions without selection are activated via p9601.2/p9801.2 = 1 and p9601.5/p9801.5 = 1.

Note:

If p9601.0 = 1 and p9601.2 = 1 and p9801.5 = 1 then for bit 0 and 1, the STO function applies.

For bit 05:

When SS1 is selected, the cause is displayed in bits 22 and 23.

For bit 18:

When the bit is set, STO is selected via PROFIsafe or Terminal Module 54F (TM54F).

For bit 19:

With SMM with encoder no actual value sensing is possible on account of parking.

For Safety functions without selection, safe power inhibit to selected (p9772.19 = 1).

SMM: Safe Motion Monitoring

For bit 22 and 23:

These bits show via which path the SS1 has been triggered, i.e. what has started the SS1 delay time.

If the SS1 delay time is not started (e.g. because an STO is triggered at the same time), neither of the two bits is set.

| 22 | SS1 cause selection terminal (Basic Functions)        | Yes | No | - |
| 23 | SS1 cause selection PROFIsafe/TM54F (Basic Functions) | Yes | No | - |

**Dependency:**

Refer to: r9872

**Note:**

For bit 00:

When STO or "Safe pulse cancellation" is selected, the cause is displayed in bits 16 ... 21.

For bit 01:

- For p9772.1 = 1 and p9772.19 = 0, an STO from the Safety Basic functions is active.

- For p9772.1 = 1 and p9772.19 = 1, safe pulse cancellation is active, if safety functions without selection are activated via p9601.2/p9801.2 = 1 and p9601.5/p9801.5 = 1.

Note:

If p9601.0 = 1 and p9601.2 = 1 and p9801.5 = 1 then for bit 0 and 1, the STO function applies.

For bit 05:

When SS1 is selected, the cause is displayed in bits 22 and 23.

For bit 18:

When the bit is set, STO is selected via PROFIsafe or Terminal Module 54F (TM54F).

For bit 19:

With SMM encoderless no actual value sensing is possible on account of OFF2.

With SMM with encoder no actual value sensing is possible on account of parking.

For Safety functions without selection, safe pulse cancellation to selected (p9772.19 = 1).

SMM: Safe Motion Monitoring

For bit 22 and 23:

These bits show via which path the SS1 has been triggered, i.e. what has started the SS1 delay time.

If the SS1 delay time is not started (e.g. because an STO is triggered at the same time), neither of the two bits is set.

**Description:** Display and BICO output for the Safety Integrated status of the group to which this drive belongs.  
These signals are an AND logic operation of the individual status signals of the drives included in this group.

| Bit field: | Bit | Signal name   | 1 signal | 0 signal | FP   |
|------------|-----|---|----------|----------|------|
|            | 00  | STO selected in group                               | Yes      | No       | 2804 |
|            | 01  | STO active in group                                 | Yes      | No       | 2804 |
|            | 02  | SS1 delay time active in group                      | Yes      | No       | -    |
|            | 04  | SBC requested in group                              | Yes      | No       | 2804 |
|            | 05  | SS1 selected in group (Basic Functions)             | Yes      | No       | -    |
|            | 06  | SS1 active in group (Basic Functions)               | Yes      | No       | -    |
|            | 31  | Switch-off signal paths of the group must be tested | Yes      | No       | 2804 |

**Dependency:** Refer to: p9620, r9773

**Notice:** If a drive belonging to a group is deactivated via p0105, then the signals in r9774 can no longer be correctly displayed (Remedy: Before deactivating, remove this drive from the group).

**Note:** A group is formed by appropriately grouping the terminals for the function "Safe Torque Off" (STO).  
The status of a group of n drives is, for drives 1 to n - 1 displayed with a delay of one monitoring clock cycle; this is a system-related effect.

**Description:** Sets the additional field-generating current for synchronous motors with sensorless actual value sensing. The set value is referred to p0305. This parameter ensures a "base load" for the motor. The value must fulfill the following condition:  
|p0305 x p9783| >= p9588 x 1.2

**Dependency:** Refer to: p9588  
Refer to: C01711

**Notice:** Reducing this percentage value can adversely affect actual value sensing with synchronous motors. If the value is increased, this results in an increased motor power loss.

**Note:** This parameter is only effective for encoderless actual value sensing (p9506/p9306 = 1, 3).  
For p9783 = maximum value, current injection is deactivated.  
Current injection is not effective in the U/f control mode.

**Description:** Sets the enable signals for the safety functions integrated in the drive and the type of selection on the Hydraulic Module.

The following settings are permitted:

0000 hex:  
Safety functions integrated in the drive inhibited (no safety function).

0001 hex:  
Basic functions are enabled via onboard terminals (permissible for r9871.0 = 1).

0004 hex:  
Extended functions via Terminal Module 54F (TM54F) have been enabled (permissible for r9871.5 = 1).

0005 hex:  
Extended functions via Terminal Module 54F (TM54F) and the basic functions via onboard terminals have been enabled (permissible for r9871.5 = 1).

0008 hex:  
Basic functions are enabled via PROFIsafe (permissible for r9871.6 = 1).

0009 hex:  
Basic functions are enabled via PROFIsafe onboard terminals (permissible for r9871.6 = 1).

000C hex:  
Extended functions are enabled via PROFIsafe (permissible for r9871.4 = 1).

000D hex:  
Extended functions are enabled via PROFIsafe and basic functions via onboard terminals (permissible for r9871.4 = 1).

0024 hex:  
Extended functions without selection are enabled (permissible for r9871.16 = 1).

0025 hex:  
Extended functions without selection and basic functions via onboard terminals are enabled (permissible for r9871.16 = 1).

0040 hex:  
Basic functions are enabled via TM54F

0041 hex:  
Basic functions are enabled via TM54F and onboard terminals.

| <b>Bit field:</b> | <b>Bit</b> | <b>Signal name</b>   | <b>1 signal</b> | <b>0 signal</b> | <b>FP</b> |

**Description:** Sets the enable signals for the safety functions integrated in the drive and the type of selection on the Motor Module. Not all of the settings listed below will be permissible, depending on the Control Unit and Motor Module or Power Module being used:

0000 hex:

Safety functions integrated in the drive inhibited (no safety function).

0001 hex:

Basic functions are enabled via onboard terminals (permissible for r9871.0 = 1).

0004 hex:

Extended functions via Terminal Module 54F (TM54F) have been enabled (permissible for r9871.5 = 1).

0005 hex:

Extended functions via Terminal Module 54F (TM54F) and the basic functions via onboard terminals have been enabled (permissible for r9871.5 = 1).

0008 hex:

Basic functions are enabled via PROFIsafe (permissible for r9871.6 = 1).

0009 hex:

Basic functions are enabled via PROFIsafe onboard terminals (permissible for r9871.6 = 1).

000C hex:

Extended functions are enabled via PROFIsafe (permissible for r9871.4 = 1).

000D hex:

Extended functions are enabled via PROFIsafe and basic functions via onboard terminals (permissible for r9871.4 = 1).

0014 hex:

Extended functions via integrated F-DI/F-DO have been enabled.

0024 hex:

Extended functions without selection are enabled (permissible for r9871.16 = 1).

0025 hex:

Extended functions without selection and basic functions via onboard terminals are enabled (permissible for r9871.16 = 1).

0040 hex:

Basic functions are enabled via TM54F

0041 hex:

Basic functions are enabled via TM54F and onboard terminals.

## 2 Parameters

### 2.2 List of parameters

| Bit field: | Bit | Signal name  | 1 signal     | 0 signal        | FP   |
|------------|-----|--|--------------|-----------------|------|
|            | 00  | STO (SH) via terminals (MM) enable                               | Enable       | Inhibit         | 2810 |
|            | 02  | Enable motion monitoring functions integrated in drive (MM)      | Enable       | Inhibit         | -    |
|            | 03  | Enable PROFIsafe (MM)  | Enable       | Inhibit         | -    |
|            | 04  | Enable onboard F-DI  | Onboard F-DI | F-DI with TM54F | -    |
|            | 05  | Enab motion monit functions integr in drive w/out selection (MM) | Enable       | Inhibit         | -    |
|            | 06  | Basic functions via TM54F  | Enable       | Inhibit         | -    |

**Dependency:** Refer to: p9601, r9871

**Notice:** This parameter is overwritten by the copy function of the safety functions integrated in the drive.

**Note:** A change only becomes effective only after a POWER ON. Exception: Changes to p9801.0 become effective immediately.

MM: Motor Module

SI: Safety Integrated

SMM: Safe Motion Monitoring

STO: Safe Torque Off / SH: Safe standstill

SS1: Safe Stop 1

F-DI: Failsafe Digital Input

F-DO: Failsafe Digital Output

**Description:** Sets the enable signals for the safety functions integrated in the drive and the type of selection on the Motor Module. Not all of the settings listed below will be permissible, depending on the Control Unit and Motor Module or Power Module being used:

0000 hex:

Safety functions integrated in the drive inhibited (no safety function).

0001 hex:

Basic functions are enabled via onboard terminals (permissible for r9871.0 = 1).

0004 hex:

Extended functions via Terminal Module 54F (TM54F) have been enabled (permissible for r9871.5 = 1).

0005 hex:

Extended functions via Terminal Module 54F (TM54F) and the basic functions via onboard terminals have been enabled (permissible for r9871.5 = 1).

0008 hex:

Basic functions are enabled via PROFIsafe (permissible for r9871.6 = 1).

0009 hex:

Basic functions are enabled via PROFIsafe onboard terminals (permissible for r9871.6 = 1).

000C hex:

Extended functions are enabled via PROFIsafe (permissible for r9871.4 = 1).

000D hex:

Extended functions are enabled via PROFIsafe and basic functions via onboard terminals (permissible for r9871.4 = 1).

0024 hex:

Extended functions without selection are enabled (permissible for r9871.16 = 1).

0025 hex:

Extended functions without selection and basic functions via onboard terminals are enabled (permissible for r9871.16 = 1).

0040 hex:

Basic functions are enabled via TM54F

0041 hex:

Basic functions are enabled via TM54F and onboard terminals.

| Bit field: | Bit | Signal name  | 1 signal | 0 signal | FP   |
|------------|-----|--|----------|----------|------|
|            | 00  | STO (SH) via terminals (MM) enable                               | Enable   | Inhibit  | 2810 |
|            | 02  | Enable motion monitoring functions integrated in drive (MM)      | Enable   | Inhibit  | -    |
|            | 03  | Enable PROFIsafe (MM)  | Enable   | Inhibit  | -    |
|            | 05  | Enab motion monit functions integr in drive w/out selection (MM) | Enable   | Inhibit  | -    |
|            | 06  | Basic functions via TM54F  | Enable   | Inhibit  | -    |

**Dependency:** Refer to: p9601, r9871

**Notice:** This parameter is overwritten by the copy function of the safety functions integrated in the drive.

**Note:** A change only becomes effective only after a POWER ON. Exception: Changes to p9801.0 become effective immediately.

MM: Motor Module

SI: Safety Integrated

SMM: Safe Motion Monitoring

STO: Safe Torque Off / SH: Safe standstill

SS1: Safe Stop 1

F-DI: Failsafe Digital Input

F-DO: Failsafe Digital Output

**Description:** Sets the enable signal for the "Safe Brake Control" function (SBC) on the Motor Module.

0: Inhibit SBC

1: Enable SBC

**Dependency:** Refer to: p9602

**Notice:** This parameter is overwritten by the copy function of the safety functions integrated in the drive.

**Note:** The "Safe Brake Control" function is not activated until at least one safety monitoring function has been enabled (i.e. p9501 not equal to 0 and/or p9801 not equal to 0).

It does not make sense to parameterize "no motor holding brake available" and enable "Safe Brake Control" (p1215 = 0, p9602 = p9802 = 1) if there is no motor holding brake.

The parameterization "motor holding brake the same as sequence control, connection via BICO" and "Safe Brake Control" enabled (p1215 = 3, p9602 = 1, p9802 = 1) is not practical.

The parameterization "motor holding brake without feedback signals" and "Safe Brake Control" enabled (p1278 = 1, p9602 = 1, p9802 = 1) is not permissible.

MM: Motor Module

SBC: Safe Brake Control

SI: Safety Integrated

| SERVO, VECTOR,<br>HLA, SERVO_AC,<br>VECTOR_AC,<br>SERVO_I_AC,<br>VECTOR_I_AC | <b>Can be changed:</b> C2(95)<br><b>Data type:</b> FloatingPoint32<br><b>P-Group:</b> Safety Integrated<br><b>Not for motor type:</b> -<br><b>Min</b><br>0.00 [µs]  | <b>Calculated:</b> -<br><b>Dyn. index:</b> -<br><b>Unit group:</b> -<br><b>Scaling:</b> -<br><b>Max</b><br>2000000.00 [µs] | <b>Access level:</b> 3<br><b>Func. diagram:</b> 2810<br><b>Unit selection:</b> -<br><b>Expert list:</b> 1<br><b>Factory setting</b><br>500000.00 [µs] |
| <b>Description:</b>  | Sets the discrepancy time to change over the safety-related inputs (SGE) on the Motor Module/Hydraulic Module. An SGE changeover is not effective simultaneously due to the different runtimes in the two monitoring channels. After an SGE changeover, dynamic data is not subject to a data cross-check during this discrepancy time. |  |   |
| <b>Dependency:</b>   | Refer to: p9650   |  |   |
| <b>Notice:</b>   | This parameter is overwritten by the copy function of the safety functions integrated in the drive.   |  |   |
| <b>Note:</b>   | For a data cross-check between p9650 and p9850, a difference of one Safety monitoring clock cycle is tolerated. Rounding effects can occur in the last decimal place of the parameterized time. The set time is rounded internally to an integer multiple of the monitoring clock cycle. SGE: Safety-related input (e.g. STO terminals) |  |   |

|  | 0.00 [ $\mu$ s]   | 30000000.00 [ $\mu$ s] | 0.00 [ $\mu$ s]            |
| <b>Description:</b>  | Sets the transition period from STOP F to STOP A on the Motor Module/Hydraulic Module.  |                        |                            |
| <b>Dependency:</b>   | Refer to: p9658, r9895<br>Refer to: F30611  |                        |                            |
| <b>Notice:</b>   | This parameter is overwritten by the copy function of the safety functions integrated in the drive.   |                        |                            |

**Note:** For a data cross-check between p9658 and p9858, a difference of one safety monitoring clock cycle is tolerated. Rounding effects can occur in the last decimal place of the parameterized time. The set time is rounded internally to an integer multiple of the monitoring clock cycle. If a higher-level control responds to a drive fault by withdrawing the controller enable signals, for faults F01611 and F30611, the message type must be changed to alarm (p2118, p2119). As a consequence, the drive can still be braked in a controlled fashion during this delay time. STOP F: Defect in a monitoring channel (error in the data cross-check) STOP A: STO as a result of a fault detected by Safety Integrated

## 2 Parameters

### 2.2 List of parameters

|    |   |     |    |   |
|----|---|-----|----|---|
| 23 | Synchronous safe position and SLA via PROFIsafe supported | Yes | No | - |
| 24 | SLA filtering and fine resolution, SS2ESR supported       | Yes | No | - |

**Dependency:**

Refer to: r9771

**Note:**

ESR: Extended Stop and Retract  
 MM: Motor Module  
 SBC: Safe Brake Control  
 SBR: Safe Brake Ramp (safe brake ramp monitoring)  
 SCA: Safe Cam  
 SCC: Safety Control Channel  
 SDI: Safe Direction (safe motion direction)  
 SI: Safety Integrated  
 SLA: Safely-Limited Acceleration  
 SLP: Safely-Limited Position  
 SLS: Safely-Limited Speed / SG: Safely reduced speed  
 SOS: Safe Operating Stop / SBH: Safe operating stop  
 SP: Safe Position  
 SS1: Safe Stop 1  
 SS1E: Safe Stop 1 External (Safe Stop 1 with external stop)  
 SS2E: Safe Stop 2 External (Safe Stop 2 with external stop, external STOP D)  
 SS2ESR: Safe Stop 2 Extended Stop and Retract  
 SSM: Safe Speed Monitor (safety-related feedback signal from the speed monitoring) / SGA n < nx: Safety-related output n < nx  
 STO: Safe Torque Off / SH: Safe standstill  
 For bit 16:  
 SS1E is supported for Safety Extended Functions.

| 13  | ESR delay of the pulse suppression                             | Yes      | No       | -    |
| 14  | SBC for parallel connection supported                          | Yes      | No       | -    |
| 15  | SLS limit SP supported via PROFIsafe                           | Yes      | No       | -    |

|    |   |     |    |   |
|----|---|-----|----|---|
| 16 | Safety functions without selection, SLP, SS1E supported   | Yes | No | - |
| 17 | Safe gearbox stage switchover ref supported via SCC       | Yes | No | - |
| 18 | Controlling Basic Functions with TM54F                    | Yes | No | - |
| 20 | STOP B for PROFIsafe failure supported                    | Yes | No | - |
| 21 | SBR with encoder and SS2E supported                       | Yes | No | - |
| 22 | SCA, deactivation SOS/SLS during an external STOP A       | Yes | No | - |
| 23 | Synchronous safe position and SLA via PROFIsafe supported | Yes | No | - |
| 24 | SLA filtering and fine resolution, SS2ESR supported       | Yes | No | - |

**Dependency:**

Refer to: r9771

**Note:**

ESR: Extended Stop and Retract

MM: Motor Module

SBC: Safe Brake Control

SBR: Safe Brake Ramp (safe brake ramp monitoring)

SCA: Safe Cam

SCC: Safety Control Channel

SDI: Safe Direction (safe motion direction)

SI: Safety Integrated

SLA: Safely-Limited Acceleration

SLP: Safely-Limited Position

SLS: Safely-Limited Speed / SG: Safely reduced speed

SOS: Safe Operating Stop / SBH: Safe operating stop

SP: Safe Position

SS1: Safe Stop 1

SS1E: Safe Stop 1 External (Safe Stop 1 with external stop)

SS2E: Safe Stop 2 External (Safe Stop 2 with external stop, external STOP D)

SS2ESR: Safe Stop 2 Extended Stop and Retract

SSM: Safe Speed Monitor (safety-related feedback signal from the speed monitoring) / SGA n &lt; nx: Safety-related output n &lt; nx

STO: Safe Torque Off / SH: Safe standstill

For bit 16:

SS1E is supported for Safety Extended Functions.

## 2 Parameters

### 2.2 List of parameters

|    |   |      |     |   |
|----|---|------|-----|---|
| 18 | STO cause: selection via SMM                          | Yes  | No  | - |
| 20 | STO cause selection PROFIsafe/TM54F (Basic Functions) | Yes  | No  | - |
| 21 | STO cause selection on other monitoring channel       | Yes  | No  | - |
| 22 | SS1 cause selection terminal (Basic Functions)        | Yes  | No  | - |
| 23 | SS1 cause selection PROFIsafe/TM54F (Basic Functions) | Yes  | No  | - |
| 25 | Shutoff valve feedback signal contact DI0             | High | Low | - |
| 26 | Shutoff valve feedback signal contact DI1             | High | Low | - |

**Dependency:**

Refer to: r9772

**Notice:**

If communication between both monitoring channels is interrupted (e.g. by switching off the power unit), this display parameter is no longer updated. The last transferred status of the Motor Module/Hydraulic Module is displayed.

**Note:**

For bit 00:

When STO is selected, the cause is displayed in bits 16 ... 21.

For bit 05:

When SS1 is selected, the cause is displayed in bits 22 and 23.

For bit 18:

When the bit is set, STO is selected via PROFIsafe or Terminal Module 54F (TM54F).

SMM: Safe Motion Monitoring

For bit 22, 23:

These bits show via which path the SS1 was triggered, i.e. what has started the SS1 delay time.

If the SS1 delay time is not started (e.g. because an STO is triggered at the same time), neither of the two bits is set.

For bit 25, 26:

DI 0 (X281.3/X282.3, axis 1/2)

DI 1 (X281.2/X282.2, axis 1/2)

## 2 Parameters

### 2.2 List of parameters

**Note:** The electronic rating plate comprises the following data:

- component type (e.g. "SMC20")
- article number (e.g. "6SL3055-0AA0-5BA0")
- manufacturer (e.g. SIEMENS)
- hardware version (e.g. "A")
- Serial No. (e.g. "T-P30050495")

When comparing the topology, the following data is compared in the target and actual topologies:

p9908 = 0: Component type, Article No., Hardware version, Manufacturer, Serial No.

p9908 = 1: Component type, Article Number

p9908 = 2: Component type

p9908 = 3: Component class (e.g. Sensor Module or Motor Module)

#### p9909

#### Description:

For p9909 = 1, the serial number and the hardware version of the new replaced component is automatically transferred from the actual topology into the target topology and then saved in a non-volatile fashion.

For the components that have been replaced, the electronic rating plate must match as far as the following data is concerned:

- component type (e.g. "SMC20")
- article number (e.g. "6SL3055-0AA0-5BA0")

For p9909 = 0, serial numbers and hardware versions are not automatically transferred. In this case, the transfer must be made using p9904.

#### Dependency:

Refer to: p9904, p9905

#### Note:

The modified target topology is automatically saved in a non-volatile fashion when the drive object runs-up (e.g. after a POWER ON).

Special case for Control Unit and option slot modules:

When replacing these components, independent of p9909, the serial number and hardware version are automatically transferred and saved in a non-volatile fashion.

**Dependency:** Refer to: r7901, r9976, r9979

Refer to: F01054

**Note:** The corresponding sampling times can be read out in parameter r7901.

Net utilization:

Computing time load that is only called by the sampling time involved.

Total utilization:

Computing time load of sampling time involved including load from higher-priority sampling times (interrupts).

**Description:** Selects an input terminal to start the test stop.  
The test stop is started with a 0/1 signal at the input terminal - and is then only possible if the drive is not in commissioning mode.

**Dependency:** Refer to: p10001, p10002, p10003, p10040, p10046

**Description:** Sets the signal source to initiate the test stop.  
For example, a digital input of the Control Unit or one of the other Terminal Modules can be set as signal source.  
The test stop is triggered by a 0/1 signal edge.  
The TM54F must be in the "ready" state (p0010 = 0).

**Dependency:** Refer to: p10001, p10003, p10041, p10046

**Notice:** Digital inputs of the TM54F may not be used to trigger the test stop.

## 2 Parameters

### 2.2 List of parameters

**Note:**

- retraction is only possible if SDI is not already selected in the opposite direction of the permitted position range.
- a discrepancy at this F-DI must be acknowledged using a safe acknowledgment.

F-DI: Failsafe Digital Input  
SDI: Safe Direction (safe motion direction)  
SLP: Safely-Limited Position

| TM54F_MA,<br>TM54F_SL | <b>Can be changed:</b> C2(95)   | <b>Calculated:</b> - | <b>Access level:</b> 3   |
|                       | <b>Data type:</b> FloatingPoint32   | <b>Dyn. index:</b> - | <b>Func. diagram:</b> -  |
|                       | <b>P-Group:</b> Safety Integrated   | <b>Unit group:</b> - | <b>Unit selection:</b> - |
|                       | <b>Not for motor type:</b> -  | <b>Scaling:</b> -    | <b>Expert list:</b> 1    |
|                       | <b>Min</b>  | <b>Max</b>           | <b>Factory setting</b>   |
|                       | 1.00 [ms]   | 100.00 [ms]          | 1.00 [ms]                |
| <b>Description:</b>   | <p>Sets the debounce time for digital inputs.</p> <p>The debounce time is accepted rounded off to whole milliseconds.</p> <p>The debounce time acts on the following digital inputs:</p> <ul style="list-style-type: none"> <li>- Failsafe digital inputs (F-DI).</li> <li>- Single-channel digital inputs (DI).</li> </ul> |                      |                          |

**Notice:** To filter noise pulses or test impulses from F-DOs, there is the following dependency on the parameter p0799[0]:  
 - if p0799[0] is less than 1 ms, then p10017 = 1 ms or a multiple integer of 1 ms.  
 - if p0799[0] is greater or equal to 1 ms, then p10017 must = p0799[0] - or must be a multiple integer of p0799[0].

**Note:** Example:  
 Debounce time = 1 ms: Fault pulses of 1 ms are filtered; only pulses longer than 2 ms are processed.  
 Debounce time = 3 ms: Fault pulses of 3 ms are filtered; only pulses longer than 4 ms are processed.  
 The debounce result can be read in r10051.  
 The set debounce time impacts the response time of the safety function.

## 2 Parameters

### 2.2 List of parameters

**Note:** Parameter being prepared. For this firmware version, the function interface is not supported.  
 If value = 0:  
 No terminal assigned, no static agreement.  
 If value = 255:  
 No terminal assigned, static agreement.  
 F-DI: Failsafe Digital Input

**Description:** Sets the failsafe digital input (F-DI) for the "Emergency Stop" function (operating mode "function interface").  
 The behavior of this input signal is set in p10021.

**Value:**

|      |                     |
|------|---------------------|
| 0:   | Static selected     |
| 1:   | F-DI 0 (X521.2/3/6) |
| 2:   | F-DI 1 (X521.4/5/7) |
| 3:   | F-DI 2 (X522.1/2/7) |
| 4:   | F-DI 3 (X522.3/4/8) |
| 5:   | F-DI 4 (X522.5/6/9) |
| 6:   | F-DI 5 (X531.2/3/6) |
| 7:   | F-DI 6 (X531.4/5/7) |
| 8:   | F-DI 7 (X532.1/2/7) |
| 9:   | F-DI 8 (X532.3/4/8) |
| 10:  | F-DI 9 (X532.5/6/9) |
| 255: | Static deselected   |

**Index:**

|     |                 |
|-----|-----------------|
| [0] | = Drive group 1 |
| [1] | = Drive group 2 |
| [2] | = Drive group 3 |
| [3] | = Drive group 4 |

**Dependency:** Refer to: p10008, p10021

**Note:** Parameter being prepared. For this firmware version, the function interface is not supported.  
 If value = 0:  
 No terminal assigned, "Emergency Stop" statically selected.  
 If value = 255:  
 No terminal assigned, no "Emergency Stop" statically deselected.  
 F-DI: Failsafe Digital Input

**Description:** Sets the signal sources for F-DO 3.  
 The 6 signal sources in p10045[0...5] are AND'ed and the result is output at F-DO 3.

| <b>Dependency:</b>                                    | Refer to: p9501, p9601, p10017, p10040, p10050, r10151  |   |                          |                 |           |

**Note:** If a safety function is assigned to an input (e.g. via p10022), then the following applies:

- logical "0": Safety function is selected
- logical "1": Safety function is deselected

The relationship between the logic level and the external voltage level at the input depends on the parameterization (see p10040) of the input as NC contact or NO contact, and is aligned to the use of a safety function:

With 24 V at the input, NC contacts have a logical "1" level, for 0 V at the input, a logical "0" level.

This means that an NC/NC contact parameterization of 0 V at both inputs of the F-DI selects the safety function, for 24 V at both inputs, deselected the safety function.

With 24 V at the input, NO contacts have a logical "0" level, for 0 V at the input, a logical "1" level.

This means that for an NC/NO contact parameterization, the level 0 V/24 V selects the safety function, the level 24 V/0 V deselected the safety function.

F-DI: Failsafe Digital Input

The state of parameter r10151 is delayed by one monitoring clock cycle in relation to r10051.

The parameter is only updated in the following cases:

- if the Safety Extended Functions are enabled by means of activation via F-DI.
- if transfer of the F-DIs via PROFIsafe is enabled (see p9501).

In this case only the F-DIs transferred for PROFIsafe are displayed and updated (see p10050/p10150). All F-DIs which have not been transferred have a static zero value.

|                       | 09  | F-DI 9  | Logical 1                        | Logical 0       | 2894      |

**Dependency:** Refer to: p10017, p10040

**Note:** If a safety function is assigned to an input (e.g. via p10022), then the following applies:

- logical "0": Safety function is selected
- logical "1": Safety function is deselected

The relationship between the logic level and the external voltage level at the input depends on the parameterization (see p10040) of the input as NC contact or NO contact, and is aligned to the use of a safety function:

With 24 V at the input, NC contacts have a logical "1" level, for 0 V at the input, a logical "0" level.

This means that an NC/NC contact parameterization of 0 V at both inputs of the F-DI selects the safety function, for 24 V at both inputs, deselected the safety function.

With 24 V at the input, NO contacts have a logical "0" level, for 0 V at the input, a logical "1" level.

This means that for an NC/NO contact parameterization, the level 0 V/24 V selects the safety function, the level 24 V/0 V deselected the safety function.

F-DI: Failsafe Digital Input

0.00 [ms]

100.00 [ms]

1.00 [ms]

**Description:**

Sets the debounce time for digital inputs.

The debounce time acts on the following digital inputs:

- Failsafe digital inputs (F-DI).

- Single-channel digital input 22 (DI 22, read back input for the forced checking procedure).

The debounce time is accepted rounded off to whole milliseconds.

**Dependency:**

Refer to: p10017

**Note:**

Example:

Debounce time = 1 ms: Fault pulses of 1 ms are filtered; only pulses longer than 2 ms are processed.

Debounce time = 3 ms: Fault pulses of 3 ms are filtered; only pulses longer than 4 ms are processed.

The debounce result can be read in r10151.

| <b>Description:</b>                                   | Display and BICO output for the single-channel debounced status of digital inputs DI 17, DI 19 and DI 21.   |                      |                          |                 |
| <b>Bit field:</b>                                     | <b>Bit</b>  | <b>Signal name</b>   | <b>1 signal</b>          | <b>0 signal</b> |
|   | 00  | F-DI 0 processor 2   | High                     | Low             |
|   | 01  | F-DI 1 processor 2   | High                     | Low             |
|   | 02  | F-DI 2 processor 2   | High                     | Low             |
| <b>Dependency:</b>                                    | Refer to: p9501, p9601, p10117, p10140, p10150  |                      |                          |                 |
| <b>Note:</b>  | F-DI: Failsafe Digital Input  |                      |                          |                 |
|   | If a safety function is assigned to an input (e.g. via p10122), then the following applies:   |                      |                          |                 |
|   | - logical "0": Safety function is selected  |                      |                          |                 |
|   | - logical "1": Safety function is deselected  |                      |                          |                 |
|   | The relationship between the logic level and the external voltage level at the input depends on the parameterization (see p10140) of the input as NC contact or NO contact, and is aligned to the use of a safety function: |                      |                          |                 |
|   | With 24 V at the input, NC contacts have a logical "1" level, for 0 V at the input, a logical "0" level.  |                      |                          |                 |
|   | This means that an NC/NC contact parameterization of 0 V at both inputs of the F-DI selects the safety function, for 24 V at both inputs, deselected the safety function.   |                      |                          |                 |
|   | With 24 V at the input, NO contacts have a logical "0" level, for 0 V at the input, a logical "1" level.  |                      |                          |                 |
|   | This means that for an NC/NO contact parameterization, the level 0 V/24 V selects the safety function, the level 24 V/0 V deselected the safety function.   |                      |                          |                 |
|   | The state of parameter r10151 is delayed by one monitoring clock cycle in relation to r10051.   |                      |                          |                 |
|   | The parameter is only updated in the following cases:   |                      |                          |                 |
|   | - if the Safety Extended Functions are enabled by means of activation via F-DI.   |                      |                          |                 |
|   | - if transfer of the F-DIs via PROFIsafe is enabled (see p9501).  |                      |                          |                 |
|   | In this case only the F-DIs transferred for PROFIsafe are displayed and updated (see p10050/p10150). All F-DIs which have not been transferred have a static zero value.  |                      |                          |                 |

|   |   |                        |                          |                 |

| <b>Dependency:</b>  | Refer to: p10203, p10230, p10235<br>Refer to: A01785  |                        |                          |                 |
| <b>Note:</b>  | It is not possible to test two motor holding brakes. An appropriate message is output for an incorrect parameterization.<br>The brake to be tested is selected using p10230[2] or p10235.2. |                        |                          |                 |

## 2 Parameters

### 2.2 List of parameters

---

|   |   |  |  |
|---|---|--|--|
| <b>p10203</b>   | <b>SI Motion SBT control selection / SBT control sel</b>  |  |  |
| SERVO, VECTOR,<br>SERVO_AC,<br>VECTOR_AC,<br>SERVO_I_AC,<br>VECTOR_I_AC | <b>Can be changed:</b> C2(95)<br><b>Data type:</b> Integer16<br><b>P-Group:</b> Safety Integrated<br><b>Not for motor type:</b> -<br><b>Min</b><br>0  | <b>Calculated:</b> -<br><b>Dyn. index:</b> -<br><b>Unit group:</b> -<br><b>Scaling:</b> -<br><b>Max</b><br>2 | <b>Access level:</b> 3<br><b>Func. diagram:</b> 2837<br><b>Unit selection:</b> -<br><b>Expert list:</b> 1<br><b>Factory setting</b><br>0 |
| <b>Description:</b>   | Selects the control for the safe brake test.  |  |  |
| <b>Value:</b>   | 0: SBT via SCC (p10235)<br>1: SBT via BICO (p10230)<br>2: SBT for test stop selection (p9705/p10250.8)  |  |  |
| <b>Dependency:</b>  | Refer to: p9705, p10230, p10235, p10250   |  |  |
| <b>Note:</b>  | SCC: Safety Control Channel<br>For a value = 2, the following applies:<br>Brake 1 with sequence 1 (p10210[0], p10211[0], p10212[0], p10218) is tested. Brake 1 must be configured as motor holding brake (p10202[0] = 1). |  |  |

---

|   |   |  |   |
|---|---|--|---|
| <b>p10204</b>   | <b>SI Motion SBT motor type / SBT motor type</b>  |  |   |
| SERVO, VECTOR,<br>SERVO_AC,<br>VECTOR_AC,<br>SERVO_I_AC,<br>VECTOR_I_AC | <b>Can be changed:</b> C2(95)<br><b>Data type:</b> Integer16<br><b>P-Group:</b> Safety Integrated<br><b>Not for motor type:</b> -<br><b>Min</b><br>0  | <b>Calculated:</b> -<br><b>Dyn. index:</b> -<br><b>Unit group:</b> -<br><b>Scaling:</b> -<br><b>Max</b><br>1 | <b>Access level:</b> 3<br><b>Func. diagram:</b> -<br><b>Unit selection:</b> -<br><b>Expert list:</b> 1<br><b>Factory setting</b><br>0 |
| <b>Description:</b>   | Selects the motor type for the safe brake test.   |  |   |
| <b>Value:</b>   | 0: Rotating<br>1: Linear  |  |   |
| <b>Dependency:</b>  | Refer to: F01787  |  |   |
| <b>Note:</b>  | For safety functions that are not enabled (p9501 = 0), the following applies:<br>- p10204 is automatically set the same as r0108.12 when the system boots.<br>When the safe brake test is enabled (10201.0 = 1), the following applies:<br>- p10204 is checked when the system boots to see that it matches r0108.12. |  |   |

---

|   |  |   |  |
|---|--|---|--|
| <b>p10208[0...1]</b>  | <b>SI Motion SBT test torque ramp time / SBT M_test t_ramp</b>   |   |  |
| SERVO, VECTOR,<br>SERVO_AC,<br>VECTOR_AC,<br>SERVO_I_AC,<br>VECTOR_I_AC | <b>Can be changed:</b> C2(95)<br><b>Data type:</b> FloatingPoint32<br><b>P-Group:</b> Safety Integrated<br><b>Not for motor type:</b> -<br><b>Min</b><br>20 [ms] | <b>Calculated:</b> -<br><b>Dyn. index:</b> -<br><b>Unit group:</b> -<br><b>Scaling:</b> -<br><b>Max</b><br>10000 [ms] | <b>Access level:</b> 3<br><b>Func. diagram:</b> 2836<br><b>Unit selection:</b> -<br><b>Expert list:</b> 1<br><b>Factory setting</b><br>1000 [ms] |
| <b>Description:</b>   | Sets the time, during which the test torque is ramped up against the closed brake.<br>The test torque is then ramped down after the safe brake test.             |   |  |
| <b>Index:</b>   | [0] = Brake 1<br>[1] = Brake 2   |   |  |
| <b>Note:</b>  | The set time is rounded internally to an integer multiple of the monitoring clock cycle.   |   |  |

**Note:**

SIC: Safety Information Channel

SLP: Safely-Limited Position / SE: Safe software limit switches

SS2E: Safe Stop 2 External (Safe Stop 2 with external stop, external STOP D)

SS2ESR: Safe Stop 2 Extended Stop and Retract

For bits 05, 04:

For r10234.4 = 0 signal, it is possible to make a distinction as to whether the brake test was executed with error - or has still not been executed - using bit 5.

Bit 5/4 = 0/0: The brake test has still not been executed since the last warm restart or POWER ON.

Bit 5/4 = 1/0: The last brake test that was executed had an error.

**Description:**

Displays the effective maximum test torque on the motor side for a safe brake test.

**Dependency:**

The test torque for an external brake should be converted to the load side.

Conversion factor:

- motor type = rotary and axis type = linear: (p9521 x p9520) / p9522

- otherwise: p9521 / p9522

Further, the efficiency of the mechanical system should be taken into account.

Refer to: p10210, p10220

**Note:**

The value remains displayed until the start of the next test sequence.

| <b>Description:</b>  | Sets the telegram for the Safety Information Channel (SIC) / Safety Control Channel (SCC).<br>The SIC/SCC telegram p60122 is attached directly to the PZD telegram p0922/p2079.   |                                 |                            |
| <b>Value:</b>  | 700: Suppl. telegram 700, PZD-0/3<br>701: Supplementary telegram 701, PZD-2/5<br>999: No telegram   |                                 |                            |
| <b>Dependency:</b>   | For p8864 equal to 999, then p60122 is locked.  |                                 |                            |
| <b>Note:</b>   | The clearance to the PZD telegram can be increased using p2070/p2071.<br>After changing p0922/p2079 or p2070/p2071, then p60122 must be set again.<br>The telegram interconnections can only be changed if p60122 and p0922 are both set to 999.  |                                 |                            |

## 2 Parameters

### 2.2 List of parameters

## 2.3 Parameters for data sets

### 2.3.1 Parameters for command data sets (CDS)

---

#### Note

References: SINAMICS S120 Function Manual Drive Functions  
Chapter "Data sets"

---

The following list contains the parameters that are dependent on the command data sets.

Product: SINAMICS S120/S150, Version: 5206900, Language: eng, Type: CDS

|              |  |
|--------------|--|
| p0641[0...n] | CI: Current limit scaling signal source / I_lim scal s_s             |
| p0700[0...n] | Macro Binector Input (BI) / Macro BI                                 |
| p0820[0...n] | BI: Drive Data Set selection DDS bit 0 / DDS sel, bit 0              |
| p0821[0...n] | BI: Drive Data Set selection DDS bit 1 / DDS sel, bit 1              |
| p0822[0...n] | BI: Drive Data Set selection DDS bit 2 / DDS sel, bit 2              |
| p0823[0...n] | BI: Drive Data Set selection DDS bit 3 / DDS sel, bit 3              |
| p0824[0...n] | BI: Drive Data Set selection DDS bit 4 / DDS sel, bit 4              |
| p0828[0...n] | BI: Motor changeover feedback signal / Mot_chgov fdbk sig            |
| p0840[0...n] | BI: ON / OFF (OFF1) / ON / OFF (OFF1)                                |
| p0844[0...n] | BI: No coast-down / coast-down (OFF2) signal source 1 / OFF2 s_s 1   |
| p0845[0...n] | BI: No coast-down / coast-down (OFF2) signal source 2 / OFF2 s_s 2   |
| p0848[0...n] | BI: No Quick Stop / Quick Stop (OFF3) signal source 1 / OFF3 s_s 1   |
| p0849[0...n] | BI: No Quick Stop / Quick Stop (OFF3) signal source 2 / OFF3 s_s 2   |
| p0852[0...n] | BI: Enable operation/inhibit operation / Enable operation            |
| p0854[0...n] | BI: Control by PLC/no control by PLC / Master ctrl by PLC            |
| p0855[0...n] | BI: Unconditionally release holding brake / Uncond open brake        |
| p0856[0...n] | BI: Enable speed controller / n_ctrl enable                          |
| p0856[0...n] | BI: Enable velocity controller / v_ctrl enable                       |
| p0858[0...n] | BI: Unconditionally close holding brake / Uncond close brake         |
| p1000[0...n] | Macro Connector Inputs (CI) for speed setpoints / Macro CI n_set     |
| p1000[0...n] | Macro Connector Inputs (CI) for velocity setpoints / Macro CI v_set  |
| p1020[0...n] | BI: Fixed velocity setpoint selection Bit 0 / v_set_fixed bit 0      |
| p1020[0...n] | BI: Fixed speed setpoint selection bit 0 / n_set_fixed bit 0         |
| p1021[0...n] | BI: Fixed velocity setpoint selection Bit 1 / v_set_fixed bit 1      |
| p1021[0...n] | BI: Fixed speed setpoint selection bit 1 / n_set_fixed bit 1         |
| p1022[0...n] | BI: Fixed velocity setpoint selection Bit 2 / v_set_fixed bit 2      |
| p1022[0...n] | BI: Fixed speed setpoint selection bit 2 / n_set_fixed bit 2         |
| p1023[0...n] | BI: Fixed velocity setpoint selection Bit 3 / v_set_fixed bit 3      |
| p1023[0...n] | BI: Fixed speed setpoint selection bit 3 / n_set_fixed bit 3         |
| p1035[0...n] | BI: Motorized potentiometer setpoint raise / MoP raise               |
| p1036[0...n] | BI: Motorized potentiometer lower setpoint / MoP lower               |
| p1039[0...n] | BI: Motorized potentiometer inversion / MoP inv                      |
| p1041[0...n] | BI: Motorized potentiometer manual/automatic / MoP manual/auto       |
| p1042[0...n] | CI: Motorized potentiometer automatic setpoint / MoP auto setpoint   |
| p1043[0...n] | BI: Motorized potentiometer accept setting value / MoP acc set val   |
| p1044[0...n] | CI: Motorized potentiometer setting value / MoP set val              |
| p1051[0...n] | CI: Velocity limit RFG positive direction / v_limit RFG pos          |
| p1051[0...n] | CI: Speed limit RFG positive direction of rotation / n_limit RFG pos |
| p1052[0...n] | CI: Velocity limit RFG negative direction / v_limit RFG neg          |
| p1052[0...n] | CI: Speed limit RFG negative direction of rotation / n_limit RFG neg |
| p1055[0...n] | BI: Jog bit 0 / Jog bit 0  |

## 2 Parameters

### 2.3 Parameters for data sets

|              |   |
|--------------|---|
| p1056[0...n] | BI: Jog bit 1 / Jog bit 1   |
| p1070[0...n] | CI: Main setpoint / Main setpoint   |
| p1071[0...n] | CI: Main setpoint scaling / Main set scal   |
| p1075[0...n] | CI: Supplementary setp / Suppl set  |
| p1076[0...n] | CI: Supplementary setpoint scaling / Suppl set scal                                 |
| p1085[0...n] | CI: Velocity limit positive direction / v_limit pos                                 |
| p1085[0...n] | CI: Speed limit in positive direction of rotation / n_limit pos                     |
| p1088[0...n] | CI: Velocity limit negative direction / n_limit neg                                 |
| p1088[0...n] | CI: Speed limit in negative direction of rotation / n_limit neg                     |
| p1098[0...n] | CI: Skip velocity scaling / v_skip scal   |
| p1098[0...n] | CI: Skip speed scaling / n_skip scal  |
| p1106[0...n] | CI: Minimum velocity signal source / v_min s_s                                      |
| p1106[0...n] | CI: Minimum speed signal source / n_min s_s   |
| p1110[0...n] | BI: Inhibit negative direction / Inhib neg dir                                      |
| p1111[0...n] | BI: Inhibit positive direction / Inhib pos dir                                      |
| p1113[0...n] | BI: Setpoint inversion / Set inv  |
| p1122[0...n] | BI: Bypass ramp-function generator / Bypass RFG                                     |
| p1138[0...n] | CI: Ramp-function generator ramp-up time scaling / RFG t_RU scal                    |
| p1139[0...n] | CI: Ramp-function generator ramp-down time scaling / RFG t_RD scal                  |
| p1140[0...n] | BI: Enable ramp-function generator/inhibit ramp-function generator / Enable RFG     |
| p1141[0...n] | BI: Continue ramp-function generator/freeze ramp-function generator / Continue RFG  |
| p1142[0...n] | BI: Enable setpoint/inhibit setpoint / Setpoint enable                              |
| p1143[0...n] | BI: Ramp-function generator, accept setting value / RFG accept set val              |
| p1144[0...n] | CI: Ramp-function generator setting value / RFG setting value                       |
| p1155[0...n] | CI: Speed controller speed setpoint 1 / n_ctrl n_set 1                              |
| p1155[0...n] | CI: Velocity controller velocity setpoint 1 / v_ctrl v_set 1                        |
| p1160[0...n] | CI: Speed controller speed setpoint 2 / n_ctrl n_set 2                              |
| p1160[0...n] | CI: Velocity controller velocity setpoint 2 / v_ctrl v_set 2                        |
| p1201[0...n] | CI: Position offset incremental/absolute valid / x_offs valid                       |
| p1201[0...n] | BI: Flying restart enable signal source / FlyRest enab s_s                          |
| p1230[0...n] | BI: Armature short-circuit / DC braking activation / ASC/DC brk act                 |
| p1235[0...n] | BI: External armature short-circuit contactor feedback signal / ASC ext feedback    |
| p1330[0...n] | CI: U/f control independent voltage setpoint / Uf U_set independ.                   |
| p1356[0...n] | CI: U/f control angular setpoint / Uf ang setpoint                                  |
| p1430[0...n] | CI: Velocity precontrol / v_prectrl   |
| p1430[0...n] | CI: Speed precontrol / n_prectrl  |
| p1437[0...n] | CI: Speed controller reference model I component input / n_ctrRefMod I_comp         |
| p1440[0...n] | CI: Speed controller speed actual value input / n_ctrl n_act                        |
| p1455[0...n] | CI: Speed controller P gain adaptation signal / n_ctrl adpt_sig Kp                  |
| p1455[0...n] | CI: Velocity controller P gain adaptation signal / v_ctrl adpt_sig Kp               |
| p1466[0...n] | CI: Speed controller P gain scaling / n_ctrl Kp scal                                |
| p1466[0...n] | CI: Velocity controller P gain scaling / v_ctrl Kp scal                             |
| p1475[0...n] | CI: Speed controller torque setting value for motor holding brake / n_ctrl M_sv MHB |
| p1476[0...n] | BI: Velocity controller hold integrator / v_ctrl integ stop                         |
| p1476[0...n] | BI: Speed controller hold integrator / n_ctrl integ stop                            |
| p1477[0...n] | BI: Velocity controller set integrator value / v_ctrl integ set                     |
| p1477[0...n] | BI: Speed controller set integrator value / n_ctrl integ set                        |
| p1478[0...n] | CI: Velocity controller integrator value / v_ctr integ_setVal                       |
| p1478[0...n] | CI: Speed controller integrator setting value / n_ctr integ_setVal                  |
| p1479[0...n] | CI: Speed controller integrator setting value scaling / n_ctrl I_val scal           |
| p1486[0...n] | CI: Droop compensation torque / Droop M_comp  |
| p1492[0...n] | BI: Droop feedback enable / Droop enable  |
| p1495[0...n] | CI: Acceleration precontrol / a_prectrl   |
| p1497[0...n] | CI: Moment of inertia scaling signal source / M_inert scal s_s                      |
| p1497[0...n] | CI: Mass scaling signal source / Mass scal s_s                                      |

|              |   |
|--------------|---|
| p1500[0...n] | Macro Connector Inputs (CI) for torque setpoints / Macro CI M_set         |
| p1500[0...n] | Macro Connector Inputs (CI) for force setpoints / Macro CI F_set          |
| p1501[0...n] | BI: Change over between closed-loop speed/torque control / Chgov n/M_ctrl |
| p1501[0...n] | BI: Change over velocity/force control / Chgov n/F_ctrl                   |
| p1502[0...n] | BI: Freeze moment of inertia estimator / J_estimator freeze               |
| p1503[0...n] | CI: Torque setpoint / M_set   |
| p1511[0...n] | CI: Force setpoint / F_set  |
| p1511[0...n] | CI: Supplementary torque 1 / M_suppl 1                                    |
| p1511[0...n] | CI: Supplementary force 1 / F_suppl 1                                     |
| p1512[0...n] | CI: Force setpoint scaling / F_set scal                                   |
| p1512[0...n] | CI: Supplementary torque 1 scaling / M_suppl 1 scal                       |
| p1512[0...n] | CI: Supplementary force 1 scaling / F_suppl 1 scal                        |
| p1513[0...n] | CI: Supplementary torque 2 / M_suppl 2                                    |
| p1513[0...n] | CI: Supplementary force 2 / F_suppl 2                                     |
| p1522[0...n] | CI: Force limit upper/motoring / F_max upper/mot                          |
| p1522[0...n] | CI: Torque limit upper/motoring / M_max upper/mot                         |
| p1522[0...n] | CI: Torque limit upper / M_max upper                                      |
| p1523[0...n] | CI: Force limit lower/regenerative / F_max lower/reg                      |
| p1523[0...n] | CI: Torque limit lower/regenerative / M_max lower/reg                     |
| p1523[0...n] | CI: Torque limit lower / M_max lower                                      |
| p1528[0...n] | CI: Force limit upper/motoring scaling / F_max up/mot scal                |
| p1528[0...n] | CI: Torque limit upper/motoring scaling / M_max up/mot scal               |
| p1528[0...n] | CI: Torque limit upper scaling / M_max upper scal                         |
| p1529[0...n] | CI: Force limit lower/regenerative scaling / F_max low/reg scal           |
| p1529[0...n] | CI: Torque limit lower/regenerative scaling / M_max low/reg scal          |
| p1529[0...n] | CI: Torque limit lower scaling / M_max lower scal                         |
| p1540[0...n] | CI: Torque limit speed controller upper scaling / M_max n-ctr upScal      |
| p1541[0...n] | CI: Torque limiting speed controller lower scaling / M_max nctr lowScal   |
| p1542[0...n] | CI: Travel to fixed stop torque reduction / TfS M_red                     |
| p1542[0...n] | CI: Travel to fixed stop force reduction / TfS F_red                      |
| p1545[0...n] | BI: Activates travel to a fixed stop / TfS activation                     |
| p1550[0...n] | BI: Transfer actual torque as torque offset / Accept act torque           |
| p1550[0...n] | BI: Transfer actual force as force offset / Accept act force              |
| p1551[0...n] | BI: Torque limit variable/fixed signal source / M_lim var/fix s_s         |
| p1551[0...n] | BI: Force limit variable/fixed signal source / F_lim var/fix s_s          |
| p1552[0...n] | CI: Torque limit upper scaling without offset / M_max up w/o offs         |
| p1552[0...n] | CI: Force limit upper scaling without offset / F_max up w/o offs          |
| p1554[0...n] | CI: Torque limit lower scaling without offset / M_max low w/o offs        |
| p1554[0...n] | CI: Force limit lower scaling without offset / F_max low w/o offs         |
| p1555[0...n] | CI: Power limit / P_max   |
| p1569[0...n] | CI: Supplementary torque 3 / M_suppl 3                                    |
| p1569[0...n] | CI: Supplementary force 3 / F_suppl 3                                     |
| p1571[0...n] | CI: Supplementary flux setpoint / Suppl flux set                          |
| p1640[0...n] | CI: Excitation current actual value signal source / I_exc_ActV s_s        |
| p2103[0...n] | BI: 1st acknowledge faults / 1st acknowledge                              |
| p2104[0...n] | BI: 2nd acknowledge faults / 2nd acknowledge                              |
| p2105[0...n] | BI: 3rd acknowledge faults / 3rd acknowledge                              |
| p2106[0...n] | BI: External fault 1 / External fault 1                                   |
| p2107[0...n] | BI: External fault 2 / External fault 2                                   |
| p2108[0...n] | BI: External fault 3 / External fault 3                                   |
| p2112[0...n] | BI: External alarm 1 / External alarm 1                                   |
| p2116[0...n] | BI: External alarm 2 / External alarm 2                                   |
| p2117[0...n] | BI: External alarm 3 / External alarm 3                                   |

### 2.3.2 Parameters for drive data sets (DDS)

**Note**

References: SINAMICS S120 Function Manual Drive Functions  
Chapter "Data sets"

The following list contains the parameters that are dependent on the drive data sets.

Product: SINAMICS S120/S150, Version: 5206900, Language: eng, Type: DDS

|              |  |
|--------------|--|
| p0186[0...n] | Motor Data Sets (MDS) number / MDS number                      |
| p0187[0...n] | Encoder 1 encoder data set number / Enc 1 EDS number           |
| p0188[0...n] | Encoder 2 encoder data set number / Enc 2 EDS number           |
| p0189[0...n] | Encoder 3 encoder data set number / Enc 3 EDS number           |
| p0340[0...n] | Automatic parameter calculation / Auto par calc                |
| p0340[0...n] | Automatic calculation motor/control parameters / Calc auto par |
| p0345[0...n] | Required damping controlled axis / Damped ctrl axis            |
| p0350[0...n] | Damping uncontrolled axis / Damp unctrl axis                   |
| p0351[0...n] | Piston position natural frequency minimum / Piston pos fn min  |
| p0352[0...n] | Axis natural frequency A side / Axis fn A                      |
| p0353[0...n] | Axis natural frequency center / Axis fn center                 |
| p0354[0...n] | Axis natural frequency B side / Axis fn B                      |
| p0572[0...n] | Activate/deactivate inhibit list / Inh_list act/deact          |
| p0578[0...n] | Calculate technology-dependent parameters / Calc tec par       |
| p0640[0...n] | Current limit / Current limit                                  |

|              |   |
|--------------|---|
| p0642[0...n] | Encoderless operation current reduction / Encoderl op I_red     |
| p0644[0...n] | Current limit excitation induction motor / I_max excit ASM      |
| p1001[0...n] | CO: Fixed velocity setpoint 1 / v_set_fix 1                     |
| p1001[0...n] | CO: Fixed speed setpoint 1 / n_set_fix 1                        |
| p1002[0...n] | CO: Fixed velocity setpoint 2 / v_set_fix 2                     |
| p1002[0...n] | CO: Fixed speed setpoint 2 / n_set_fix 2                        |
| p1003[0...n] | CO: Fixed velocity setpoint 3 / v_set_fix 3                     |
| p1003[0...n] | CO: Fixed speed setpoint 3 / n_set_fix 3                        |
| p1004[0...n] | CO: Fixed velocity setpoint 4 / v_set_fix 4                     |
| p1004[0...n] | CO: Fixed speed setpoint 4 / n_set_fix 4                        |
| p1005[0...n] | CO: Fixed velocity setpoint 5 / v_set_fix 5                     |
| p1005[0...n] | CO: Fixed speed setpoint 5 / n_set_fix 5                        |
| p1006[0...n] | CO: Fixed velocity setpoint 6 / v_set_fix 6                     |
| p1006[0...n] | CO: Fixed speed setpoint 6 / n_set_fix 6                        |
| p1007[0...n] | CO: Fixed velocity setpoint 7 / v_set_fix 7                     |
| p1007[0...n] | CO: Fixed speed setpoint 7 / n_set_fix 7                        |
| p1008[0...n] | CO: Fixed velocity setpoint 8 / v_set_fix 8                     |
| p1008[0...n] | CO: Fixed speed setpoint 8 / n_set_fix 8                        |
| p1009[0...n] | CO: Fixed velocity setpoint 9 / v_set_fix 9                     |
| p1009[0...n] | CO: Fixed speed setpoint 9 / n_set_fix 9                        |
| p1010[0...n] | CO: Fixed velocity setpoint 10 / v_set_fix 10                   |
| p1010[0...n] | CO: Fixed speed setpoint 10 / n_set_fix 10                      |
| p1011[0...n] | CO: Fixed velocity setpoint 11 / v_set_fix 11                   |
| p1011[0...n] | CO: Fixed speed setpoint 11 / n_set_fix 11                      |
| p1012[0...n] | CO: Fixed velocity setpoint 12 / v_set_fix 12                   |
| p1012[0...n] | CO: Fixed speed setpoint 12 / n_set_fix 12                      |
| p1013[0...n] | CO: Fixed velocity setpoint 13 / v_set_fix 13                   |
| p1013[0...n] | CO: Fixed speed setpoint 13 / n_set_fix 13                      |
| p1014[0...n] | CO: Fixed velocity setpoint 14 / v_set_fix 14                   |
| p1014[0...n] | CO: Fixed speed setpoint 14 / n_set_fix 14                      |
| p1015[0...n] | CO: Fixed velocity setpoint 15 / v_set_fix 15                   |
| p1015[0...n] | CO: Fixed speed setpoint 15 / n_set_fix 15                      |
| p1030[0...n] | Motorized potentiometer configuration / MoP configuration       |
| p1037[0...n] | Motorized potentiometer maximum velocity / MoP n_max            |
| p1037[0...n] | Motorized potentiometer maximum speed / MoP n_max               |
| p1038[0...n] | Motorized potentiometer minimum velocity / MoP n_min            |
| p1038[0...n] | Motorized potentiometer minimum speed / MoP n_min               |
| p1040[0...n] | Motorized potentiometer starting value / MoP start value        |
| p1047[0...n] | Motorized potentiometer ramp-up time / MoP ramp-up time         |
| p1048[0...n] | Motorized potentiometer ramp-down time / MoP ramp-down time     |
| p1058[0...n] | Jog 1 velocity setpoint / Jog 1 v_set                           |
| p1058[0...n] | Jog 1 speed setpoint / Jog 1 n_set                              |
| p1059[0...n] | Jog 2 velocity setpoint / Jog 2 v_set                           |
| p1059[0...n] | Jog 2 speed setpoint / Jog 2 n_set                              |
| p1063[0...n] | Setpoint channel velocity limit / Set_chan v_lim                |
| p1063[0...n] | Setpoint channel speed limit / Set_chan n_lim                   |
| p1080[0...n] | Minimum velocity / v_min  |
| p1080[0...n] | Minimum speed / n_min   |
| p1082[0...n] | Maximum velocity / v_max  |
| p1082[0...n] | Maximum speed / n_max   |
| r1082[0...n] | Encoder emulation maximum speed / Enc_emul n_max                |
| p1083[0...n] | CO: Velocity limit positive direction / v_limit pos             |
| p1083[0...n] | CO: Speed limit in positive direction of rotation / n_limit pos |
| p1086[0...n] | CO: Velocity limit negative direction / v_limit neg             |
| p1086[0...n] | CO: Speed limit in negative direction of rotation / n_limit neg |

## 2 Parameters

### 2.3 Parameters for data sets

|              |   |
|--------------|---|
| p1091[0...n] | Skip velocity 1 / v_skip 1  |
| p1091[0...n] | Skip speed 1 / n_skip 1   |
| p1092[0...n] | Skip velocity 2 / v_skip 2  |
| p1092[0...n] | Skip speed 2 / n_skip 2   |
| p1093[0...n] | Skip velocity 3 / v_skip 3  |
| p1093[0...n] | Skip speed 3 / n_skip 3   |
| p1094[0...n] | Skip velocity 4 / v_skip 4  |
| p1094[0...n] | Skip speed 4 / n_skip 4   |
| p1101[0...n] | Skip velocity bandwidth / v_skip bandwidth  |
| p1101[0...n] | Skip speed bandwidth / n_skip bandwidth   |
| p1120[0...n] | Ramp-function generator ramp-up time / RFG ramp-up time                               |
| p1121[0...n] | Ramp-function generator ramp-down time / RFG ramp-down time                           |
| p1130[0...n] | Ramp-function generator initial rounding-off time / RFG t_start_round                 |
| p1131[0...n] | Ramp-function generator final rounding-off time / RFG t_end_delay                     |
| p1134[0...n] | Ramp-function generator rounding-off type / RFG round-off type                        |
| p1135[0...n] | OFF3 ramp-down time / OFF3 t_RD   |
| p1136[0...n] | OFF3 initial rounding-off time / RFGOFF3 t_strt_rnd                                   |
| p1137[0...n] | OFF3 final rounding-off time / RFG OFF3 t_end_del                                     |
| p1145[0...n] | Ramp-function generator tracking intensity. / RFG track intens                        |
| p1148[0...n] | Ramp-function gen. tolerance for ramp-up and ramp-down active / RFG tol HL/RL act     |
| p1151[0...n] | Ramp-function generator configuration / RFG config                                    |
| p1189[0...n] | Speed setpoint configuration / n_ctrl config  |
| p1189[0...n] | Velocity setpoint configuration / v_ctrl config                                       |
| p1192[0...n] | DSC encoder selection / DSC enc selection   |
| p1193[0...n] | DSC encoder adaptation factor / DSC enc adpt fact                                     |
| p1200[0...n] | Flying restart operating mode / FlyRest op_mode                                       |
| p1202[0...n] | Flying restart search current / FlyRest I_srch  |
| p1203[0...n] | Flying restart search rate factor / FlyRes v_srch fact                                |
| p1226[0...n] | Standstill detection velocity threshold / v_standst v_thr                             |
| p1226[0...n] | Threshold for zero speed detection / n_standst n_thr                                  |
| p1240[0...n] | Vdc controller or Vdc monitoring configuration / Vdc ctrl config                      |
| p1243[0...n] | Vdc_max controller dynamic factor / Vdc_max dyn_factor                                |
| p1244[0...n] | DC link voltage threshold upper / Vdc upper thr                                       |
| p1245[0...n] | Vdc_min controller switch-in level (kinetic buffering) / Vdc_min on_level             |
| p1247[0...n] | Vdc_min controller dynamic factor (kinetic buffering) / Vdc_min dyn_factor            |
| p1248[0...n] | DC link voltage threshold lower / Vdc lower thr                                       |
| p1249[0...n] | Vdc_max controller speed threshold / Vdc_max n_thr                                    |
| p1250[0...n] | Vdc controller proportional gain / Vdc_ctrl Kp  |
| p1251[0...n] | Vdc controller integral time / Vdc_ctrl Tn  |
| p1252[0...n] | Vdc controller rate time / Vdc_ctrl Tv  |
| p1255[0...n] | Vdc_min controller time threshold / Vdc_min t_thr                                     |
| p1256[0...n] | Vdc_min controller response (kinetic buffering) / Vdc_min response                    |
| p1257[0...n] | Vdc_min controller speed threshold / Vdc_min n_thr                                    |
| p1262[0...n] | Bypass dead time / Bypass t_dead  |
| p1270[0...n] | Flying restart configuration / FlyRest config   |
| p1271[0...n] | Flying restart maximum frequency for the inhibited direction / FlyRest f_max dir      |
| p1280[0...n] | Vdc controller or Vdc monitoring configuration (U/f) / Vdc_ctr config U/f             |
| p1281[0...n] | Vdc controller configuration / Vdc ctrl config  |
| p1283[0...n] | Vdc_max controller dynamic factor (U/f) / Vdc_max dyn_factor                          |
| p1284[0...n] | Vdc_max controller time threshold (U/f) / Vdc_max t_thr                               |
| p1285[0...n] | Vdc_min controller switch-in level (kinetic buffering) (U/f) / Vdc_min on_level       |
| p1287[0...n] | Vdc_min controller dynamic factor (kinetic buffering) (U/f) / Vdc_min dyn_factor      |
| p1288[0...n] | Vdc_max controller feedback coupling factor ramp-fct. gen. (U/f) / Vdc_max factor RFG |
| p1289[0...n] | Vdc_max controller speed threshold (U/f) / Vdc_max n_thr                              |
| p1290[0...n] | Vdc controller proportional gain (U/f) / Vdc_ctrl Kp                                  |

|              |  |
|--------------|--|
| p1291[0...n] | Vdc controller integral time (U/f) / Vdc_ctrl Tn                                 |
| p1292[0...n] | Vdc controller rate time (U/f) / Vdc_ctrl Tv                                     |
| p1293[0...n] | Vdc min controller output limit (U/f) / Vdc_min outp_lim                         |
| p1295[0...n] | Vdc_min controller time threshold (U/f) / Vdc_min t_thr                          |
| p1296[0...n] | Vdc_min controller response (kinetic buffering) (U/f) / Vdc_min response         |
| p1297[0...n] | Vdc_min controller speed threshold (U/f) / Vdc_min n_thr                         |
| p1300[0...n] | Open-loop/closed-loop control operating mode / Op/cl-lp ctrl_mode                |
| p1302[0...n] | U/f control configuration / U/f config   |
| p1310[0...n] | Starting current (voltage boost) permanent / I_start (Ua) perm                   |
| p1311[0...n] | Starting current (voltage boost) when accelerating / I_start accel               |
| p1312[0...n] | Starting current (voltage boost) when starting / I_start start                   |
| p1317[0...n] | U/f control activation / Uf act  |
| p1318[0...n] | U/f control ramp-up/ramp-down time / Uf t_rmp-up_rmp-dn                          |
| p1319[0...n] | U/f control voltage at zero frequency / Uf U at f=0 Hz                           |
| p1320[0...n] | U/f control programmable characteristic frequency 1 / Uf char f1                 |
| p1321[0...n] | U/f control programmable characteristic voltage 1 / Uf char U1                   |
| p1322[0...n] | U/f control programmable characteristic frequency 2 / Uf char f2                 |

| p1658[0...n] | Manip. var. filter 1 velocity controller denom. natural freq. / Filt1 v_ctr fn_den    |
| p1658[0...n] | Current setpoint filter 1 denominator natural frequency / I_set_filt1 fn_den          |
| p1659[0...n] | Manip. variable filter 1 velocity controller denominator damping / Filt 1 v_ctr D_den |
| p1659[0...n] | Current setpoint filter 1 denominator damping / I_set_filt 1 D_den                    |
| p1660[0...n] | Manip. var. filter 1 velocity controller numerator natural freq. / Filt1 v_ctr fn_num |
| p1660[0...n] | Current setpoint filter 1 numerator natural frequency / I_set_filt1 fn_num            |
| p1661[0...n] | Manip. variable filter 1 velocity controller numerator damping / Filt 1 v_ctr D_num   |
| p1661[0...n] | Current setpoint filter 1 numerator damping / I_set_filt 1 D_num                      |
| p1662[0...n] | Manipulated variable filter 2 velocity controller type / Filt 2 v_ctrl type           |
| p1662[0...n] | Current setpoint filter 2 type / I_set_filt 2 type                                    |
| p1663[0...n] | Manip. var. filter 2 velocity controller denom. natural freq. / Filt2 v_ctr fn_den    |
| p1663[0...n] | Current setpoint filter 2 denominator natural frequency / I_set_filt2 fn_den          |
| p1664[0...n] | Manip. variable filter 2 velocity controller denominator damping / Filt 2 v_ctr D_den |
| p1664[0...n] | Current setpoint filter 2 denominator damping / I_set_filt 2 D_den                    |
| p1665[0...n] | Manip. var. filter 2 velocity controller numerator natural freq. / Filt2 v_ctr fn_num |
| p1665[0...n] | Current setpoint filter 2 numerator natural frequency / I_set_filt2 fn_num            |
| p1666[0...n] | Manip. variable filter 2 velocity controller numerator damping / Filt 2 v_ctr D_num   |
| p1666[0...n] | Current setpoint filter 2 numerator damping / I_set_filt 2 D_num                      |
| p1667[0...n] | Manipulated variable filter 3 velocity controller type / Filt 3 v_ctrl type           |
| p1667[0...n] | Current setpoint filter 3 type / I_set_filt 3 type                                    |
| p1668[0...n] | Manip. var. filter 3 velocity controller denom. natural freq. / Filt3 v_ctr fn_den    |
| p1668[0...n] | Current setpoint filter 3 denominator natural frequency / I_set_filt3 fn_den          |
| p1669[0...n] | Manip. variable filter 3 velocity controller denominator damping / Filt 3 v_ctr D_den |
| p1669[0...n] | Current setpoint filter 3 denominator damping / I_set_filt 3 D_den                    |
| p1670[0...n] | Manip. var. filter 3 velocity controller numerator natural freq. / Filt3 v_ctr fn_num |
| p1670[0...n] | Current setpoint filter 3 numerator natural frequency / I_set_filt3 fn_num            |
| p1671[0...n] | Manip. variable filter 3 velocity controller numerator damping / Filt 3 v_ctr D_num   |
| p1671[0...n] | Current setpoint filter 3 numerator damping / I_set_filt 3 D_num                      |
| p1672[0...n] | Manipulated variable filter 4 velocity controller type / Filt 4 v_ctrl type           |
| p1672[0...n] | Current setpoint filter 4 type / I_set_filt 4 type                                    |
| p1673[0...n] | Manip. var. filter 4 velocity controller denom. natural freq. / Filt4 v_ctr fn_den    |
| p1673[0...n] | Current setpoint filter 4 denominator natural frequency / I_set_filt4 fn_den          |
| p1674[0...n] | Manip. variable filter 4 velocity controller denominator damping / Filt 4 v_ctr D_den |
| p1674[0...n] | Current setpoint filter 4 denominator damping / I_set_filt 4 D_den                    |
| p1675[0...n] | Manip. var. filter 4 velocity controller numerator natural freq. / Filt4 v_ctr fn_num |

## 2 Parameters

### 2.3 Parameters for data sets

|              |  |
|--------------|--|
| p1675[0...n] | Current setpoint filter 4 numerator natural frequency / I_set_filt4 fn_den             |
| p1676[0...n] | Manip. variable filter 4 velocity controller numerator damping / Filt 4 v_ctr D_num    |
| p1676[0...n] | Current setpoint filter 4 numerator damping / I_set_filt 4 D_num                       |
| p1677[0...n] | Speed actual value filter 5 type / n_act_filt 5 type                                   |
| p1678[0...n] | Speed actual value filter 5 denominator natural frequency / n_act_filt5 fn_den         |
| p1679[0...n] | Speed actual value filter 5 denominator damping / n_act_filt 5 D_den                   |
| p1680[0...n] | Speed actual value filter 5 numerator natural frequency / n_act_filt5 fn_num           |
| p1681[0...n] | Speed actual value filter 5 numerator damping / n_act_filt 5 D_num                     |
| p1700[0...n] | Force controller loop gain / F_ctrl loop_gain  |
| p1701[0...n] | Current controller reference model dead time / I_ctrRefMod t_dead                      |
| p1702[0...n] | Isd current controller precontrol scaling / Isd_ctr_prectrScal                         |
| p1703[0...n] | Isq current controller precontrol scaling / Isq_ctr_prectrScal                         |
| p1704[0...n] | Isq current controller precontrol EMF scaling / Isq_ctrl EMF scal                      |
| p1705[0...n] | Flux setpoint/actual value tracking threshold / Flux track thr                         |
| p1715[0...n] | Force controller P gain / F_ctrl Kp  |
| p1715[0...n] | Current controller P gain / I_ctrl Kp  |
| p1716[0...n] | Force controller P gain weakening / F_ctrl Kp red                                      |
| p1717[0...n] | Force controller integral time / F_ctrl Tn   |
| p1717[0...n] | Current controller integral-action time / I_ctrl Tn                                    |
| p1718[0...n] | Force controller D component smoothing time constant / F_ctrl D comp T                 |
| p1719[0...n] | Force controller derivative-action time / F_ctrl t_deriv                               |
| p1720[0...n] | Force controller precontrol factor / F_ctrl prectr fact                                |
| p1720[0...n] | Current controller d axis P gain / Id_ctrl Kp  |
| p1721[0...n] | Precontrol filter activation / Prectrl_filt act  |
| p1722[0...n] | Precontrol filter type / Prectrl_filt type   |
| p1722[0...n] | Current controller d axis integral time / I_ctrl d-axis Tn                             |
| p1724[0...n] | Precontrol filter denominator natural frequency / Prectr_filt fn_den                   |
| p1725[0...n] | Precontrol filter denominator damping / Prectrl_filt D_den                             |
| p1726[0...n] | Precontrol filter numerator natural frequency / Prectr_filt fn_num                     |
| p1726[0...n] | Quadrature arm decoupling scaling / Transv_decpl scal                                  |
| p1727[0...n] | Precontrol filter numerator damping / Prectrl_filt D_num                               |
| p1727[0...n] | Quadrature arm decoupling at voltage limit scaling / TrnsvDecplVmaxScal                |
| p1730[0...n] | Isd controller integral component shutdown threshold / Isd ctr Tn shutd                |
| p1731[0...n] | Isd controller combination current time component / Isd ctr I_combi T1                 |
| p1734[0...n] | Isq current controller precontrol eddy current compensation drop / Isq_ctr_prectr drop |
| p1735[0...n] | Isq current controller prectrl eddy current comp time constant / Isq_ctrl_prectr Tc    |
| p1740[0...n] | Gain resonance damping for encoderless closed-loop control / Gain res_damp             |
| p1744[0...n] | Motor model speed threshold stall detection / MotMod n_thr stall                       |
| p1745[0...n] | Motor model error threshold stall detection / MotMod ThrStall                          |
| p1747[0...n] | Motor model pulse technique transition speed / MotMod puls tech n                      |
| p1748[0...n] | Motor model changeover speed lower / MotMod n_chgov low                                |
| p1749[0...n] | Motor model upper changeover speed / increase changeover speed / Up/incr n_chgov       |
| p1750[0...n] | Motor model configuration / MotMod config  |
| p1752[0...n] | Motor model changeover speed operation with encoder / MotMod n_chgov enc               |
| p1752[0...n] | Motor model with encoder changeover velocity / MotMod enc v_chgov                      |
| p1753[0...n] | Motor model changeover speed hysteresis operation with encoder / MotMod n_chgovHysE    |
| p1754[0...n] | Flux angle difference smoothing time / Angle diff t_smth                               |
| p1755[0...n] | Motor model changeover speed encoderless operation / MotMod n_chgSnsorl                |
| p1755[0...n] | Motor model changeover velocity encoderless operation / MotMod v_chgSnsorl             |
| p1757[0...n] | Motor model w/o enc. op./cl.-loop controlled stab. controller Kp / MotMod w/o enc Kp   |
| p1758[0...n] | Motor model changeover delay time closed/open-loop control / MotMod t_cl_op            |
| p1759[0...n] | Motor model changeover delay time open/closed-loop control / MotMod t_op_cl            |
| p1760[0...n] | Motor model with encoder speed adaptation Kp / MotMod wE n_ada Kp                      |
| p1761[0...n] | Motor model with encoder speed adaptation Tn / MotMod wE n_ada Tn                      |
| p1764[0...n] | Motor model without encoder speed adaptation Kp / MotMod woE n_adaKp                   |

|              |   |
|--------------|---|
| p1766[0...n] | Motor model voltage model calculation enable / U_MotMod calc enab                 |
| p1767[0...n] | Motor model without encoder speed adaptation Tn / MotMod woE n_adaTn              |
| p1769[0...n] | Motor model changeover delay time closed-loop control / MotMod t_cl_ctrl          |
| p1774[0...n] | Motor model offset voltage compensation alpha / MotMod offs comp A                |
| p1775[0...n] | Motor model offset voltage compensation beta / MotMod offs comp B                 |
| p1780[0...n] | Motor model adaptation configuration / MotMod adpt config                         |
| p1780[0...n] | Motor/converter model adaptation configuration / MotMod adpt config               |
| p1784[0...n] | Motor model feedback scaling / MotMod fdbk scal                                   |
| p1785[0...n] | Motor model Lh adaptation Kp / MotMod Lh Kp                                       |
| p1786[0...n] | Motor model Lh adaptation integral time / MotMod Lh Tn                            |
| r1787[0...n] | Motor model Lh adaptation corrective value / MotMod Lh corr                       |
| p1795[0...n] | Motor model kT adaptation smoothing time / MotMod kT t_smth                       |
| p1795[0...n] | Motor model kT adaptation integral time / MotMod kT Tn                            |
| r1797[0...n] | Motor model kT adaptation corrective value / MotMod kT corr                       |
| p1798[0...n] | Motor model pulse technique speed adaptation Kp / MotMod pulsTech Kp              |
| p1799[0...n] | Motor model pulse technique speed adaptation Tn / MotMod pulsTech Tn              |
| p1800[0...n] | Manipulated variable filter activation / ManVarFilt act                           |
| p1800[0...n] | Pulse frequency setpoint / Pulse freq set   |
| p1801[0...n] | Manipulated variable filter type / ManVarFilt type                                |
| p1802[0...n] | Manipulated variable filter denominator natural frequency / ManVarFilt fn_den     |
| p1802[0...n] | Modulator mode / Modulator mode   |
| p1803[0...n] | Manipulated variable filter denominator damping / ManVar_filt D_den               |
| p1803[0...n] | Maximum modulation depth / Mod_depth max  |
| p1804[0...n] | Manipulated variable filter numerator natural freq. / ManVarFilt fn_num           |
| p1804[0...n] | Filter time constant smoothed modulation index / Tc_filt mod_idx sm               |
| p1805[0...n] | Manipulated variable filter numerator damping / ManVarFilt D_num                  |
| p1806[0...n] | Filter time constant Vdc correction / Tc_filt Vdc_corr                            |
| p1811[0...n] | Pulse frequency wobble amplitude / Puls wobb ampl                                 |
| p1814[0...n] | Vdc filter dead band for modulation switchover / Vdc filt dead band               |
| p1820[0...n] | Invert output voltage / U_output inv  |
| p1820[0...n] | Reverse the output phase sequence / Outp_ph_seq rev                               |
| p1821[0...n] | Direction / Direction   |
| p1821[0...n] | Direction of rotation / Dir of rot  |

## 2 Parameters

### 2.3 Parameters for data sets

|              |  |
|--------------|--|
| p1851[0...n] | Control voltage limiting negative / U_ctrl limit neg           |
| p1952[0...n] | Voltage emulation error final value / U_error final val        |
| p1953[0...n] | Voltage emulation error current offset / U_error I_offset      |
| p1954[0...n] | Voltage emulation error semiconductor voltage / U_error U_semi |
| p1959[0...n] | Data identification moving configuration / Dat_ID mov config   |
| p1998[0...n] | PollID circle center point / PollID circ center                |
| p2140[0...n] | Hysteresis speed 2 / n_hysteresis 2                            |
| p2140[0...n] | Hysteresis velocity 2 / v_hysteresis 2                         |
| p2141[0...n] | Speed threshold 1 / n_thr val 1                                |
| p2141[0...n] | Velocity threshold value 1 / v_thr val 1                       |
| p2142[0...n] | Hysteresis speed 1 / n_hysteresis 1                            |
| p2149[0...n] | Monitoring configuration / Mon config                          |
| p2150[0...n] | Hysteresis speed 3 / n_hysteresis 3                            |
| p2150[0...n] | Hysteresis velocity 3 / v_hysteresis 3                         |
| p2153[0...n] | Velocity actual value filter time constant / v_ActV filt Tc    |
| p2153[0...n] | Speed actual value filter time constant / n_ActV filt Tc       |
| p2155[0...n] | Speed threshold 2 / n_thr val 2                                |
| p2155[0...n] | Velocity threshold value 2 / v_thr val 2                       |
| p2156[0...n] | On-delay comparison value reached / t_on cmpr val rchd         |
| p2161[0...n] | Speed threshold 3 / n_thr val 3                                |
| p2161[0...n] | Velocity threshold value 3 / v_thr val 3                       |
| p2162[0...n] | Hysteresis speed n_act > n_max / Hyst n_act>n_max              |
| p2162[0...n] | Hysteresis velocity v_act > v_max / Hyst v_act>v_max           |
| p2163[0...n] | Velocity threshold value 4 / v_thr val 4                       |
| p2163[0...n] | Speed threshold 4 / n_thr val 4                                |
| p2164[0...n] | Hysteresis velocity 4 / v_hysteresis 4                         |
| p2164[0...n] | Hysteresis speed 4 / n_hysteresis 4                            |
| p2166[0...n] | Off-delay v_act = v_set / t_del_off n_i=n_so                   |
| p2166[0...n] | Off-delay n_act = n_set / t_del_off n_i=n_so                   |
| p2167[0...n] | Switch-on delay n_act = n_set / t_on n_act=n_set               |
| p2167[0...n] | On-delay v_act = v_set / t_on n_act=n_set                      |
| p2174[0...n] | Torque threshold value 1 / M_thr val 1                         |
| p2174[0...n] | Force threshold value 1 / F_thr val 1                          |
| p2175[0...n] | Motor blocked velocity threshold / Mot blk v_thr               |
| p2175[0...n] | Motor blocked speed threshold / Mot blk n_thr                  |
| p2177[0...n] | Motor blocked delay time / Mot blk t_del                       |
| p2178[0...n] | Motor stalled delay time / Mot stall t_del                     |
| p2181[0...n] | Load monitoring response / Load mon resp                       |
| p2182[0...n] | Load monitoring velocity threshold 1 / v_thr 1                 |
| p2182[0...n] | Load monitoring speed threshold value 1 / n_thr 1              |
| p2183[0...n] | Load monitoring velocity threshold 2 / v_thr 2                 |
| p2183[0...n] | Load monitoring speed threshold value 2 / n_thr 2              |
| p2184[0...n] | Load monitoring velocity threshold 3 / v_thr 3                 |
| p2184[0...n] | Load monitoring speed threshold value 3 / n_thr 3              |
| p2185[0...n] | Load monitoring force threshold 1 upper / F_thr 1 upper        |
| p2185[0...n] | Load monitoring torque threshold 1 upper / M_thr 1 upper       |
| p2186[0...n] | Load monitoring force threshold 1 lower / F_thr 1 lower        |
| p2186[0...n] | Load monitoring torque threshold 1 lower / M_thr 1 lower       |
| p2187[0...n] | Load monitoring force threshold 2 upper / F_thr 2 upper        |
| p2187[0...n] | Load monitoring torque threshold 2 upper / M_thr 2 upper       |
| p2188[0...n] | Load monitoring force threshold 2 lower / F_thr 2 lower        |
| p2188[0...n] | Load monitoring torque threshold 2 lower / M_thr 2 lower       |
| p2189[0...n] | Load monitoring force threshold 3 upper / F_thr 3 upper        |
| p2189[0...n] | Load monitoring torque threshold 3 upper / M_thr 3 upper       |
| p2190[0...n] | Load monitoring force threshold 3 lower / F_thr 3 lower        |

|              |  |
|--------------|--|
| p2190[0...n] | Load monitoring torque threshold 3 lower / M_thr 3 lower                           |
| p2192[0...n] | Load monitoring delay time / Load mon t_del  |
| p2194[0...n] | Torque threshold value 2 / M_thr val 2   |
| p2194[0...n] | Force threshold value 2 / F_thr val 2  |
| p2195[0...n] | Torque utilization switch-off delay / M_util t_off                                 |
| p2195[0...n] | Force utilization switch-off delay / F_util t_off                                  |
| p2196[0...n] | Torque utilization scaling / M_util scal   |
| p2201[0...n] | CO: Technology controller fixed value 1 / Tec_ctrl FixVal 1                        |
| p2202[0...n] | CO: Technology controller fixed value 2 / Tec_ctrl FixVal 2                        |
| p2203[0...n] | CO: Technology controller fixed value 3 / Tec_ctrl FixVal 3                        |
| p2204[0...n] | CO: Technology controller fixed value 4 / Tec_ctrl FixVal 4                        |
| p2205[0...n] | CO: Technology controller fixed value 5 / Tec_ctrl FixVal 5                        |
| p2206[0...n] | CO: Technology controller fixed value 6 / Tec_ctrl FixVal 6                        |
| p2207[0...n] | CO: Technology controller fixed value 7 / Tec_ctrl FixVal 7                        |
| p2208[0...n] | CO: Technology controller fixed value 8 / Tec_ctrl FixVal 8                        |
| p2209[0...n] | CO: Technology controller fixed value 9 / Tec_ctrl FixVal 9                        |

| p2214[0...n] | CO: Technology controller fixed value 14 / Tec_ctrl FixVal 14                      |
| p2215[0...n] | CO: Technology controller fixed value 15 / Tec_ctrl FixVal 15                      |
| p2216[0...n] | Technology controller fixed value selection method / Tec_ctr FixVal sel            |
| p2230[0...n] | Technology controller motorized potentiometer configuration / Tec_ctr moP config   |
| p2237[0...n] | Technology controller motorized potentiometer maximum value / Tec_ctrl moP max     |
| p2238[0...n] | Technology controller motorized potentiometer minimum value / Tec_ctrl moP min     |
| p2240[0...n] | Technology controller motorized potentiometer starting value / Tec_ctrl moP start  |
| p2247[0...n] | Technology controller motorized potentiometer ramp-up time / Tec_ctr moP t_r-up    |
| p2248[0...n] | Technology controller motorized potentiometer ramp-down time / Tec_ctrMoP t_r-down |
| p2502[0...n] | LR encoder assignment / Encoder assignment   |
| p2503[0...n] | LR length unit LU per 10 mm / LU per 10 mm   |
| p2504[0...n] | LR motor/load motor distance / Mot/load mot dis                                    |
| p2504[0...n] | LR motor/load motor revolutions / Mot/load mot rev                                 |
| p2505[0...n] | LR motor/load load revolutions / Mot/load load rev                                 |
| p2506[0...n] | LR length unit LU per load path / LU per load path                                 |
| p2506[0...n] | LR length unit LU per load revolution / LU per load rev                            |
| p2519[0...n] | LR position actual value preprocessing config. DDS changeover / s_act config DDS   |
| p2533[0...n] | LR position setpoint filter time constant / s_set_filt Tc                          |
| p2534[0...n] | LR velocity precontrol factor / v_prectrl fact                                     |
| p2534[0...n] | LR speed precontrol factor / n_prectrl fact  |
| p2535[0...n] | LR velocity precontrol symmetrizing filter dead time / v_prectrlFil t_dead         |
| p2535[0...n] | LR speed precontrol symmetrizing filter dead time / n_prectrlFil t_dead            |
| p2536[0...n] | LR velocity precontrol symmetrizing filter PT1 / v_prectrl filt PT1                |
| p2536[0...n] | LR speed precontrol symmetrizing filter PT1 / n_prectrl filt PT1                   |
| p2538[0...n] | LR proportional gain / Kp  |
| p2539[0...n] | LR integral time / Tn  |
| p2546[0...n] | LR dynamic following error monitoring tolerance / s_delta_mon tol                  |
| p2567[0...n] | LR force precontrol mass / F_prectrl mass  |
| p2567[0...n] | LR torque precontrol moment of inertia / M_prectrl M_inert                         |
| p2634[0...n] | EPOS fixed stop maximum following error / Following err max                        |
| p2720[0...n] | Load gear configuration / Load gear config   |
| p2721[0...n] | Load gear rotary absolute encoder revolutions virtual / Abs rot rev                |
| p2722[0...n] | Load gear position tracking tolerance window / Pos track tol                       |
| r2723[0...n] | CO: Load gear absolute value / Load gear AbsV                                      |
| r2724[0...n] | CO: Load gear position difference / Load gear pos diff                             |

## 2 Parameters

### 2.3 Parameters for data sets

|              |   |
|--------------|---|
| p2900[0...n] | CO: Fixed value 1 [%] / Fixed value 1 [%]   |
| p2901[0...n] | CO: Fixed value 2 [%] / Fixed value 2 [%]   |
| p2930[0...n] | CO: Fixed value F [N] / Fixed value F [N]   |
| p2930[0...n] | CO: Fixed value M [Nm] / Fixed value M [Nm]   |
| p3201[0...n] | Excitation current outside the tolerance threshold value / I_exc n Tol thr            |
| p3202[0...n] | Excitation current outside the tolerance hysteresis / I_exc n Tol hyst                |
| p3203[0...n] | Excitation current outside the tolerance delay time / I_exc n Tol t_del               |
| p3204[0...n] | Flux outside the tolerance threshold value / Flux n tol thr                           |
| p3205[0...n] | Flux outside the tolerance hysteresis / Flux n tol hyst                               |
| p3206[0...n] | Flux outside tolerance delay time / Flux n tol t_del                                  |
| p3207[0...n] | Zero current signal threshold value / I_0_sig thr                                     |
| p3208[0...n] | Zero current signal hysteresis / I_0_sig hyst   |
| p3209[0...n] | Zero current signal delay time / I_0_sig t_del  |
| p3233[0...n] | Torque actual value filter time constant / M_act_filt Tc                              |
| p3236[0...n] | Speed threshold value 7 / n_thr val 7   |
| p3237[0...n] | Hysteresis speed 7 / n_hysteresis 7   |
| p3238[0...n] | OFF-delay n_act_motor model = n_act external / t_del n_a = n_ext                      |
| p3241[0...n] | Permissible I2t continuous value / Perm I2t cont val                                  |
| p3242[0...n] | I2t maximum duration / I2t max_dur  |
| p3243[0...n] | I2t alarm threshold / I2t alarm thr   |
| p3315[0...n] | Efficiency optimization 2 minimum flux limit value / Min flux lim val                 |
| p3316[0...n] | Efficiency optimization 2 maximum flux limit value / Max flux lim val                 |
| p3320[0...n] | Fluid flow machine power point 1 / Fluid_mach P1                                      |
| p3321[0...n] | Fluid flow machine speed point 1 / Fluid_mach n1                                      |
| p3322[0...n] | Fluid flow machine power point 2 / Fluid_mach P2                                      |
| p3323[0...n] | Fluid flow machine speed point 2 / Fluid_mach n2                                      |
| p3324[0...n] | Fluid flow machine power point 3 / Fluid_mach P3                                      |
| p3325[0...n] | Fluid flow machine speed point 3 / Fluid_mach n3                                      |
| p3326[0...n] | Fluid flow machine power point 4 / Fluid_mach P4                                      |
| p3327[0...n] | Fluid flow machine speed point 4 / Fluid_mach n4                                      |
| p3328[0...n] | Fluid flow machine power point 5 / Fluid_mach P5                                      |
| p3329[0...n] | Fluid flow machine speed point 5 / Fluid_mach n5                                      |
| p3370[0...n] | Pulse technique configuration / Pulse config  |
| p3371[0...n] | Pulse technique excitation starting point 1 / Pulse excit pt 1                        |
| p3372[0...n] | Pulse technique excitation starting point 2 / Pulse excit pt 2                        |
| p3373[0...n] | Pulse technique excitation adaptation / Pulse excit scale                             |
| p3702[0...n] | APC load speed/motor speed weighting / APC n_load/mot wt                              |
| p3704[0...n] | APC filter activation / APC filter act  |
| p3705[0...n] | APC filter type / APC filter type   |
| p3706[0...n] | APC sub-sampling filter 2.x / APC sub-samp 2.x  |
| p3707[0...n] | APC sub-sampling filter 3.x / APC sub-samp 3.x  |
| p3708[0...n] | APC velocity actual value smoothing time encoder 2 / APCv_ActV t_smth 2               |
| p3708[0...n] | APC speed actual value smoothing time encoder 2 / APCn_ActV t_smth 2                  |

Chapter "Data sets"

The following list contains the parameters that are dependent on the encoder data sets.

Product: SINAMICS S120/S150, Version: 5206900, Language: eng, Type: EDS

|              |   |
|--------------|---|
| p0141[0...n] | Encoder interface (Sensor Module) component number / Enc_intf comp_no               |
| p0142[0...n] | Encoder component number / Encoder comp_no  |
| p0144[0...n] | Sensor Module detection via LED / SM detection LED                                  |
| p0145[0...n] | Activate/deactivate encoder interface / Enc_intf act/deact                          |
| r0146[0...n] | Encoder interface active/inactive / Enc_intf act/deact                              |
| r0147[0...n] | Sensor Module EEPROM data version / SM EEPROM version                               |
| r0148[0...n] | Sensor Module firmware version / SM FW version                                      |
| p0400[0...n] | Encoder type selection / Enc_type sel   |
| p0402[0...n] | Gearbox type selection / Gearbox type sel   |
| p0404[0...n] | Encoder configuration effective / Enc_config eff                                    |
| p0405[0...n] | Square-wave encoder track A/B / Sq-wave enc A/B                                     |
| p0407[0...n] | Linear encoder grid division / Enc grid div   |
| p0408[0...n] | Rotary encoder pulse number / Rot enc pulse no                                      |
| p0410[0...n] | Encoder inversion actual value / Enc inv ActV                                       |
| p0411[0...n] | Measuring gear configuration / Meas gear config                                     |
| p0412[0...n] | Measuring gear absolute encoder rotary revolutions virtual / Abs rot rev            |
| p0413[0...n] | Measuring gear position tracking tolerance window / Pos track window                |
| p0414[0...n] | Redundant coarse position value relevant bits (identified) / Relevant bits          |
| p0415[0...n] | Gx_XIST1 Coarse position safe most significant bit (identified) / Gx_XIST1 safe MSB |
| p0416[0...n] | Non safety-relevant meas. steps position value POS1 (detected) / nsrPos1            |
| p0417[0...n] | Encoder safety comparison algorithm (detected) / Safety comp_algo                   |
| p0418[0...n] | Fine resolution Gx_XIST1 (in bits) / Enc fine Gx_XIST1                              |
| p0419[0...n] | Fine resolution absolute value Gx_XIST2 (in bits) / Enc fine Gx_XIST2               |
| p0420[0...n] | Encoder connection / Enc_connection   |
| p0421[0...n] | Absolute encoder rotary multiturn resolution / Enc abs multiturn                    |
| p0422[0...n] | Absolute encoder linear measuring step resolution / Enc abs meas step               |
| p0423[0...n] | Absolute encoder rotary singleturn resolution / Enc abs singleturn                  |
| p0424[0...n] | Encoder linear zero mark distance / Enc lin ZM_dist                                 |
| p0425[0...n] | Encoder rotary zero mark distance / Enc rot dist ZM                                 |
| p0426[0...n] | Encoder zero mark differential distance / Enc ZM Dif_dist                           |
| p0427[0...n] | Encoder SSI baud rate / Enc SSI baud rate   |
| p0428[0...n] | Encoder SSI monoflop time / Enc SSI t_monoflop                                      |
| p0429[0...n] | Encoder SSI configuration / Enc SSI config  |
| p0430[0...n] | Sensor Module configuration / SM config   |
| p0431[0...n] | Angular commutation offset / Ang_com offset   |
| p0432[0...n] | Gearbox factor encoder revolutions / Grbx_fact enc_rev                              |
| p0433[0...n] | Gearbox factor motor/load revolutions / Grbx_fact mot/load                          |

|              |   |
|--------------|---|
| p0434[0...n] | Encoder SSI error bit / Enc SSI error bit   |
| p0435[0...n] | Encoder SSI alarm bit / Enc SSI alarm bit   |
| p0436[0...n] | Encoder SSI parity bit / Enc SSI parity bit                                       |
| p0437[0...n] | Sensor Module configuration extended / SM config ext                              |
| p0438[0...n] | Square-wave encoder filter time / Enc t_filt                                      |
| p0439[0...n] | Encoder ramp-up time / Enc ramp-up time   |
| p0440[0...n] | Copy encoder serial number / Copy enc ser_no                                      |
| p0441[0...n] | Encoder commissioning serial number part 1 / Enc com ser_no 1                     |
| p0442[0...n] | Encoder commissioning serial number part 2 / Enc com ser_no 2                     |
| p0443[0...n] | Encoder commissioning serial number part 3 / Enc com ser_no 3                     |
| p0444[0...n] | Encoder commissioning serial number part 4 / Enc com ser_no 4                     |
| p0445[0...n] | Encoder commissioning serial number part 5 / Enc com ser_no 5                     |
| p0446[0...n] | Encoder SSI number of bits before the absolute value / Enc SSI bit before         |
| p0447[0...n] | Encoder SSI number of bits absolute value / Enc SSI bit val                       |
| p0448[0...n] | Encoder SSI number of bits after the absolute value / Enc SSI bit after           |
| p0449[0...n] | Encoder SSI number of bits filler bits / Enc SSI fill bits                        |
| p0453[0...n] | Pulse encoder evaluation zero speed measuring time / Enc_ev n_0 t_meas            |
| p0454[0...n] | Sensor Module configuration extended Part 2 / SM config ext 2                     |
| p0476[0...n] | Piston zero point calibration value / Piston 0 pt cal                             |
| p0493[0...n] | Zero mark selection input terminal / ZM_sel inp_term                              |
| p0494[0...n] | Equivalent zero mark input terminal / ZM_equiv inp_term                           |
| p2507[0...n] | LR absolute encoder adjustment status / Abs_enc_adj stat                          |
| p2525[0...n] | CO: LR encoder adjustment offset / Enc_adj offset                                 |
| p2733[0...n] | CO: LR encoder adjustment DDS / Enc_adj DDS                                       |
| p4600[0...n] | Motor temperature sensor 1 sensor type / Temp_sens 1 type                         |
| p4601[0...n] | Motor temperature sensor 2 sensor type / Temp_sens 2 type                         |
| p4602[0...n] | Motor temperature sensor 3 sensor type / Temp_sens 3 type                         |
| p4603[0...n] | Motor temperature sensor 4 sensor type / Temp_sens 4 type                         |
| p4630[0...n] | Absolute encoder linear measuring step factor / Abs_enc meas fact                 |
| p4631[0...n] | Cylinder distance per encoder revolution / x_cyl per rev                          |
| p4635[0...n] | Encoder scaling factor acceleration / Scale factor accel                          |
| p4643[0...n] | DRIVE-CLiQ encoder repeat telegram / DQ enc repeat                                |
| p4649[0...n] | Encoder function reserve amplitude limit incremental signals / Enc fct amp inc    |
| p4662[0...n] | Encoder characteristic type / Enc char_type                                       |
| p4663[0...n] | Encoder characteristic K0 / Enc char K0   |
| p4664[0...n] | Encoder characteristic K1 / Enc char K1   |
| p4665[0...n] | Encoder characteristic K2 / Enc char K2   |
| p4666[0...n] | Encoder characteristic K3 / Enc char K3   |
| p4670[0...n] | Analog sensor configuration / Ana_sens config                                     |
| p4671[0...n] | Analog sensor input / Ana_sens inp  |
| p4672[0...n] | Analog sensor channel A voltage at actual value zero / Ana_sens A U at 0          |
| p4673[0...n] | Analog sensor channel A voltage per encoder period / Ana_sens A U/per             |
| p4674[0...n] | Analog sensor channel B voltage at actual value zero / Ana_sens B U at 0          |
| p4675[0...n] | Analog sensor channel B voltage per encoder period / Ana_sens B U/per             |
| p4676[0...n] | Analog sensor range limit threshold / Ana_sens lim thr                            |
| p4677[0...n] | Analog sensor LVDT configuration / Ana_sens LVDT conf                             |
| p4678[0...n] | Analog sensor LVDT ratio / An_sens LVDT ratio                                     |
| p4679[0...n] | Analog sensor LVDT phase / An_sens LVDT ph  |
| p4680[0...n] | Zero mark monitoring tolerance permissible / ZM_mon tol perm                      |
| p4681[0...n] | Zero mark monitoring tolerance window limit 1 positive / ZM tol lim 1 pos         |
| p4682[0...n] | Zero mark monitoring tolerance window limit 1 negative / ZM tol lim 1 neg         |
| p4683[0...n] | Zero mark monitoring tolerance window alarm threshold positive / ZM tol A_thr pos |
| p4684[0...n] | Zero mark monitoring tolerance window alarm threshold negative / ZM tol A_thr neg |
| p4685[0...n] | Speed actual value average value generation / n_act mean val                      |
| p4686[0...n] | Zero mark minimum length / ZM min length  |

### 2.3.4 Parameters for motor data sets (MDS)

---

Chapter "Data sets"

---

The following list contains the parameters that are dependent on the motor data sets.

Product: SINAMICS S120/S150, Version: 5206900, Language: eng, Type: MDS

|              |   |
|--------------|---|
| p0131[0...n] | Motor component number / Mot comp_no                                      |
| p0133[0...n] | Motor configuration / Motor config  |
| p0300[0...n] | Motor type selection / Mot type sel                                       |
| p0301[0...n] | Motor code number selection / Mot code no sel                             |
| r0302[0...n] | Motor code number of motor with DRIVE-CLiQ / Mot code mot w DQ            |
| r0303[0...n] | Motor with DRIVE-CLiQ status word / Motor w DQ ZSW                        |
| p0304[0...n] | Rated motor voltage / Mot U_rated   |
| p0305[0...n] | Rated motor current / Mot I_rated   |
| p0306[0...n] | Number of motors connected in parallel / Mot parallel qty                 |
| p0307[0...n] | Rated motor power / Mot P_rated   |
| p0308[0...n] | Rated motor power factor / Mot cos phi rated                              |
| p0309[0...n] | Rated motor efficiency / Mot eta_rated                                    |
| p0310[0...n] | Cylinder piston diameter / Cyl piston diam                                |
| p0310[0...n] | Rated motor frequency / Mot f_rated                                       |
| p0311[0...n] | Cylinder piston rod diameter A side / Cyl PistRodDiam A                   |
| p0311[0...n] | Rated motor speed / Mot n_rated   |
| p0311[0...n] | Rated motor velocity / Mot v_rated  |
| p0312[0...n] | Cylinder piston rod diameter B side / Cyl rod diam B                      |
| p0312[0...n] | Rated motor torque / Mot M_rated  |
| p0312[0...n] | Rated motor force / Mot F_rated   |
| p0313[0...n] | Cylinder piston stroke / Cyl pist stroke                                  |
| r0313[0...n] | CO: Motor pole pair number, actual (or calculated) / MotPolePair no act   |
| p0314[0...n] | Cylinder dead volume A side / Cyl_dead vol A                              |
| p0314[0...n] | Motor pole pair number / Mot PolePair no                                  |
| p0315[0...n] | Cylinder dead volume B side / Cyl_dead vol B                              |
| p0315[0...n] | Motor pole pair width / Mot PolePair width                                |
| p0316[0...n] | Motor torque constant / Mot kT  |
| p0316[0...n] | Motor force constant / Mot kT   |
| p0317[0...n] | Motor voltage constant / Mot kE   |
| p0318[0...n] | Motor stall current / Mot I_standstill                                    |
| p0319[0...n] | Motor stall torque / Mot M_standstill                                     |
| p0319[0...n] | Motor stall force / Mot F_standstill                                      |
| p0320[0...n] | Motor rated magnetizing current/short-circuit current / Mot I_mag_rated   |
| p0322[0...n] | Maximum motor speed / Mot n_max   |
| p0322[0...n] | Motor maximum velocity / Mot v_max  |
| p0323[0...n] | Maximum motor current / Mot I_max   |
| p0324[0...n] | Winding maximum speed / Winding n_max                                     |
| p0324[0...n] | Winding maximum velocity / Winding v_max                                  |
| p0325[0...n] | Motor pole position identification current 1st phase / Mot PolID I 1st Ph |
| p0326[0...n] | Motor stall torque correction factor / Mot M_stall_corr                   |
| p0326[0...n] | Motor stall force correction factor / Mot F_stall_corr                    |
| p0327[0...n] | Optimum motor load angle / Mot phi_load opt                               |
| p0328[0...n] | Motor reluctance torque constant / Mot kT_reluctance                      |
| p0328[0...n] | Motor reluctance force constant / Mot kT_reluctance                       |
| p0329[0...n] | Motor pole position identification current / Mot PolID current            |
| r0330[0...n] | Rated motor slip / Mot slip_rated   |

|              |  |
|--------------|--|
| r0331[0...n] | Actual motor magnetizing current/short-circuit current / Mot I_mag_rtd act       |
| r0332[0...n] | Rated motor power factor / Mot cos phi rated                                     |
| r0333[0...n] | Rated motor torque / Mot M_rated   |
| r0334[0...n] | Actual motor-torque constant / Mot kT act  |
| r0334[0...n] | Actual motor force constant / Mot kT act   |
| p0335[0...n] | Motor cooling type / Mot cool type   |
| r0336[0...n] | Actual rated motor frequency / Mot f_rated act                                   |
| r0337[0...n] | Rated motor EMF / Mot EMF_rated  |
| p0338[0...n] | Motor limit current / Mot I_limit  |
| r0339[0...n] | Rated motor voltage / Mot U_rated  |
| p0341[0...n] | Cylinder weight / Cyl weight   |
| p0341[0...n] | Motor moment of inertia / Mot m_inert  |
| p0341[0...n] | Motor weight / Mot weight  |
| p0342[0...n] | Ratio between the total and motor moment of inertia / Mot m_inert ratio          |
| p0343[0...n] | Valve/cylinder configuration / Valve/cyl config                                  |

| r0381[0...n] | Motor damping inductance q axis / Mot L_damp q                                   |

## 2 Parameters

### 2.3 Parameters for data sets

|              |   |
|--------------|---|
| r0382[0...n] | Motor magnetizing inductance transformed / Lh d axis saturated / Mot L_m tr/Lhd sat |
| r0383[0...n] | Motor magnetizing inductance q axis saturated / Mot L_magn q sat                    |
| r0384[0...n] | Motor rotor time constant / damping time constant d axis / Mot Tc_rotor/T_Dd        |
| r0385[0...n] | Motor damping time constant q axis / Mot L_damping q                                |
| r0386[0...n] | Motor stator leakage time constant / Mot Tc_stator leak                             |
| r0387[0...n] | Motor stator leakage time constant q axis / Mot Tc_Sleak /T_Sq                      |
| p0388[0...n] | Motor stall torque correction factor for p1402.6 = 1 / Mot M_stallCorrNew           |
| p0389[0...n] | Excitation rated no-load current / Exc I_noload_rated                               |
| p0390[0...n] | Rated excitation current / Exc I_rated  |
| p0391[0...n] | Current controller adaptation starting point Kp / I_adpt pt Kp                      |
| p0392[0...n] | Current controller adaptation starting point Kp adapted / I_adpt pt Kp adpt         |
| p0393[0...n] | Current controller adaptation P gain adaptation / I_adpt Kp adpt                    |
| p0393[0...n] | Current controller adaptation P gain scaling / I_adpt Kp scal                       |
| r0395[0...n] | Actual stator resistance / R_stator act   |
| r0396[0...n] | Actual rotor resistance / R_rotor act   |
| p0397[0...n] | Angle magnetic decoupling maximum angle / Magn decpl max_ang                        |
| p0398[0...n] | Angle magn decoupling (cross saturation) coeff 1 / Magn decoupl C1                  |
| p0399[0...n] | Angle magn decoupling (cross saturation) coeff 3 / Magn decoupl C3                  |
| p0530[0...n] | Bearing version selection / Bearing vers sel  |
| p0531[0...n] | Bearing code number selection / Bearing codeNo sel                                  |
| p0532[0...n] | Bearing maximum speed / Bearing n_max   |
| p0532[0...n] | Bearing maximum velocity / Bearing v_max  |
| p0541[0...n] | Load gearbox code number / Load grbx code no  |
| p0542[0...n] | Load gearbox maximum speed / Load grbx n_max  |
| p0543[0...n] | Load gearbox maximum torque / Load grbx M_max                                       |
| p0544[0...n] | Load gearbox overall ratio numerator / Load grbx ratio N                            |
| p0545[0...n] | Load gearbox overall ratio denominator / Load grbx ratio D                          |
| p0546[0...n] | Load gearbox direction of rotation inversion / Load grbx dir inv                    |
| p0547[0...n] | Load gearbox moment of inertia / Load grbx m_inert                                  |
| p0550[0...n] | Brake version / Brake version   |
| p0551[0...n] | Brake code number / Brake code no   |
| p0552[0...n] | Maximum brake speed / Brake n_max   |
| p0553[0...n] | Brake holding torque / Brake M_hold   |
| p0554[0...n] | Brake moment of inertia / Brake m_inert   |
| p0600[0...n] | Motor temperature sensor for monitoring / Mot temp_sensor                           |
| p0601[0...n] | Motor temperature sensor type / Mot_temp_sens type                                  |
| p0604[0...n] | Mot_temp_mod 2: sensor alarm threshold / Mod 2: sens A_thr                          |
| p0605[0...n] | Mot_temp_mod 1/2 sensor threshold and temperature value / Mod 1/2 sens thr_T        |
| p0606[0...n] | Mot_temp_mod 2: sensor timer / Mod 2:sens timer                                     |
| p0607[0...n] | Temperature sensor fault timer / Sensor fault time                                  |
| p0610[0...n] | Motor overtemperature response / Mot temp response                                  |
| p0611[0...n] | I2t motor model thermal time constant / I2t MotMod Tc                               |
| p0612[0...n] | Mot_temp_mod activation / Mot_temp_mod act  |
| p0613[0...n] | Mot_temp_mod 1/3 ambient temperature / Mod 1/3 amb_temp                             |
| p0614[0...n] | Thermal resistance adaptation reduction factor / Therm R_adapt red                  |
| p0615[0...n] | Mot_temp_mod 1 (I2t) fault threshold / I2t F thr                                    |
| p0616[0...n] | Motor overtemperature alarm threshold 1 / Mot temp alarm 1                          |
| p0617[0...n] | Stator thermally relevant iron component / Stat therm iron                          |
| p0618[0...n] | Stator thermally relevant copper component / Stat therm copper                      |
| p0619[0...n] | Rotor thermally relevant weight / Rotor therm weight                                |
| p0620[0...n] | Thermal adaptation, stator and rotor resistance / Mot therm_adpt R                  |
| p0621[0...n] | Identification stator resistance after restart / ID rst restart                     |
| p0622[0...n] | Motor excitation time for Rs_ident after switching on again / t_excit Rs_id         |
| p0624[0...n] | Motor temperature offset PT100 / Mot T_offset PT100                                 |
| p0625[0...n] | Motor ambient temperature during commissioning / Mot amb_temp com                   |

|              |  |
|--------------|--|
| p0626[0...n] | Motor overtemperature, stator core / Mot T_over core                               |
| p0627[0...n] | Motor overtemperature, stator winding / Mot T_over stator                          |

### 2.3.5 Parameters for power unit data sets (PDS)

---

#### Note

References: SINAMICS S120 Function Manual Drive Functions  
Chapter "Data sets"

---

The following list contains the parameters that are dependent on the power unit data sets.

Product: SINAMICS S120/S150, Version: 5206900, Language: eng, Type: PDS

|              |   |
|--------------|---|
| p0121[0...n] | Power unit component number / PU comp_no  |
| p0124[0...n] | Power unit detection via LED / PU detection LED                                 |
| p0125[0...n] | Activate/deactivate power unit components / PU_comp act/deact                   |
| r0126[0...n] | Power unit components active/inactive / PU comp act/inact                       |
| r0127[0...n] | Power unit EEPROM data version / PU EEPROM version                              |
| r0128[0...n] | Power unit firmware version / PU FW version                                     |
| r0200[0...n] | Power unit code number actual / PU code no act                                  |
| p0201[0...n] | Power unit code number / PU code no   |
| r0203[0...n] | Actual power unit type / PU actual type   |
| r0204[0...n] | Power unit hardware properties / PU HW properties                               |
| p0205[0...n] | Valve rated voltage / Valve Un  |
| p0206[0...n] | Valve transition point flow rate / Valve trans flow                             |
| p0207[0...n] | Valve transition point voltage / Valve trans U                                  |
| p0208[0...n] | Valve rated flow rate / Valve Vn  |
| p0209[0...n] | Valve rated pressure drop / Valve Pn  |
| p0211[0...n] | Valve, flow rate ratio A to B side / Flowrate_ratio A/B                         |
| p0216[0...n] | Valve natural frequency / Valve fn  |
| p0217[0...n] | Valve damping / Valve D   |
| p0218[0...n] | Cylinder safety configuration / Cyl safety config                               |
| p0222[0...n] | Valve precontrol pressure / Valve p_prectrl                                     |
| p0230[0...n] | Manipulated variable inhibit time / Manip var t_inhib                           |
| p0231[0...n] | Power enable inhibit time / Pow_enab t_inhib                                    |
| p0232[0...n] | Valve monitoring time / Valve t_mon   |
| p0240[0...n] | Pressure sensor A reference value at 10 V / Sensor A ref 10V                    |
| p0241[0...n] | Pressure sensor A offset correction / Sensor A offset                           |
| p0242[0...n] | Pressure sensor B reference value at 10 V / Sensor B ref 10V                    |
| p0243[0...n] | Pressure sensor B offset correction / Sensor B offset                           |
| p0244[0...n] | Pressure sensor P reference value at 10 V / Sensor P ref 10V                    |
| p0245[0...n] | Pressure sensor P offset correction / Sensor P offs_corr                        |
| p0251[0...n] | Power unit heat sink fan operating hours counter / PU fan t_op                  |
| p0254[0...n] | Operating hours counter power unit fan inside the converter / PU inner fan t_op |
| r0277[0...n] | Power unit heat sink fan wear counter / PU fan wear_count                       |
| p0895[0...n] | BI: Activate/deactivate power unit components / PU_comp act/deact               |
| p1832[0...n] | Valve offset / Valve offset   |
| p3469[0...n] | Latch delay time correction, zero crossover detection / t_latch corr PLL        |
| p3901[0...n] | Power unit EEPROM Vdc offset calibration / PU EEPROM Vdc offs                   |
| p7001[0...n] | Par_circuit power units enable / PU enable                                      |
| r7002[0...n] | CO: Par_circuit status power units / Status PU                                  |
| r7020[0...n] | CO: Par_circuit deviation current in phase U / Phase U curr dev                 |
| r7021[0...n] | CO: Par_circuit deviation current in phase V / Phase V curr dev                 |
| r7022[0...n] | CO: Par_circuit deviation current in phase W / Phase W curr dev                 |
| r7030[0...n] | CO: Par_circuit DC link voltage deviation / Vdc deviation                       |
| p7040[0...n] | Par_circuit correction valve lockout time phase U / Comp t_lockout U            |
| p7042[0...n] | Par_circuit correction valve lockout time phase V / Comp t_lockout V            |
| p7044[0...n] | Par_circuit correction valve lockout time phase W / Comp t_lockout W            |
| r7050[0...n] | Par_circuit circulating current phase U / Circ_I_phase U                        |

|              |   |
|--------------|---|
| r7051[0...n] | Par_circuit circulating current phase V / Circ_I_phase V                            |
| r7052[0...n] | Par_circuit circulating current phase W / Circ_I_phase W                            |
| r7198[0...n] | Par_connection power unit temperatures cooling unit intake / PU temp RKA intake     |
| r7199[0...n] | Par_circuit power unit temperatures capacitor air discharge / PU temp capacitor     |
| r7200[0...n] | Par_circuit power unit overload I2t / PU overload I2t                               |
| r7201[0...n] | CO: Par_circuit power unit temperatures max. inverter / PU temp max inv             |
| r7202[0...n] | Par_circuit power unit temperatures max. depletion layer / PU TempMaxDepLayer       |
| r7203[0...n] | CO: Par_circuit power unit temperatures max. rectifier / PU temp max rect           |
| r7204[0...n] | CO: Par_circuit power unit temperatures air intake / PU temp air intake             |
| r7205[0...n] | Par_circuit power unit temperatures electronics / PU temp electr                    |
| r7206[0...n] | Par_circuit power unit temperatures inverter 1 / PU temp inv 1                      |
| r7207[0...n] | Par_circuit power unit temperatures inverter 2 / PU temp inv 2                      |
| r7208[0...n] | Par_circuit power unit temperatures inverter 3 / PU temp inv 3                      |
| r7209[0...n] | Par_circuit power unit temperatures inverter 4 / PU temp inv 4                      |
| r7210[0...n] | Par_circuit power unit temperatures inverter 5 / PU temp inv 5                      |
| r7211[0...n] | Par_circuit power unit temperatures inverter 6 / PU temp inv 6                      |
| r7212[0...n] | Par_circuit power unit temperatures inverter 1 / PU temp rect 1                     |
| r7213[0...n] | Par_circuit power unit temperatures inverter 2 / PU temp rect 2                     |
| r7214[0...n] | Par_circuit power unit temperatures depletion layer 1 / PU temp DepLayer 1          |
| r7215[0...n] | Par_circuit power unit temperatures depletion layer 2 / PU temp DepLayer 2          |
| r7216[0...n] | Par_circuit power unit temperatures depletion layer 3 / PU temp DepLayer 3          |
| r7217[0...n] | Par_circuit power unit temperatures depletion layer 4 / PU temp DepLayer 4          |
| r7218[0...n] | Par_circuit power unit temperatures depletion layer 5 / PU temp DepLayer 5          |
| r7219[0...n] | Par_circuit power unit temperatures depletion layer 6 / PU temp DepLayer 6          |
| r7220[0...n] | CO: Par_circuit drive output current maximum / Drv I_outp max                       |
| r7220[0...n] | Infeed par_circuit absolute current value motoring permissible / INF I_abs mot perm |
| r7221[0...n] | Infeed par_circuit absolute current regenerating permissible / INF I_abs RegenPerm  |
| r7222[0...n] | CO: Par_circuit absolute current actual value / I_act AbsV                          |
| r7223[0...n] | CO: Par_circuit phase current actual value phase U / I_phase U ActV                 |
| r7224[0...n] | CO: Par_circuit phase current actual value phase V / I_phase V ActV                 |
| r7225[0...n] | CO: Par_circuit phase current actual value phase W / I_phase W ActV                 |
| r7226[0...n] | CO: Par_circuit phase current actual value phase U offset / I_phase U offset        |
| r7227[0...n] | CO: Par_circuit phase current actual value phase V offset / I_phase V offset        |
| r7228[0...n] | CO: Par_circuit phase current actual value phase W offset / I_phase W offset        |
| r7229[0...n] | CO: Par_circuit phase current actual value sum U, V, W / I_phase sum UVW            |
| r7230[0...n] | CO: Par_circuit DC link voltage actual value / Vdc_ActV                             |
| r7231[0...n] | CO: Par_circuit phase voltage actual value phase U / U_phase U ActV                 |
| r7232[0...n] | CO: Par_circuit phase voltage actual value phase V / U_phase V ActV                 |
| r7233[0...n] | CO: Par_circuit phase voltage actual value phase W / U_phase W ActV                 |
| r7240[0...n] | Par_circuit gating unit status word 1 / Gating unit ZSW1                            |
| r7740[0...n] | IGBT power cycling counter valve 1 / IGBT load count 1                              |
| r7741[0...n] | IGBT power cycling counter valve 2 / IGBT load count 2                              |
| r7742[0...n] | IGBT power cycling counter valve 3 / IGBT load count 3                              |
| r7743[0...n] | IGBT power cycling counter valve 4 / IGBT load count 4                              |
| r7744[0...n] | IGBT power cycling counter valve 5 / IGBT load count 5                              |
| r7745[0...n] | IGBT power cycling counter valve 6 / IGBT load count 6                              |
| p7786[0...n] | Service report / Service report   |
| p9671[0...n] | SI module identifier Hydraulic Module / Module ID HM                                |
| p9671[0...n] | SI module identifier Motor Module / Module ID MM                                    |

## 2.4 Parameters for write protection and know-how protection

### Note

References: SINAMICS S120 Function Manual Drive Functions  
Chapter "Write protection and know-how protection"

### 2.4.1 Parameters with "WRITE\_NO\_LOCK"

The following list contains the parameters with the "WRITE\_NO\_LOCK" attribute.

These parameters are not affected by the write protection.

Product: SINAMICS S120/S150, Version: 5206900, Language: eng, Type: WRITE\_NO\_LOCK

|              |   |
|--------------|---|
| p0003        | BOP access level / BOP acc_level                                      |
| p0009        | Device commissioning parameter filter / Dev com par_filt              |
| p0124[0...n] | Main component detection using LED / M_comp detect LED                |
| p0124[0...n] | Power unit detection via LED / PU detection LED                       |
| p0144[0...n] | Sensor Module detection via LED / SM detection LED                    |
| p0144[0...n] | Voltage Sensing Module detection via LED / VSM detection LED          |
| p0154[0...n] | Voltage Sensing Module 2 detection via LED / VSM2 detection LED       |
| p0154        | Terminal Module detection via LED / TM detection LED                  |
| p0154        | DRIVE-CLiQ Hub Module detection via LED / Hub detection LED           |
| p0972        | Drive unit reset / Drv_unit reset                                     |
| p0976        | Reset and load all parameters / Reset load all par                    |
| p0977        | Save all parameters / Save all par                                    |
| p1903        | BI: Data identification control / Data ID ctrl                        |
| p2035        | Fieldbus interface USS PIV drive object number / Fieldbus USS DO_no   |
| p2102        | BI: Acknowledge all faults / Ackn all faults                          |
| p2111        | Alarm counter / Alarm counter   |
| p3100        | RTC time stamp mode / RTC t_stamp mode                                |
| p3101[0...1] | Setting UTC time / Set UTC time                                       |
| p3103        | UTC synchronization process / UTC sync_process                        |
| p3950        | Service parameter / Serv par  |
| p3981        | Acknowledge drive object faults / Ackn DO faults                      |
| p3985        | Master control mode selection / PcCtrl mode select                    |
| p4700[0...1] | Trace control / Trace control   |
| p4701        | Measuring function control / Meas fct ctrl                            |
| p4703[0...1] | Trace options / Trace options   |
| p4707        | Measurement function configuration / Meas fct config                  |
| p4710[0...1] | Trace trigger condition / Trace Trig_cond                             |
| p4711[0...5] | Trace trigger signal / Trace trig_signal                              |
| p4712[0...1] | Trace trigger threshold / Trace trig_thr                              |
| p4713[0...1] | Trace tolerance band trigger threshold 1 / Trace trig thr 1           |
| p4714[0...1] | Trace tolerance band trigger threshold 2 / Trace trig thr 2           |
| p4715[0...1] | Trace bit mask trigger, bit mask / Trace trig mask                    |
| p4716[0...1] | Trace bit mask trigger trigger condition / Trace Trig_cond            |
| p4717        | Measuring function number of averaging operations / Meas fct avg qty  |
| p4718        | Measuring function number of stabilizing periods / MeasFct StabPerQty |
| p4720[0...1] | Trace recording cycle / Trace record_cyc                              |
| p4721[0...1] | Trace recording time / Trace record_time                              |

## 2.4.2 Parameters with "KHP\_WRITE\_NO\_LOCK"

The following list contains the parameters with the "KHP\_WRITE\_NO\_LOCK" attribute.

These parameters are not affected by the know-how protection.

Product: SINAMICS S120/S150, Version: 5206900, Language: eng, Type: KHP\_WRITE\_NO\_LOCK

|               |   |
|---------------|---|
| p0003         | BOP access level / BOP acc_level                                    |
| p0009         | Device commissioning parameter filter / Dev com par_filt            |
| p0124[0...n]  | Main component detection using LED / M_comp detect LED              |
| p0124[0...n]  | Power unit detection via LED / PU detection LED                     |
| p0144[0...n]  | Sensor Module detection via LED / SM detection LED                  |
| p0144[0...n]  | Voltage Sensing Module detection via LED / VSM detection LED        |
| p0154[0...n]  | Voltage Sensing Module 2 detection via LED / VSM2 detection LED     |
| p0154         | Terminal Module detection via LED / TM detection LED                |
| p0154         | DRIVE-CLiQ Hub Module detection via LED / Hub detection LED         |
| p0972         | Drive unit reset / Dry_unit reset                                   |

| p9210         | Flashing component number / Flash comp_no                           |
| p9211         | Flash function / Flash fct  |
| p9484         | BICO interconnections search signal source / BICO s_s srch          |

### 2.4.3 Parameters with "KHP\_ACTIVE\_READ"

The following list contains the parameters with the "KHP\_ACTIVE\_READ" attribute.

These parameters can also be read with activated know-how protection.

Product: SINAMICS S120/S150, Version: 5206900, Language: eng, Type: KHP\_ACTIVE\_READ

|               |  |
|---------------|--|
| p0015         | Macro drive unit / Macro drv unit  |
| p0015         | Macro drive object / Macro DO  |

Fig. 3-4 1030 – Handling BICO technology

### Handling BICO technology

**Binector:**  Binectors are binary signals that can be freely interconnected (BO = Binector Output). They represent a bit of a "BO:" display parameter (e.g. bit 15 from r0723).

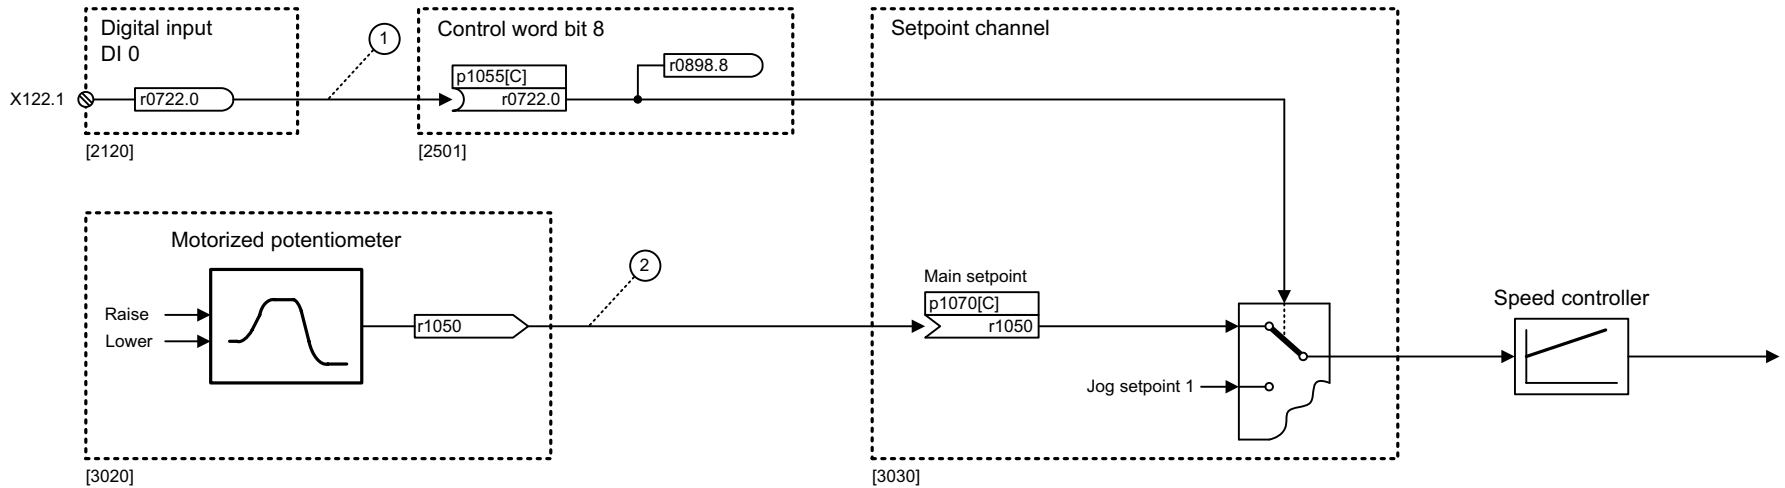

**Connector:**  Connectors are bit fields or numerical values that can be freely interconnected (e.g. "analog signals", like percentage variables, speeds or torques). Connectors are also "CO:" display parameters (CO = Connector Output).

**Parameterization:**

At the signal destination, the required binector or connector is selected using appropriate parameters:  
"Bl:" parameter for binectors (Bl = Binector Input)  
or  
"Cl:" parameter for connectors (Cl = Connector Input)

**Example:**

The main setpoint for the speed controller (Cl: p1070) should be received from the output of the motorized potentiometer (CO: r1050) and the "jog" command (Bl: p1055) from digital input DI 0 (BO: r0722.0, X122.1 terminal) on the CU320.

**Parameterizing steps:**

- ① p1055[0] = r0722.0 Terminal X122.1 acts as "Jog bit 0".
- ② p1070[0] = r1050 The output of the motorized potentiometer acts as main setpoint for the speed controller.

DRIVE-CLIQ

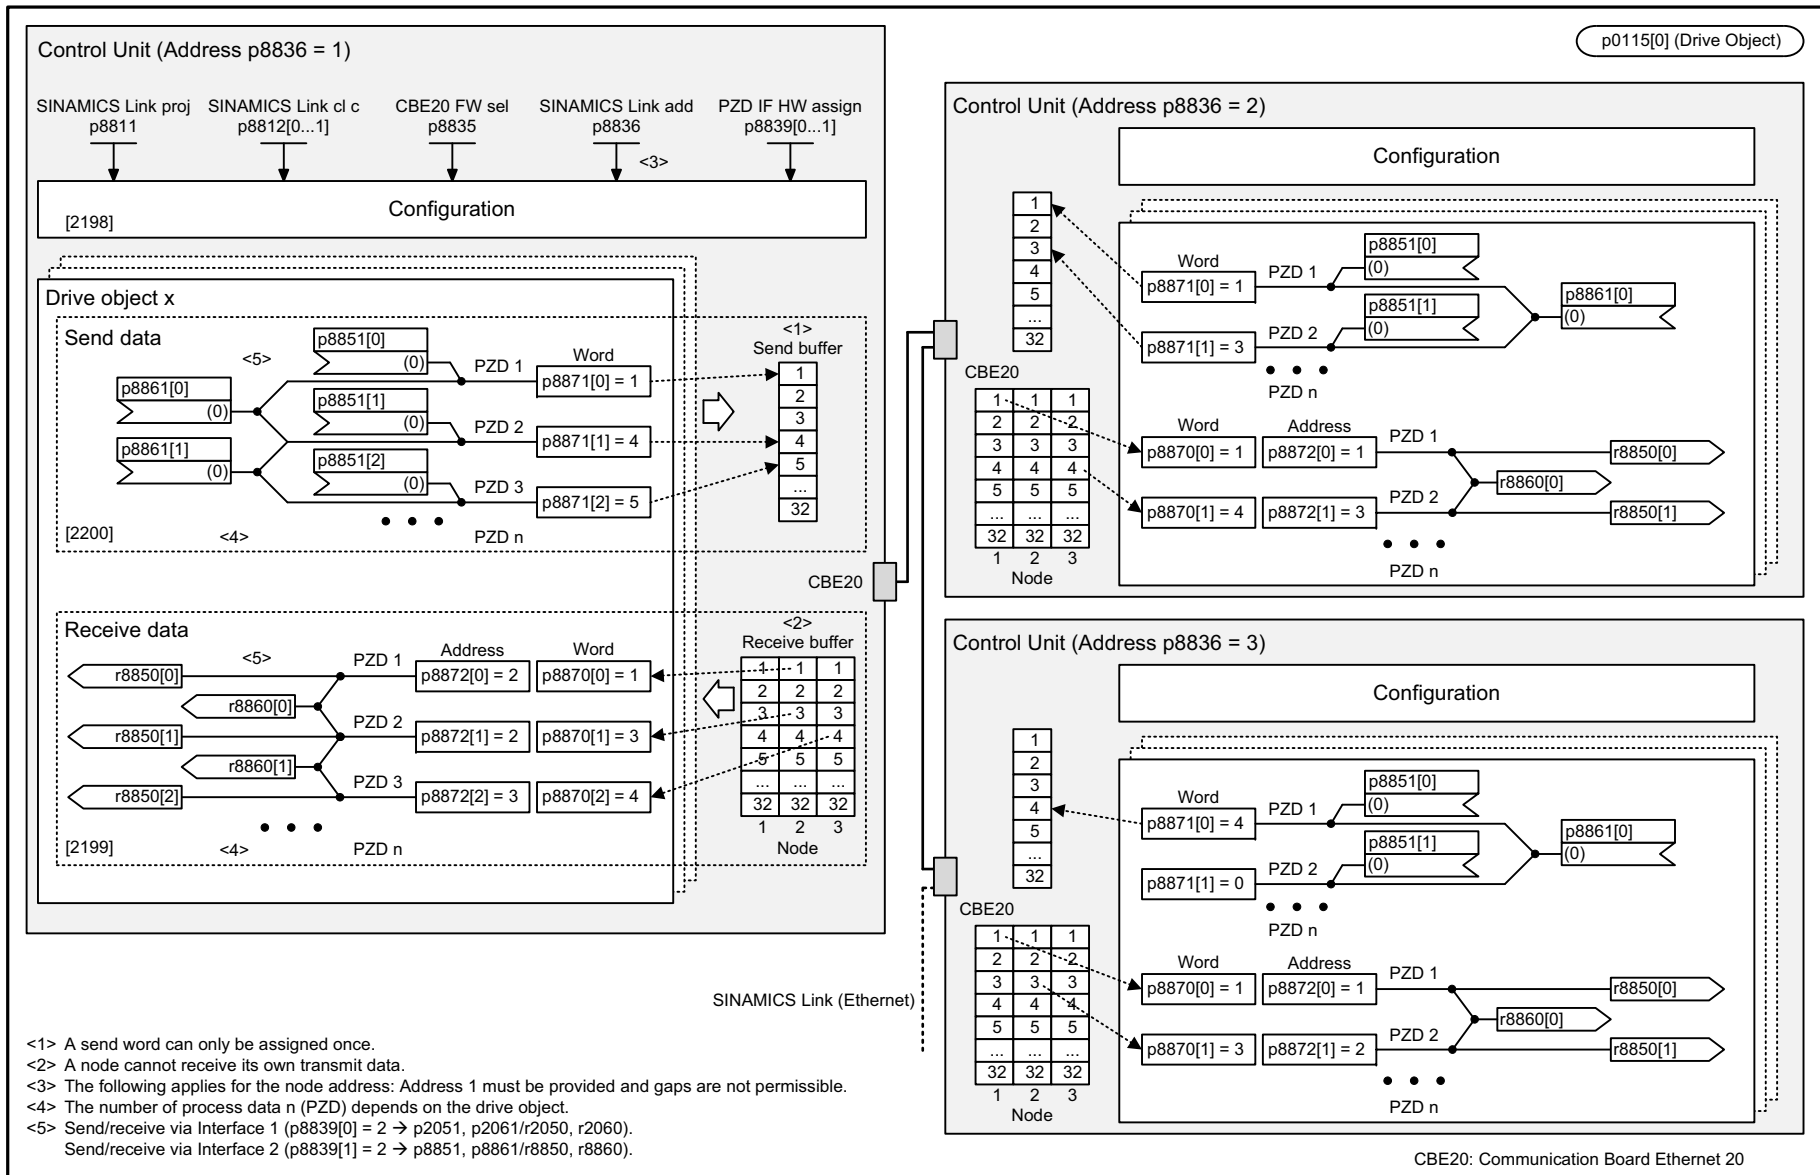

<1> The drive object CU\_LINK only exists for automation systems with SINAMICS Integrated (e.g. SIMOTION D, SINUMERIK NCU) and the corresponding controller extension (e.g. CX32-2, NX10).  
On the SINAMICS Integrated, each controller extension is represented by a drive object CU\_LINK.  
<2> p8800: CU\_LINK address.  
Address of the controller extension, represented by the drive object CU\_LINK. The address correlates with the DRIVE-CLIQ socket of the Control Unit connected/configured to the controller extension configured.  
Value range: See p0918 (PROFIBUS address)  
The parameter p8800 is only readable through non-cyclic parameter access via DPV1 services.

<1> Depending on the drive object, only specific telegrams can be used.  
 <2> If p0922 = 999 is changed to another value, the telegram is automatically assigned as specified in [2415] - [2423].  
 If p0922 ≠ 999 is changed to p0922 = 999, the "old" telegram assignment is maintained as specified in [2415] - [2423].  
 <3> Can be freely connected.  
 <4> The maximum number of PZD words depends on the drive object type.  
 <5> Only for SERVO (SINAMICS S120).  
 <6> Only if the "Basic positioner" function module is active (r0108.4 = 1).  
 <7> Only if the "DSC with Spline" function module is active (r0108.6 = 1).

☐ = Position encoder signal

- <1> Depending on the drive object, only specific telegrams can be used.
- <2> If p0922 = 999 is changed to another value, the telegram is automatically assigned as specified in [2415] - [2423].  
If p0922 ≠ 999 is changed to p0922 = 999, the "old" telegram assignment is maintained as specified in [2415] - [2423].
- <3> The maximum number of PZD words depends on the drive object type.
- <4> Only if the "DSC with Spline" function module is active (r0108.6 = 1).
- <5> Only if the "Spindle diagnostics" function module is active (r0108.11 = 1).
- <6> Only if the "Controller parameters adaptation" function module is active (r0171.29 = 1).

- <1> The number of PZD send words depends on the drive object type.
- <2> A PZD send word can either be supplied via connector input p2051[x] (WORD) or via p2061[x] (DWORD). The two corresponding connector inputs cannot be interconnected.
- <3> Physical word and double word values are inserted in the telegram as referenced variables. p200x apply as reference variables (telegram contents = 4000 hex or 4000 0000 hex in the case of double words, if the input variable has the value p200x). The following applies for temperature values: 100° C → 100 % = 4000 hex or 4000 0000 hex; 0° C → 0 %.
- <4> To comply with the PROFIdrive profile, send word 1 must be used as status word 1 (ZSW1), not as DWORD.

- <2> The number of PZD receive words depends on the drive object type.
- <3> When interconnecting a connector output multiple times all the connector inputs must have either Integer or FloatingPoint data type.
- <4> Using the two connector-binector converters, two of the PZD receive words 3 to 20 resp. 5 to 20 can be converted into binectors for continued interconnection.
- <5> The following representation applies for words: 4000 hex = 100 %. The reference variables p200x apply for the ongoing interconnection (100 % → p200x).  
The following applies for temperature values:  
100 °C → 100 % = 4000 hex; 0 °C → 0 %.
- <6> Only for DO CU\_G, CU\_S.

Fig. 3-157 3010 – Fixed speed setpoints

Fig. 3-158 3020 – Motorized potentiometer

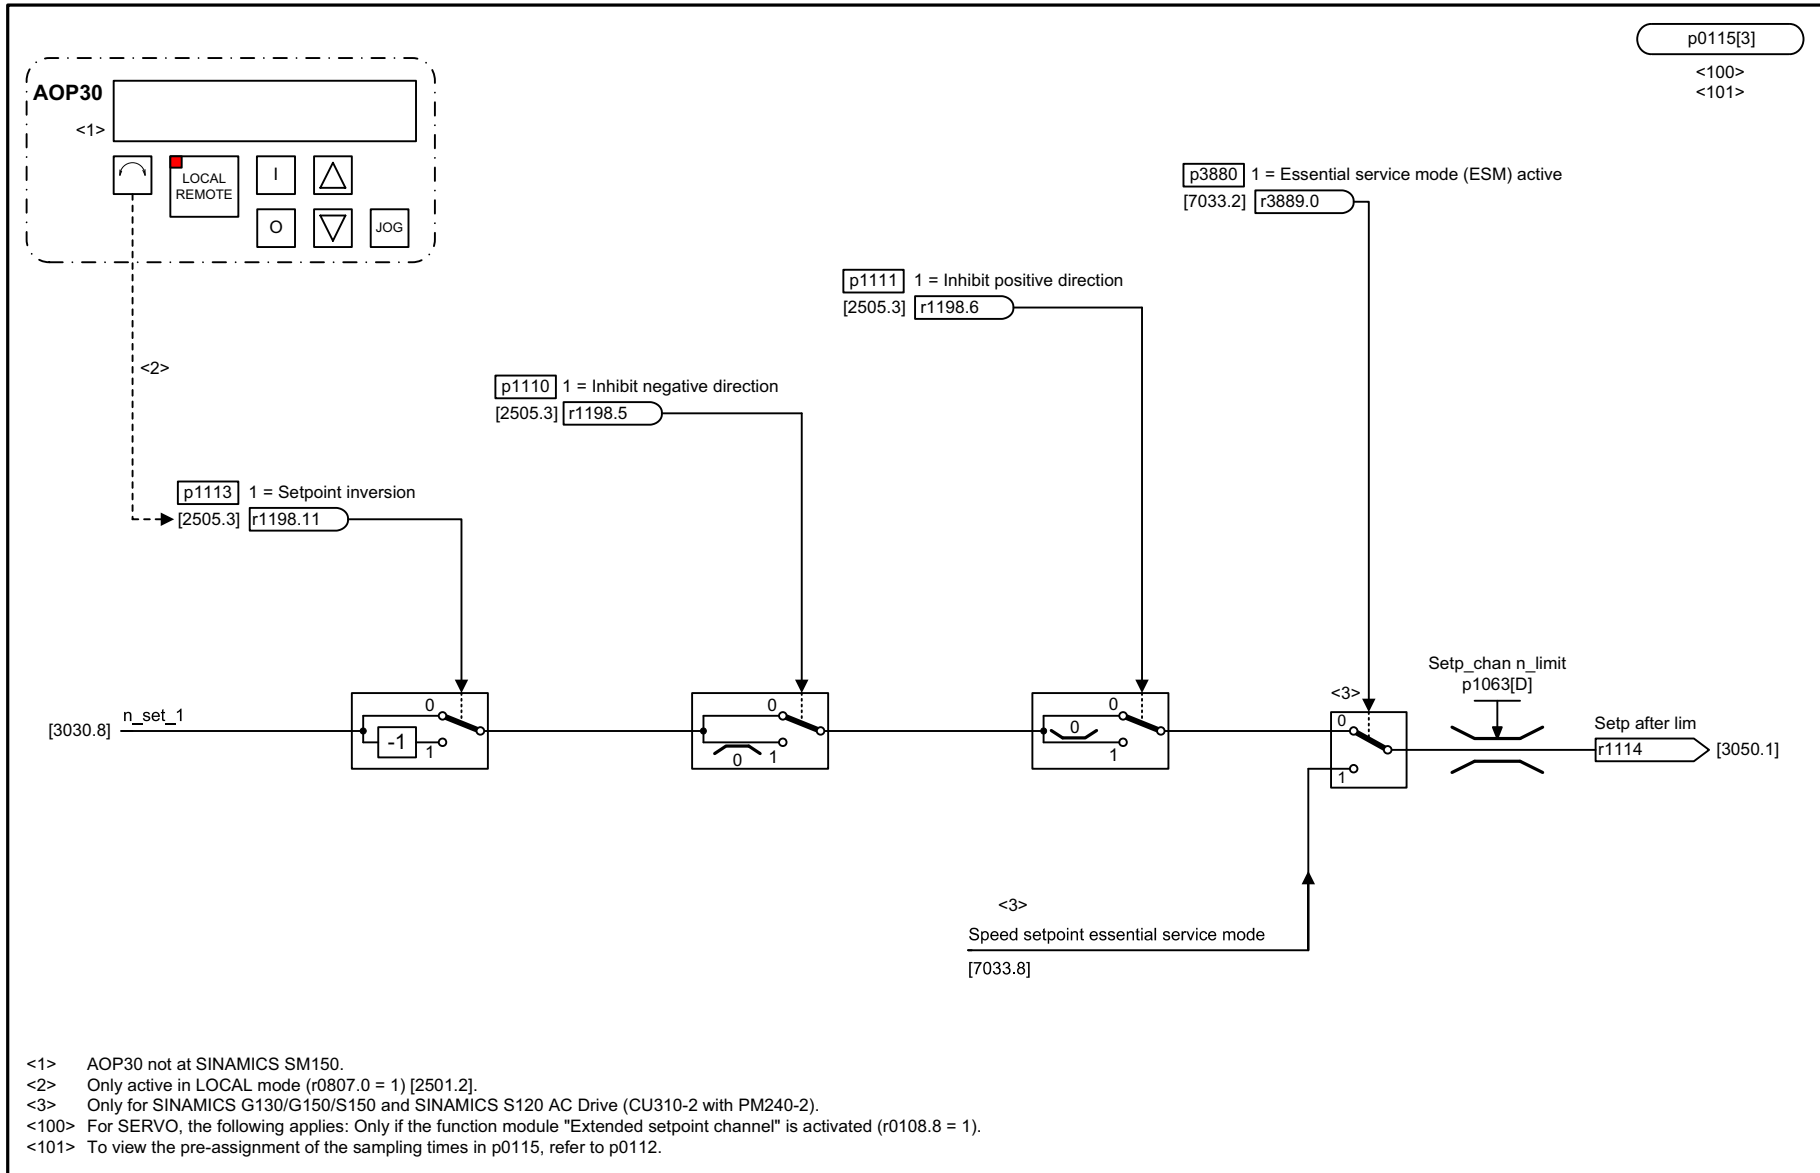

- <1> AOP30 not at SINAMICS SM150.
- <2> Only active in LOCAL mode (r0807.0 = 1) [2501.2].
- <3> Jogging can only be activated in the following operating states (sequencer see [2610]):  
 - For SERVO and VECTOR: In the "Ready for switching on (S2)" operating state.  
 - For VECTORGL: In the "Operation (S4)" operating state.
- <4> Only if control priority is with control panel with speed setpoint input.
- <5> With simultaneous jog 1 and 2 (p1055 = p1056 = 1) the last setpoint remains effective (Freeze ramp-function generator).
- <6> Interpolation only for VECTOR.
- <100> For SERVO, the following applies: Only if the function module "extended setpoint channel" is activated (r108.8 = 1).
- <101> To view the pre-assignment of the sampling times in p0115, refer to p0112.

[4010.8] <1> If no reference cam exists, the axis directly moves to the zero mark (in the defined start direction). Without a reference cam, the tolerance bandwidth is not evaluated.  
 <2> When "flying referencing" is selected (passive referencing, p2597 = 1 signal), this function diagram is of no significance => refer to [3614].  
 <3> The connector outputs are only supplied with values from here if the "referencing" mode is active.  
 <4> The reversing cams are low active. When a cam is actuated, motion (reference cam search) is continued in the opposite direction.  
 <5> Reference point setting is only effective in the initial state [3625].

<1> If connector input p2654 is assigned a connector input <> 0, the control signals "select positioning type", "direction selection positive" and "direction input negative" are internally supplied with values from this output.  
Based on the value of the connector input, the following IDs are evaluated xxXx:  
xx0x = absolute => p2648; xx1x = relative => p2648; xx2x = ABS\_POS => p2648, p2651; xx3x = ABS\_NEG => p2648, p2652.

<2> Only evaluated with transfer type "edge evaluation" (BI: p2649 = 0 signal).

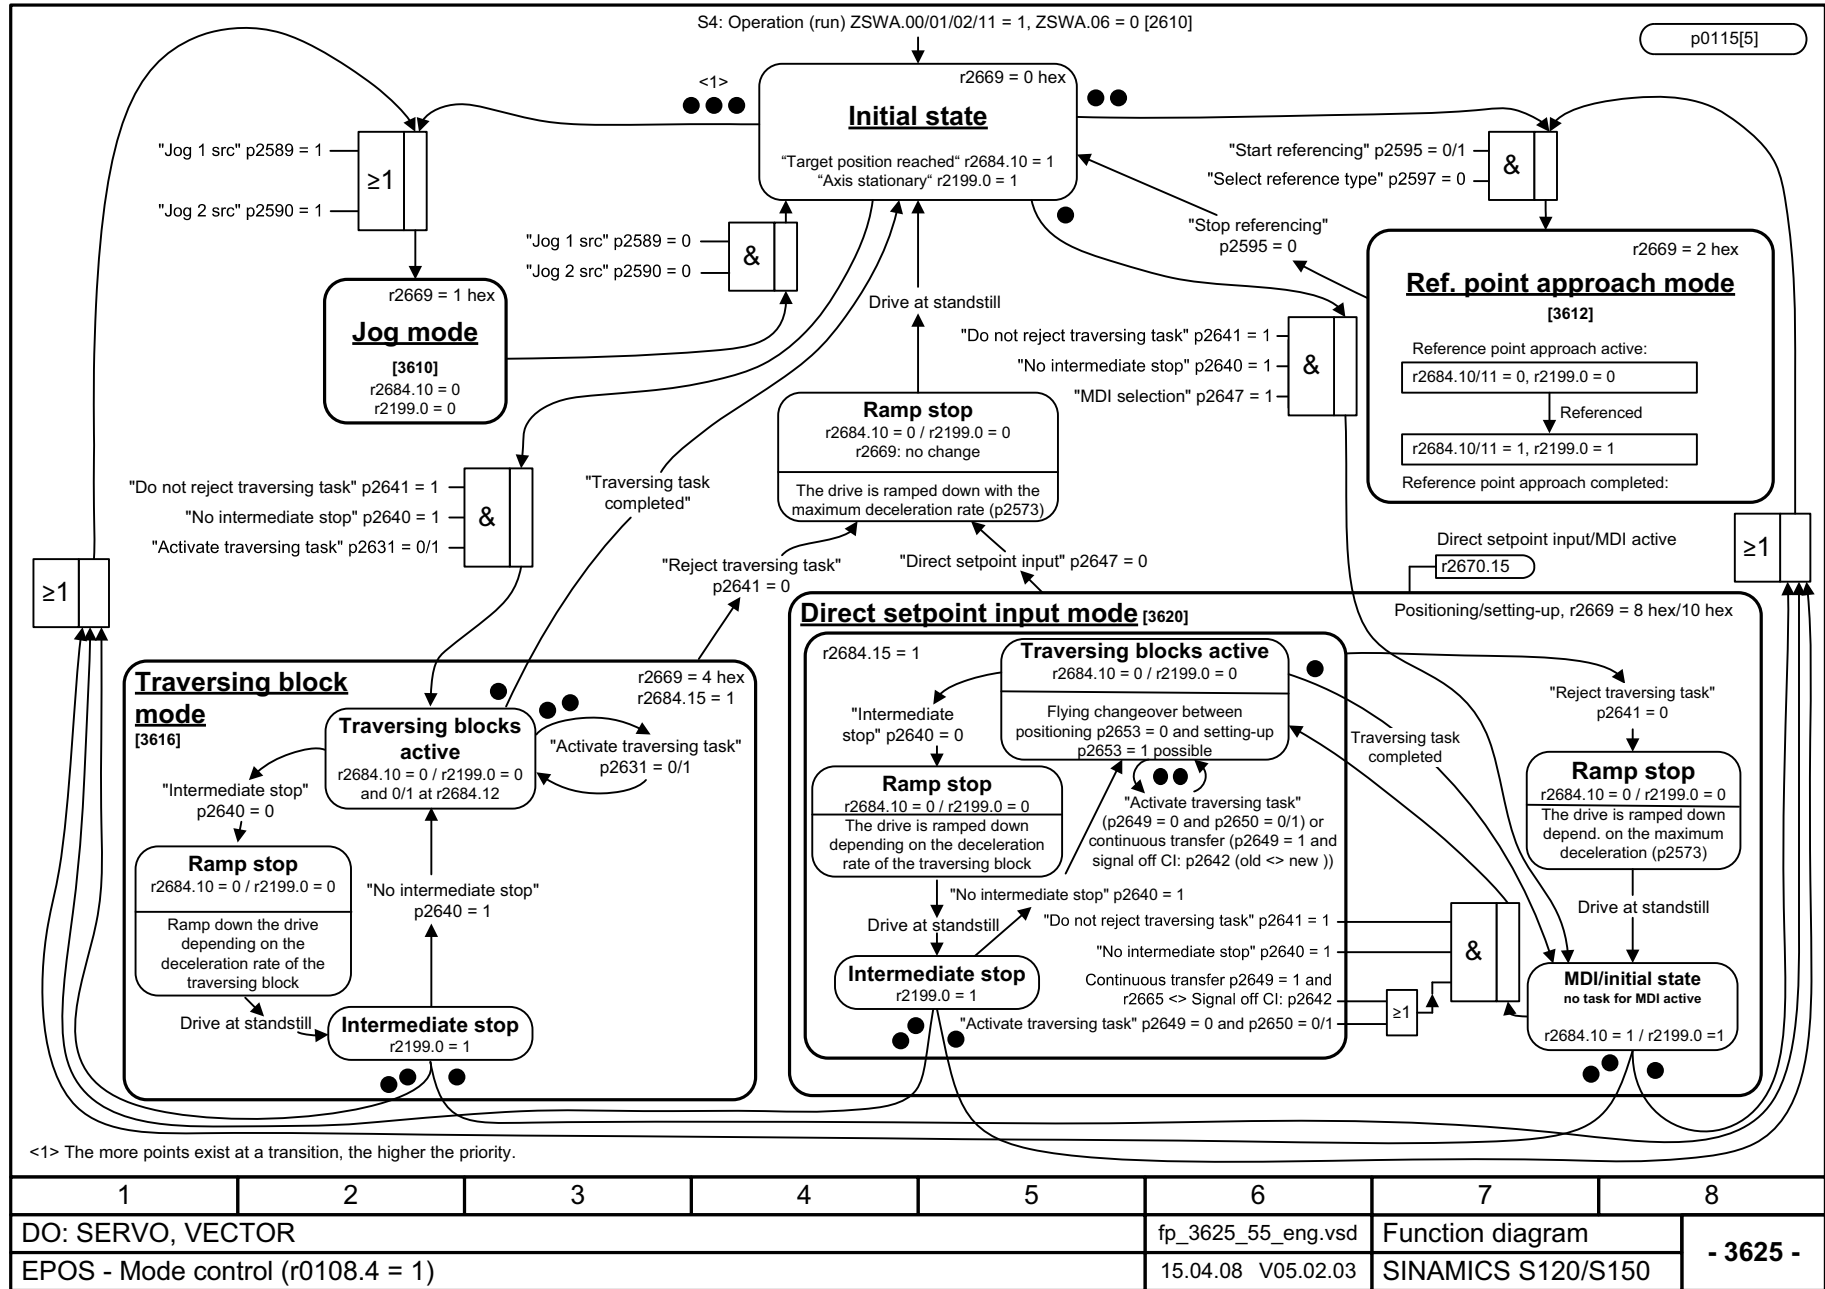

<3> The connector outputs are only supplied with values from here if the "direct setpoint input MDI" mode is active.

<4> For the transfer type "continuous transfer" (BI: p2649 = 1 signal), relative positioning is not permissible.

<1> When the "reference point approach" mode is active, the velocity override influences the approach velocity reference cams (p2605). However, the approach velocity reference zero mark (p2608) and the approach velocity reference point (p2611) are not influenced.  
 <2> The STOP cams are low active.  
 When a cam responds, the drive brakes with maximum deceleration along the ramp. After the fault has been acknowledged, only movements away from the STOP cam are permitted.

- <1> When the "basic positioner" function module (r0108.4 = 1) is active, these binector/connector inputs are supplied by default with values from this module. The second value specifies this assignment.
- <2> For p2534 > 0 % the following applies: A deadline of two position controller clock cycles is additionally effective.
- <3> For p2534 = 0 % the following applies: Pre-control balancing is not effective.
- <4> Not applicable if the "linear motor" function module is active (r0108.12 = 1).
- <5> Only if the "extended brake control" function module is active (r0108.14 = 1).

Fig. 3-208 5020 – Speed setpoint filter and speed precontrol

- <1> Only for encoder:  
p1400.10 = 1 is recommended if a torque pre-control signal is also connected at [5060] in addition to the speed pre-control signal.
- <2> The interpolator is only effective for clock-cycle synchronous PROFIdrive operation and sign-of-life received from the master (STW2.12 ... STW2.15). If the Dynamic Servo Control (DSC) is active, an additional deadtime of one speed controller sampling time is effective.
- <3> For a 1/0 edge from control command STW2.8 "travel to fixed stop" [2444] the output of all filters is set to the input value for an instantaneous response to a change of the speed setpoint sign.
- <4> The value is displayed correctly only with r0899.2 = 1 (Operation enabled).

[2420]

- <1> This function is only active when the "Controller parameter adaptation" ( $r0171.29 = 1$ ) function module is active.
- <2> To activate block:  
Bit 0 = 1 → Block activated for DDS 0 ... Bit 31 = 1 → Block activated for DDS 31.
- <3> Sampling time = 1 ms
- <4> Sampling time = 40 ms
- <5> In addition the function module "Advanced Positioning Control (APC)" ( $r0108.7 = 1$ ) or "Active Vibration Suppression (AVS/APC-ECO)" ( $r0108.19 = 1$ ) must be activated.
- <6> In addition the function module "Advanced Positioning Control (APC)" ( $r0108.7 = 1$ ) must be activated.
- <7> When configuring telegrams 146, 148, 149 ( $p0922 = 146, 148, 149$ ),  $p2788[n]$  are automatically interconnected to  $r2050[n + 14]$  ( $0 ≤ n ≤ 3$ ).
- <8> The following applies to the signal value: 1000 corresponds to 100 %.  
For  $p2788[0...3]$ : These indices can be used to interconnect Signal ADAPT1 ... ADAPT4.  
For  $p2788[4, 5]$ : These indices can be freely interconnected.
- <9> To adapt filter parameters, the filters must be activated (e.g.  $p1656.0 = 1$ ) and data transfer set to immediate ( $p1699 = 0$ ).

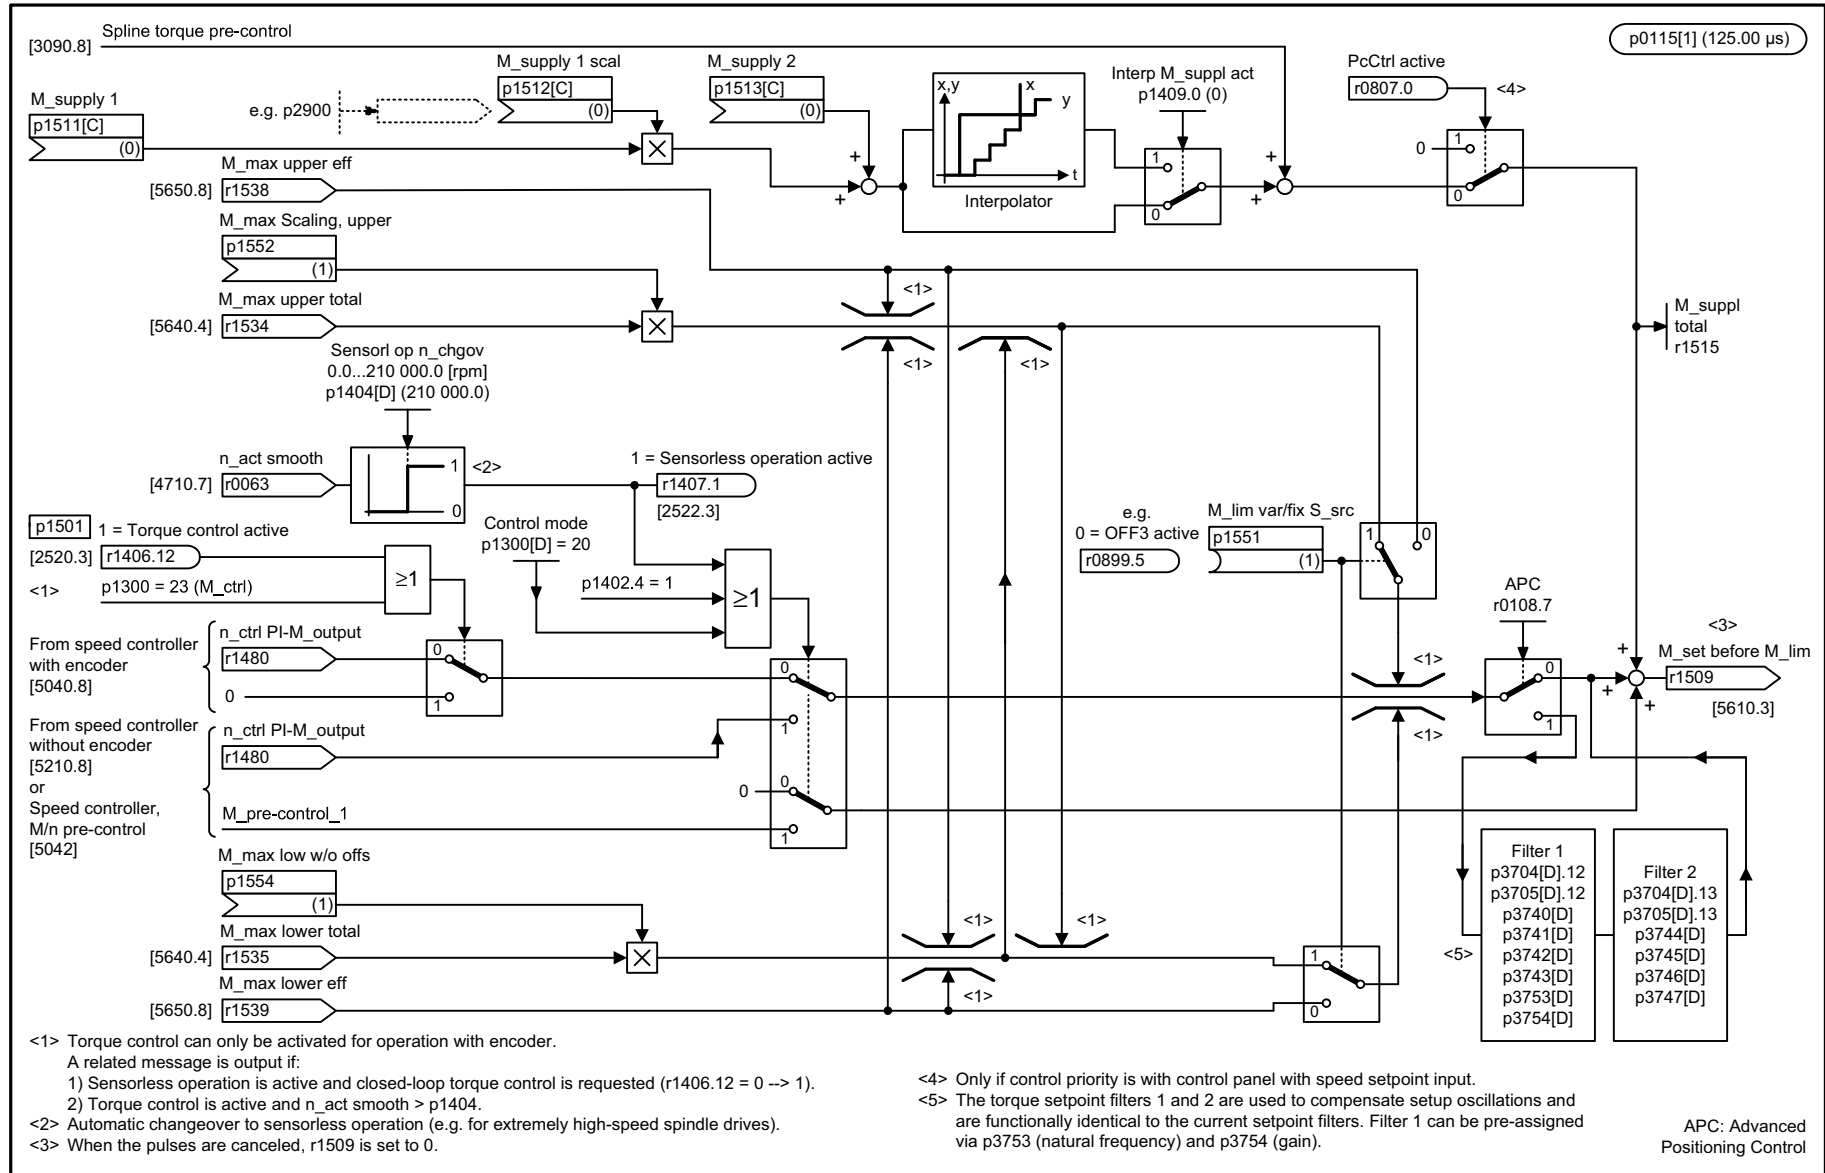

APC: Advanced Positioning Control  
AVS: Active Vibration Suppression  
DDS: Drive Data Set

- <1> Torque control can only be activated for operation with encoder.  
A related message is output if:
  - 1) Sensorless operation is active and closed-loop torque control is requested (r1406.12 = 0 --> 1).
  - 2) Torque control is active and n\_act smooth > p1404.
- <2> Automatic changeover to sensorless operation (e.g. for extremely high-speed spindle drives).
- <3> When the pulses are canceled, r1509 is set to 0.
- <4> Only if control priority is with control panel with speed setpoint input.
- <5> The torque setpoint filters 1 and 2 are used to compensate setup oscillations and are functionally identical to the current setpoint filters. Filter 1 can be pre-assigned via p3753 (natural frequency) and p3754 (gain).

- <1> For p1400.4 = 1, the first torque limit applies for motoring operation and the other for regenerative operation, independently of the sign of the torque and the speed (compatible with SIMODRIVE).  
"Normal case": If neither dynamic limits nor offsets are required, the torque limit when motoring is entered via p1520. The torque limit when regenerating is entered via p1521 (as a negative value).
- <2> For manufacturer-specific PROFIdrive telegrams with PZD 5 = MOMRED (e.g. telegrams 102 ... 106), r1543 is interconnected here [5610.4].
- <3> With p1400.13 = 0, the following applies: if n\_act < p1546, the motor limit is effective.  
With p1400.13 = 1, the following applies: if n\_set = 0, the regenerative limit is effective.
- <4> The following applies to p0543 ≠ 0: The minimum value from p1520 and p0543 is used for further calculation.
- <5> The following applies to p0543 ≠ 0: The minimum value from p1521 and negated p0543 is used for further calculation.

Fig. 3-234 6030 – Speed setpoint, droop

<1>    = Only for vector control without encoder.

<2> p1488 = 1 not recommended with active acceleration calculation [6031].

<3> Scaling: p1489 = 0.100 - for a rated motor torque of r0333 - results in a speed setpoint reduction of 0.1 x p0311.

<4> The value is displayed correctly only with r0899.2 = 1 (Operation enabled).

<5> Only for p1488 > 0.

<6> Interpolation between p0115[4] and p0115[1].

Fig. 3-317 8075 – Faults/alarms configuration

<1> The fault response, acknowledge mode and message type for all faults and alarms are set to meaningful default values in the factory setting. Changes that may be required are only possible in specific value ranges specified by SIEMENS. When the message type is changed, the supplementary information is transferred from fault value r0949 to alarm value r2124 and vice versa.

|   |   |   |   |   |                    |                  |                 |

| Diagnostics - Faults/alarms configuration |   |   |   |   | 22.01.14 V05.02.03 | SINAMICS         |                 |
|   |   |   |   |   |                    |                  | <b>- 8075 -</b> |

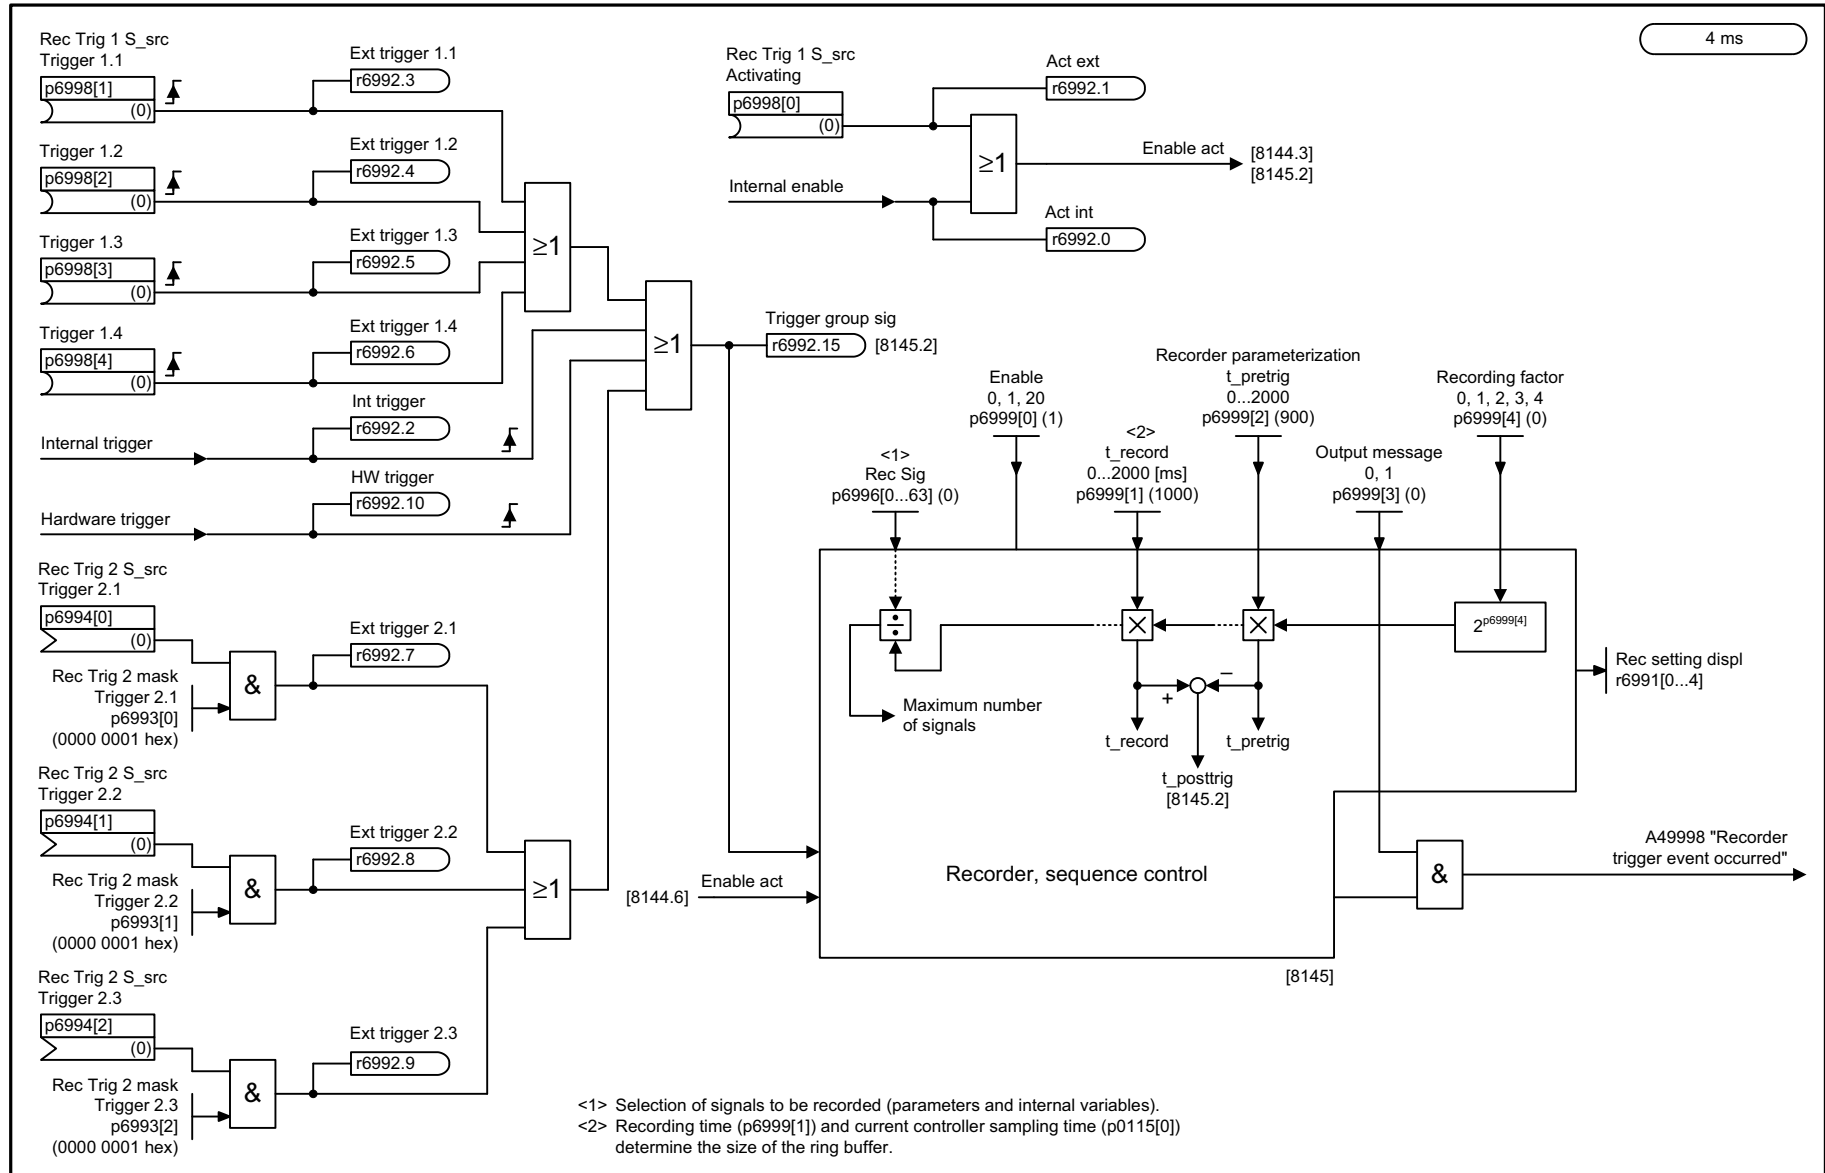

- <1> Only for measuring equipment with  $R_i \geq 1 \text{ M}\Omega$ .
- <2> With the factory setting, input values from -100...100 % result in output voltages from 0...4.98 V.
- <3> The input signals are determined by the reference quantities p200x (100 % corresponds to p200x). The calculated normalization is indicated via r0786.
- <4> Example: If a speed signal is entered via p0071 and r0786 indicates 100.0, a speed change of 100 rpm results in an output voltage change of 1.0 V.

- <1> This controller increases (boosts) the DC link voltage when the modulation depth limit has been reached (p3480).
- <2> When the pulses are enabled, the DC link voltage is ramped (p3566) from the actual value to the setpoint p3510.
- <3> Applies only if the "Master/slave" function module is activated (r0108.19 = 1).
- <4> Applies only if the "Additional Control" function module is activated (r0108.3 = 1).

<1> Filter compensation is used to cover the reactive current demand of a line filter that arises on the basis of its capacitance depending on the operating point. The reactive current required is thus not drawn from the supply system.  
 <2> With p3603 = 0, the D-component is switched off.  
 <3> Only with "Additional Control" function module activated (r0108.3 = 1).

<1> When interconnected further, the output signals are referred to the reference quantities p2000 ... r2004 (100 % ≙ p200x).

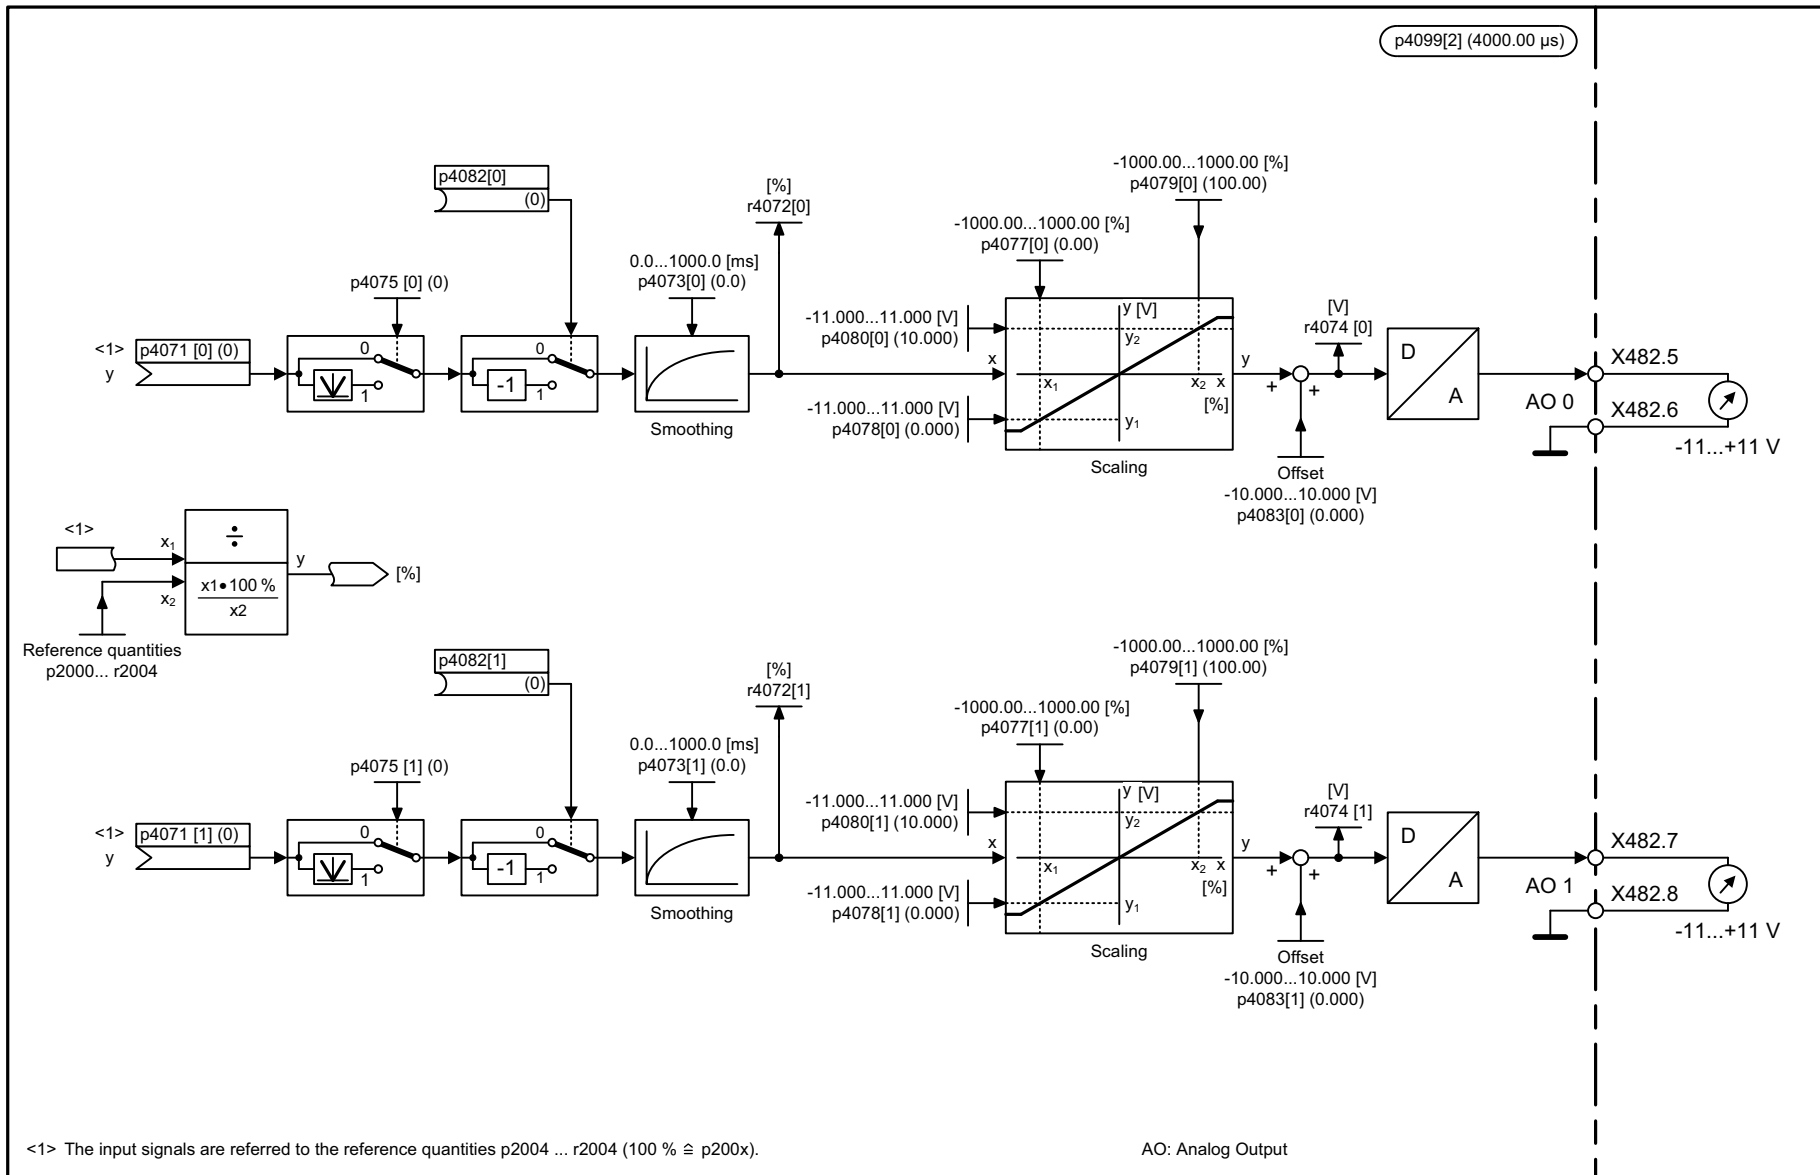

<2> Differential inputs! For input signals referred to ground, terminal 2 and/or terminal 4 must be connected to the reference potential M.

<3> Caution: The voltage between an input and the grounding point must not exceed 35 V. The voltage between the inputs must not exceed 35 V.

<1> Differential input!  
In case of a ground-based input signal, the terminal X521.2 must be connected to the reference potential.  
Caution:  
The voltage between an input (X521.1 or X521.2) and the ground point must not exceed 35 V.  
When the load resistor is switched in (S5.0 closed), the voltage between the input terminals must not exceed 15 V.

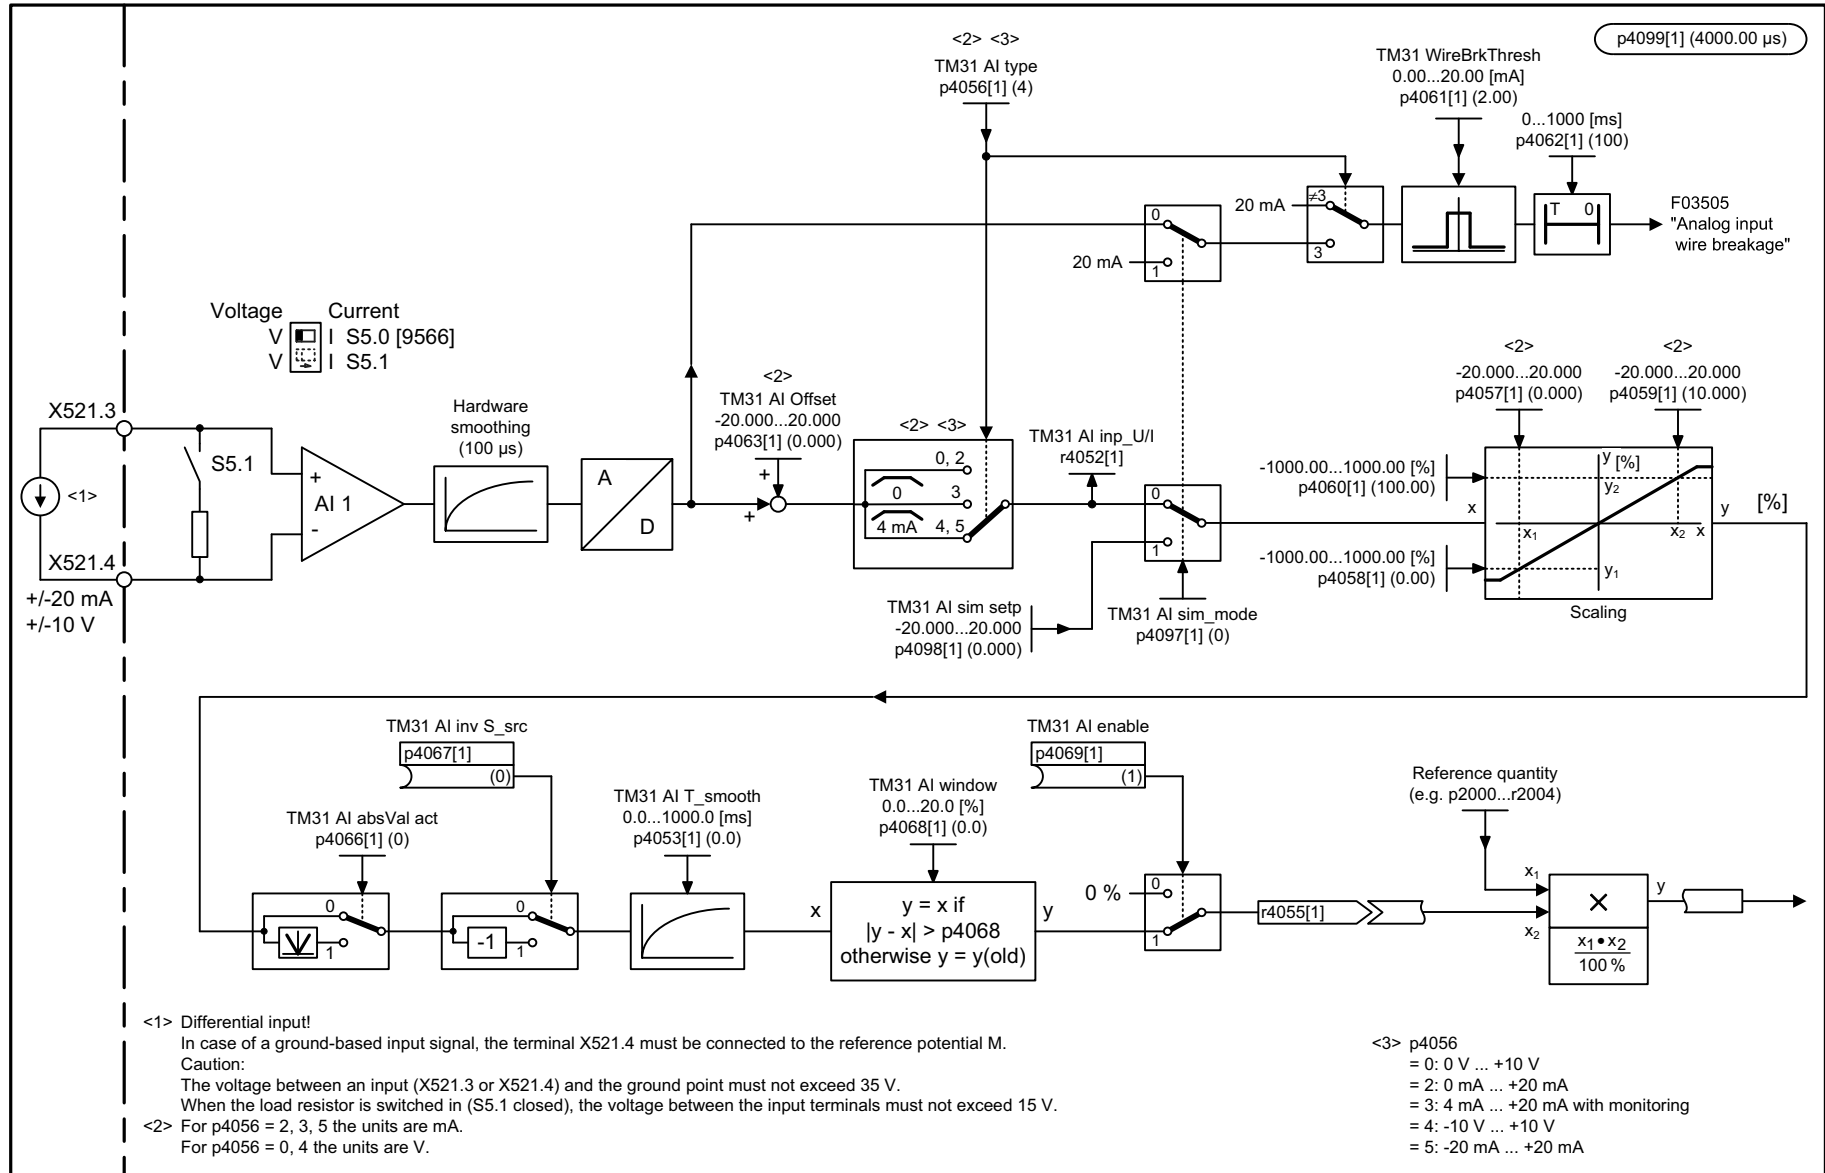

<2> For p4056 = 2, 3, 5 the units are mA.  
For p4056 = 0, 4 the units are V.

|-----|-------------------------------|------|
| 4.1 | Overview of faults and alarms | 2542 |
| 4.2 | List of faults and alarms     | 2555 |

## 4.1 Overview of faults and alarms

### 4.1.1 General information

#### Display of faults/alarms (messages)

In the case of a fault, the drive signals the corresponding fault(s) and/or alarm(s).

For example, the following methods for displaying faults and alarms are available:

- Display via the fault and alarm buffer with PROFIBUS/PROFINET.
- Online via the commissioning software
- Display and operating unit (e.g. BOP, AOP)

#### Differences between faults and alarms

The differences between faults and alarms are as follows:

Table 4-1 Differences between faults and alarms

| Type   | Description   |
|--------|---|
| Faults | <p>What happens when a fault occurs?</p> <ul style="list-style-type: none"> <li>• The appropriate fault reaction is initiated</li> <li>• Status signal ZSW1.3 is set.</li> <li>• The fault is entered into the fault buffer.</li> </ul> <p>How are faults eliminated?</p> <ul style="list-style-type: none"> <li>• Remove the original cause of the fault.</li> <li>• Acknowledge the fault.</li> </ul> |
| Alarms | <p>What happens when an alarm occurs?</p> <ul style="list-style-type: none"> <li>• Status signal ZSW1.7 is set.</li> <li>• The alarm is entered into the alarm buffer.</li> </ul> <p>How are alarms eliminated?</p> <ul style="list-style-type: none"> <li>• Alarms acknowledge themselves.</li> </ul> <p>If the cause of the alarm is no longer present, they automatically reset themselves.</p>      |

## Fault reactions

### Note

The following table lists all fault reactions and their meanings used for the entire SINAMICS drive family.

The following fault reactions are defined:

Table 4-2 Fault reactions

| List             | PROFdrive     | Reaction  | Description  |
|------------------|---------------|---|--|
| NONE             | -             | None  | <p>No reaction when a fault occurs.</p> <p><b>Note</b></p> <p>When the "Basic positioner" function module is activated (r0108.4 = 1), the following applies:</p> <p>When a fault occurs with fault reaction "NONE", an active traversing task is interrupted and the system switches to tracking mode until the fault has been rectified and acknowledged.</p>   |
| OFF1             | ON/<br>OFF    | Brake along the ramp-function generator down ramp followed by pulse inhibit | <p><b>Closed-loop speed control (p1300 = 20, 21)</b></p> <ul style="list-style-type: none"> <li>• n_set = 0 is input immediately to brake the drive along the ramp-function generator ramp down (p1121).</li> <li>• When zero speed is detected, the motor holding brake (if parameterized) is closed (p1215). The pulses are suppressed when the brake application time (p1217) expires.</li> </ul> <p>Zero speed is detected if the actual speed drops below the threshold (p1226) or if the monitoring time (p1227) started when the speed setpoint &lt;= speed threshold (p1226) has expired.</p> <p><b>Torque control (p1300 = 23)</b></p> <ul style="list-style-type: none"> <li>• The following applies for torque control:<br/>Reaction as for OFF2.</li> <li>• When the system switches to torque control with p1501, the following applies:<br/>No separate braking reaction.</li> </ul> <p>If the actual speed value drops below the speed threshold (p1226) or the timer stage (p1227) has expired, the motor holding brake (if one is being used) is closed. The pulses are suppressed when the brake application time (p1217) expires.</p> |
| OFF1_<br>DELAYED | -             | As for OFF1, however delayed  | <p>Faults with this fault response only become effective after the delay time in p3136 has expired.</p> <p>The remaining time up to OFF1 is displayed in r3137.</p>  |
| OFF2             | COAST<br>STOP | Internal/external pulse inhibit   | <p><b>Closed-loop speed and torque control</b></p> <ul style="list-style-type: none"> <li>• Instantaneous pulse suppression, the drive "coasts" to a standstill.</li> <li>• The motor holding brake (if one is being used) is closed immediately.</li> <li>• Switching on inhibited is activated.</li> </ul>   |

## 4 Faults and alarms

### 4.1 Overview of faults and alarms

Table 4-2 Fault reactions, continued

| List           | PROFIdrive | Reaction   | Description  |
|----------------|------------|--|--|
| OFF3           | QUICK STOP | Braking along the OFF3 down ramp followed by pulse inhibit | <p><b>Closed-loop speed control (p1300 = 20, 21)</b></p> <ul style="list-style-type: none"> <li>n_set = 0 is input immediately to brake the drive along the OFF3 ramp down (p1135).</li> <li>When zero speed is detected, the motor holding brake (if parameterized) is closed. The pulses are suppressed when the closing time of the holding brake (p1217) expires. Zero speed is detected if the actual speed drops below the threshold (p1226) or if the monitoring time (p1227) started when the speed setpoint &lt;= speed threshold (p1226) has expired.</li> <li>Switching on inhibited is activated.</li> </ul> <p><b>Torque control (p1300 = 23)</b></p> <ul style="list-style-type: none"> <li>Changeover to speed-controlled operation and other reactions as described for speed-controlled operation.</li> </ul> |
| STOP2          | -          | n_set = 0  | <ul style="list-style-type: none"> <li>n_set = 0 is input immediately to brake the drive along the OFF3 ramp down (p1135).</li> <li>The drive remains in closed-loop speed control.</li> </ul>   |
| IASC/<br>DCBRK | -          | -  | <ul style="list-style-type: none"> <li>For synchronous motors, the following applies:<br/>If a fault occurs with this fault reaction, an internal armature short-circuit is triggered.<br/>The conditions for p1231 = 4 must be observed.</li> <li>For induction motors, the following applies:<br/>If a fault occurs with this fault reaction, DC braking is triggered.<br/>DC braking must have been commissioned (p1232, p1233, p1234).</li> </ul>  |
| ENCODER        | -          | Internal/external pulse inhibit (p0491)                    | <p>The fault reaction ENCODER is applied as a function of the setting in p0491.<br/>Factory setting:<br/>p0491 = 0 --&gt; Encoder fault causes OFF2</p> <p><b>Notice</b></p> <p>When changing p0491, it is imperative that the information in the description of this parameter is carefully observed.</p>   |

## Acknowledging faults

The list of faults and alarms specifies how to acknowledge each fault after the cause has been remedied.

Table 4-3 Acknowledging faults

| Acknowledgment | Description   |       |                          |       |                          |       |                          |       |                            |
|----------------|---|-------|--------------------------|-------|--------------------------|-------|--------------------------|-------|----------------------------|
| POWER ON       | <p>The fault is acknowledged using POWER ON (switch drive unit off and on again).</p> <p><b>Note</b><br/>If this action has not removed the fault cause, the fault is displayed again immediately after power up.</p>   |       |                          |       |                          |       |                          |       |                            |
| IMMEDIATELY    | <p>Faults can be acknowledged on one drive object (Points 1 to 3) or on all drive objects (Point 4) as follows:</p> <p>1 Set acknowledgment by parameter:<br/>p3981 = 0 --&gt; 1</p> <p>2 Acknowledging via binector inputs:</p> <table data-bbox="391 801 821 907"> <tr> <td>p2103</td> <td>BI: 1 Acknowledge faults</td> </tr> <tr> <td>p2104</td> <td>BI: 2 Acknowledge faults</td> </tr> <tr> <td>p2105</td> <td>BI: 3 Acknowledge faults</td> </tr> </table> <p>3 Acknowledging using a PROFIDRIVE control signal:<br/>STW1.7 = 0 --&gt; 1 (edge)</p> <p>4 Acknowledge all faults</p> <table data-bbox="391 1052 821 1086"> <tr> <td>p2102</td> <td>BI: Acknowledge all faults</td> </tr> </table> <p>All of the faults on all of the drive objects of the drive system can be acknowledged using this binector input.</p> <p><b>Note</b></p> <ul data-bbox="367 1209 1420 1366" style="list-style-type: none"> <li>• These faults can also be acknowledged by a POWER ON.</li> <li>• If the cause of the fault has not been removed, the fault will continue to be displayed after acknowledgment.</li> <li>• Safety Integrated faults<br/>The "Safe Torque Off" (STO) function must be deselected before these faults are acknowledged.</li> </ul> | p2103 | BI: 1 Acknowledge faults | p2104 | BI: 2 Acknowledge faults | p2105 | BI: 3 Acknowledge faults | p2102 | BI: Acknowledge all faults |
| p2103          | BI: 1 Acknowledge faults  |       |                          |       |                          |       |                          |       |                            |
| p2104          | BI: 2 Acknowledge faults  |       |                          |       |                          |       |                          |       |                            |
| p2105          | BI: 3 Acknowledge faults  |       |                          |       |                          |       |                          |       |                            |
| p2102          | BI: Acknowledge all faults  |       |                          |       |                          |       |                          |       |                            |
| PULSE INHIBIT  | <p>The fault can only be acknowledged when the pulses are inhibited (r0899.11 = 0).<br/>The same options are available for acknowledging as described under acknowledge IMMEDIATELY.</p>  |       |                          |       |                          |       |                          |       |                            |

### 4.1.2 Explanation of the list of faults and alarms

The data in the following example have been chosen at random. The information listed below is the maximum amount of information that a description can contain. Some of the information is optional.

The "List of faults and alarms" (Page 2555) has the following layout:

----- **Start of example** -----

---

|                         |   |                     |        |
|-------------------------|---|---------------------|--------|
| <b>Axxxxx (F, N)</b>    | <b>Fault location (optional): Name</b>  |                     |        |
| <b>Message value:</b>   | Component number: %1, fault cause: %2   |                     |        |
| <b>Message class:</b>   | Text of the message class (number according to PROFIdrive)  |                     |        |
| <b>Drive object:</b>    | List of objects.  |                     |        |
| <b>Component:</b>       | Control Unit (CU)   | <b>Propagation:</b> | GLOBAL |
| <b>Reaction:</b>        | NONE  |                     |        |
| <b>Acknowledgement:</b> | NONE  |                     |        |
| <b>Cause:</b>           | Description of possible causes.<br>Fault value (r0949, interpret format): or alarm value (r2124, interpret format): (optional)<br>Information about fault or alarm values (optional). |                     |        |
| <b>Remedy:</b>          | Description of possible remedies.   |                     |        |
| <b>Response to F:</b>   | A_INFEED: OFF2 (OFF1, NONE)<br>SERVO: NONE (OFF1, OFF2, OFF3)<br>VECTOR: NONE (OFF1, OFF2, OFF3)  |                     |        |
| <b>Acknowl. upon F:</b> | IMMEDIATELY (POWER ON)  |                     |        |
| <b>Response upon N:</b> | NONE  |                     |        |
| <b>Acknowl. upon N:</b> | NONE  |                     |        |

----- **End of example** -----

|                      |  |
|----------------------|--|
| <b>Axxxxx</b>        | <b>Alarm xxxxx</b>   |
| <b>Axxxxx (F, N)</b> | <b>Alarm xxxxx (message type can be changed to F or N)</b> |
| <b>Fxxxxx</b>        | <b>Fault xxxxx</b>   |
| <b>Fxxxxx (A, N)</b> | <b>Fault xxxxx (report type can be changed to A or N)</b>  |
| <b>Nxxxxx</b>        | <b>No message</b>  |
| <b>Nxxxxx (A)</b>    | <b>No message (message type can be changed to A)</b>       |
| <b>Cxxxxx</b>        | <b>Safety message (separate message buffer)</b>            |

A message comprises a letter followed by the relevant number.

The meaning of the letters is as follows:

- A means "Alarm"
- F means "Fault"
- N means "No message" or "Internal message"
- C means "Safety message"

The optional brackets indicate whether the type specified for this message can be changed and which message types can be adjusted via parameters (p2118, p2119).

Information on reaction and acknowledgment is specified independently for a message with an adjustable message type (e.g. reaction to F, acknowledgment for F).

---

**Note**

You can change the default properties of a fault or alarm by setting parameters.

The "List of faults and alarms" (Page 2555) supplies information referred to the properties of a message set as default. If the properties of a specific message are changed, the corresponding information may have to be modified in this list.

---

**Fault location (optional): Name**

The fault location (optional), the name of the fault or alarm and the message number are all used to identify the message (e.g. with the commissioning software).

**Message value:**

The information provided under the message value informs you about the composition of the fault/alarm value.

**Example:**

Message value: Component number: %1, fault cause: %2

This message value contains information about the component number and cause of the fault. The entries %1 and %2 are placeholders, which are filled appropriately in online operation (e.g. with the commissioning software).

**Message class:**

For each message, specifies the associated message class with the following structure:

Text of the message class (number according to PROFIdrive)

The message classes are transferred at different interfaces to higher-level control systems and their associated display and operating units.

The message classes that are available are shown in Table "Message classes and coding of various diagnostic interfaces (Page 2548)". In addition to the text of the message class and their number according to PROFIdrive – as well as a brief help text regarding the cause and remedy – they also include information about the various diagnostic interfaces:

- PN (hex)
  - Specifies the "Channel error type" of the PROFINET channel diagnostics.
  - When activating the channel diagnostics, using the GSDML file, the texts listed in the table can be displayed.
- DS1 (dec)
  - Specifies the bit number in data set DS1 of the diagnostic alarm for SIMATIC S7.
  - When the diagnostic alarms are activated, the texts listed in the table can be displayed.
- DP (dec)
  - Specifies the "Error type" of the channel-related diagnostics for PROFIBUS.
  - When the channel diagnostics are activated, the texts listed in the standard and the GSD file can be displayed.

## 4 Faults and alarms

### 4.1 Overview of faults and alarms

- ET 200 (dec)

Specifies the "Error type" of the channel-related diagnostics for the SIMATIC ET 200pro FC-2 device.

When the channel diagnostics are activated, the texts listed in the standard and the GSD file of the ET 200pro can be displayed.

- NAMUR (r3113.x)

Specifies the bit number in parameter r3113.

For the interfaces DP, ET 200, NAMUR, in some instances, the message classes are combined.

Table 4-4 Message classes and coding of various diagnostic interfaces

| Text of the message class (number according to PROFIdrive)<br>Cause and remedy.   | Diagnostics interface |              |                                  |                                  |                    |
|---|-----------------------|--------------|----------------------------------|----------------------------------|--------------------|
|   | PN<br>(hex)           | DS1<br>(dec) | DP<br>(dec)                      | ET 200<br>(dec)                  | NAMUR<br>(r3113.x) |
| <b>Hardware/software errors (1)</b><br>A hardware or software malfunction was detected. Carry out a POWER ON for the relevant component. If it occurs again, contact the hotline.   | 9000                  | 0            | 16                               | 9                                | 0                  |
| <b>Line fault (2)</b><br>A line supply fault has occurred (phase failure, voltage level ...). Check the line supply and fuses. Check the supply voltage. Check the wiring.  | 9001                  | 1            | 17                               | 24                               | 1                  |
| <b>Supply voltage fault (3)</b><br>An electronics supply voltage fault (48 V, 24 V, 5 V ...) was detected. Check the wiring. Check the voltage level.   | 9002                  | 2            | 2 <sup>1</sup><br>3 <sup>2</sup> | 2 <sup>1</sup><br>3 <sup>2</sup> | 15                 |
| <b>DC-link overvoltage (4)</b><br>The DC-link voltage has assumed an inadmissibly high value. Check the dimensioning of the system (line supply, reactor, voltages). Check the infeed settings.   | 9003                  | 3            | 18                               | 24                               | 2                  |
| <b>Power electronics fault (5)</b><br>An impermissible operating state of the power electronics was detected (overcurrent, overtemperature, IGBT failure ...). Check compliance with the permissible load cycles. Check the ambient temperatures (fan). | 9004                  | 4            | 19                               | 24                               | 3                  |
| <b>Overtemperature of the electronic component (6)</b><br>The temperature in the component has exceeded the highest permissible limit. Check the ambient temperature / control cabinet ventilation.   | 9005                  | 5            | 20                               | 5                                | 4                  |
| <b>Ground fault / inter-phase short-circuit detected (7)</b><br>A ground fault / inter-phase short-circuit was detected in the power cables or in the motor windings. Check the power cables (connection). Check the motor.                             | 9006                  | 6            | 21                               | 20                               | 5                  |
| <b>Motor overload (8)</b><br>The motor was operated outside the permissible limits (temperature, current, torque ...). Check the load cycles and set limits. Check the ambient temperature / motor cooling.   | 9007                  | 7            | 22                               | 24                               | 6                  |

Table 4-4 Message classes and coding of various diagnostic interfaces, continued

| Text of the message class (number according to PROFIdrive)<br>Cause and remedy.  | Diagnostics interface |              |             |                 |                    |
|--|-----------------------|--------------|-------------|-----------------|--------------------|
|  | PN<br>(hex)           | DS1<br>(dec) | DP<br>(dec) | ET 200<br>(dec) | NAMUR<br>(r3113.x) |
| <b>Communication to the higher-level controller faulted (9)</b><br>The communication to the higher-level controller (internal coupling, PROFIBUS, PROFINET ...) is faulted or interrupted. Check the state of the higher-level controller. Check the communication connection/-wiring. Check the bus configuration/cycles. | 9008                  | 8            | 23          | 19              | 7                  |
| <b>Safety monitoring channel has detected an error (10)</b><br>A safe operation monitoring function has detected an error.   | 9009                  | 9            | 24          | 25              | 8                  |
| <b>Actual position/speed value incorrect or not available (11)</b><br>An illegal signal state was detected while evaluating the encoder signals (track signals, zero marks, absolute values ...). Check the encoder / state of the encoder signals. Observe the maximum permissible frequencies.                           | 900A                  | 10           | 25          | 29              | 9                  |
| <b>Internal (DRIVE-CLiQ) communication faulted (12)</b><br>The internal communication between the SINAMICS components is faulted or interrupted. Check the DRIVE-CLiQ wiring. Ensure an EMC-compliant installation. Observe the maximum permissible quantity structures / cycles.  | 900B                  | 11           | 26          | 31              | 10                 |
| <b>Infeed fault (13)</b><br>The infeed is faulty or has failed. Check the infeed and its environment (line supply, filters, reactors, fuses ...). Check the infeed control.  | 900C                  | 12           | 27          | 24              | 11                 |
| <b>Braking controller / Braking Module faulted (14)</b><br>The internal or external Braking Module is faulted or overloaded (temperature). Check the connection/state of the Braking Module. Comply with the permissible number of braking operations and their duration.  | 900D                  | 13           | 28          | 24              | 15                 |
| <b>Line filter fault (15)</b><br>The line filter monitoring has detected an excessively high temperature or another impermissible state. Check the temperature / temperature monitoring. Check the configuration to ensure that it is permissible (filter type, infeed, thresholds).                                       | 900E                  | 14           | 17          | 24              | 15                 |
| <b>External measured value / signal state outside of the permissible range (16)</b><br>A measured value / signal state read in via the input area (digital/analog/temperature) has assumed an impermissible value/state. Identify and check the relevant signal. Check the set thresholds.                                 | 900F                  | 15           | 29          | 26              | 15                 |
| <b>Application / technological function faulty (17)</b><br>The application / technological function has exceeded a (set) limit (position, velocity, torque ...). Identify and check the relevant limit. Check the setpoint specification of the higher-level controller.   | 9010                  | 16           | 30          | 9               | 15                 |

## 4 Faults and alarms

### 4.1 Overview of faults and alarms

Table 4-4 Message classes and coding of various diagnostic interfaces, continued

| Text of the message class (number according to PROFIdrive)<br>Cause and remedy.  | Diagnostics interface |              |             |                 |                    |
|--|-----------------------|--------------|-------------|-----------------|--------------------|
|  | PN<br>(hex)           | DS1<br>(dec) | DP<br>(dec) | ET 200<br>(dec) | NAMUR<br>(r3113.x) |
| <b>Error in the parameterization/configuration/commissioning procedure (18)</b><br>An error was identified in the parameterization or in a commissioning procedure, or the parameterization does not match the actual device configuration. Determine the precise cause of the fault using the commissioning tool. Adapt the parameterization or device configuration. | 9011                  | 17           | 31          | 16              | 15                 |
| <b>General drive fault (19)</b><br>Group fault. Determine the precise cause of the fault using the commissioning tool.   | 9012                  | 18           | 9           | 9               | 15                 |
| <b>Auxiliary unit fault (20)</b><br>The monitoring of an auxiliary unit (incoming transformer, cooling unit ...) has detected an illegal state. Determine the exact cause of the fault and check the relevant device.  | 9013                  | 19           | 29          | 26              | 15                 |

1. Undervoltage condition of the electronics power supply
2. Overvoltage condition of the electronics power supply

#### Drive object:

Each message (fault/alarm) specifies the drive object in which it can be found.

A message can belong to either one, several, or all drive objects.

#### Component:

Type of hardware component that has triggered the fault or alarm.

With "Component: None" it is not possible to assign the message to a hardware component.

**Propagation:**

In the case of faults that are, for example, triggered by the Control Unit or a Terminal Module, central functions of the drive are also often affected. Using propagation, faults that are triggered by one drive object are therefore passed on to other drive objects.

There are the following types of propagation:

- BICO

The fault is passed on to all active drive objects with closed-loop control functions (infeed, drive) to which there is a BICO interconnection.

- DRIVE

The fault is passed on to all active drive objects with closed-loop control functions.

- GLOBAL

The fault is passed on to all active drive objects.

- LOCAL

The response of this type of propagation is dependent on parameter p3116.

With binector input p3116 = 0 (factory setting) the following applies:

The fault is passed on to the first active drive object with closed-loop control functions.

With binector input p3116 = 1-signal, the following applies:

The fault is not passed on.

**Reaction: Default fault reaction (adjustable fault reaction)**

Specifies the default reaction in the event of a fault.

The optional parentheses indicate whether the default fault reactions can be changed and which fault reactions can be adjusted via parameters (p2100, p2101).

---

**Note**

See Table "Fault reactions" (Page 2543)

---

**Acknowledgment: Default acknowledgment (adjustable acknowledgment)**

Specifies the default method of acknowledging faults after the cause has been eliminated.

The optional parentheses indicate whether the default acknowledgment can be changed and which acknowledgment can be adjusted via parameters (p2126, p2127).

---

**Note**

See Table "Acknowledging faults" (Page 2545)

---

**Cause:**

Describes the possible causes of the fault or alarm. A fault or alarm value can also be specified (optional).

Fault value (r0949, format):

The fault value is entered in the fault buffer in r0949[0..63] and specifies additional, more precise information about a fault.

Alarm value (r2124, format):

The alarm value specifies additional, more precise information about an alarm.

The alarm value is entered in the alarm buffer in r2124[0..7] and specifies additional, more precise information about an alarm.

**Remedy:**

Describes the methods available for eliminating the cause of the active fault or alarm.

**WARNING**

On a case for case basis, service and maintenance personnel are responsible for choosing a suitable method for eliminating the cause of faults.

### 4.1.3 Number ranges of faults and alarms

#### Note

The following number ranges represent an overview of all faults and alarms used in the SINAMICS drive family.

The faults and alarms for the product described in this List Manual are described in detail in "List of faults and alarms" (Page 2555).

Faults and alarms are organized into the following number ranges:

Table 4-5 Number ranges of faults and alarms

| of    | To    | Area  |
|-------|-------|---|
| 1000  | 3999  | Control Unit  |
| 4000  | 4999  | Reserved  |
| 5000  | 5999  | Power section   |
| 6000  | 6899  | Infeed  |
| 6900  | 6999  | Braking Module  |
| 7000  | 7999  | Drive   |
| 8000  | 8999  | Option Board  |
| 9000  | 12999 | Reserved  |
| 13000 | 13033 | Licensing   |
| 13034 | 13099 | Reserved  |
| 13100 | 13102 | Know-how protection   |
| 13103 | 19999 | Reserved  |
| 20000 | 29999 | OEM   |
| 30000 | 30999 | DRIVE-CLiQ component power unit   |
| 31000 | 31999 | DRIVE-CLiQ component encoder 1  |
| 32000 | 32999 | DRIVE-CLiQ component encoder 2<br><b>Note</b><br>Faults that occur are automatically output as an alarm if the encoder is parameterized as a direct measuring system and does not intervene in the motor control. |
| 33000 | 33999 | DRIVE-CLiQ component encoder 3<br><b>Note</b><br>Faults that occur are automatically output as an alarm if the encoder is parameterized as a direct measuring system and does not intervene in the motor control. |
| 34000 | 34999 | Voltage Sensing Module (VSM)  |
| 35000 | 35199 | Terminal Module 54F (TM54F)   |
| 35200 | 35999 | Terminal Module 31 (TM31)   |
| 36000 | 36999 | DRIVE-CLiQ Hub Module   |
| 37000 | 37999 | HF Damping Module   |

## 4 Faults and alarms

|                       |  |                     |       |
|-----------------------|--|---------------------|-------|
| <b>F01005</b>         | <b>Firmware download for DRIVE-CLiQ component unsuccessful</b> |                     |       |
| <b>Message value:</b> | Component number: %1, fault cause: %2                          |                     |       |
| <b>Message class:</b> | Hardware/software error (1)                                    |                     |       |
| <b>Drive object:</b>  | All objects  |                     |       |
| <b>Component:</b>     | None   | <b>Propagation:</b> | LOCAL |
| <b>Reaction:</b>      | NONE   |                     |       |
| <b>Acknowledge:</b>   | IMMEDIATELY  |                     |       |

**Cause:** It was not possible to download the firmware to a DRIVE-CLiQ component.  
 Fault value (r0949, interpret hexadecimal):  
 yyxxxx hex: yy = component number, xxxx = fault cause  
 xxxx = 000B hex = 11 dec:  
 DRIVE-CLiQ component has detected a checksum error.  
 xxxx = 000F hex = 15 dec:  
 The selected DRIVE-CLiQ component did not accept the contents of the firmware file.  
 xxxx = 0012 hex = 18 dec:  
 Firmware version is too old and is not accepted by the component.  
 xxxx = 0013 hex = 19 dec:  
 Firmware version is not suitable for the hardware release of the component.  
 xxxx = 0065 hex = 101 dec:  
 After several communication attempts, no response from the DRIVE-CLiQ component.  
 xxxx = 008B hex = 139 dec:  
 Initially, a new boot loader is loaded (must be repeated after POWER ON).  
 xxxx = 008C hex = 140 dec:  
 Firmware file for the DRIVE-CLiQ component not available on the memory card.  
 xxxx = 008D hex = 141 dec:  
 An inconsistent length of the firmware file was signaled. The firmware download may have been caused by a loss of connection to the firmware file. This can occur during a project download/reset in the case of a SINAMICS Integrated Control Unit, for example.  
 xxxx = 008F hex = 143 dec:  
 Component has not changed to the mode for firmware download. It was not possible to delete the existing firmware.  
 xxxx = 0090 hex = 144 dec:  
 When checking the firmware that was downloaded (checksum), the component detected a fault. It is possible that the file on the memory card is defective.  
 xxxx = 0091 hex = 145 dec:  
 Checking the loaded firmware (checksum) was not completed by the component in the appropriate time.  
 xxxx = 009C hex = 156 dec:  
 Component with the specified component number is not available (p7828).  
 xxxx = Additional values:  
 Only for internal Siemens troubleshooting.

**Remedy:**

- check the selected component number (p7828).
- check the DRIVE-CLiQ wiring.
- save suitable firmware file for download in the directory "/siemens/sinamics/code/sac/".
- use a component with a suitable hardware version
- after POWER ON has been carried out again for the DRIVE-CLiQ component, download firmware again. Depending on p7826, the firmware will be automatically downloaded.

|-----------------------|--|---------------------|--------|
| <b>F01011 (N)</b>     | <b>Download interrupted</b>  |                     |        |
| <b>Message value:</b> | %1   |                     |        |
| <b>Message class:</b> | Error in the parameterization / configuration / commissioning procedure (18) |                     |        |
| <b>Drive object:</b>  | All objects  |                     |        |
| <b>Component:</b>     | None   | <b>Propagation:</b> | GLOBAL |
| <b>Reaction:</b>      | NONE   |                     |        |
| <b>Acknowledge:</b>   | IMMEDIATELY  |                     |        |

**Cause:** The project download was interrupted.  
 Fault value (r0949, interpret decimal):  
 1: The user prematurely interrupted the project download.  
 2: The communication cable was interrupted (e.g. cable breakage, cable withdrawn).  
 3: The project download was prematurely exited by the commissioning tool.  
 100: Different versions between the firmware version and project files which were loaded by loading into the file system "Download from memory card".  
**Note:**  
 The response to an interrupted download is the state "first commissioning".

**Remedy:**

- check the communication cable.
- download the project again.
- boot from previously saved files (switch-off/switch-on or p0976).
- when loading into the file system (download from memory card), use the matching version.

Reaction upon N: NONE  
 Acknowl. upon N: NONE

**F01012 (N) Project conversion error**

**Message value:** %1  
**Message class:** Hardware/software error (1)  
**Drive object:** SERVO, SERVO\_AC, SERVO\_I\_AC, VECTOR, VECTOR\_AC, VECTOR\_I\_AC  
**Component:** None **Propagation:** GLOBAL  
**Reaction:** OFF2 (NONE)  
**Acknowledge:** IMMEDIATELY  
**Cause:** When converting the project of an older firmware version, an error occurred.  
 Fault value (r0949, interpret decimal):  
 Parameter number of the parameter causing the error.  
 For fault value = 600, the following applies:  
 The temperature evaluation is no longer assigned to the power unit but to the encoder evaluation.  
**Notice:**  
 Monitoring of the motor temperature is no longer ensured.

**Remedy:** Check the parameter indicated in the fault value and correctly adjust it accordingly.  
 For fault value = 600:  
 Parameter p0600 must be set to the values 1, 2 or 3 in accordance with the assignment of the internal encoder evaluation to the encoder interface.  
 Value 1 means: The internal encoder evaluation is assigned to the encoder interface 1 via p0187.  
 Value 2 means: The internal encoder evaluation is assigned to the encoder interface 2 via p0188.  
 Value 3 means: The internal encoder evaluation is assigned to the encoder interface 3 via p0189.  
 - if necessary, the internal encoder evaluation must be assigned to an encoder interface via parameters p0187, p0188 or p0189 accordingly.  
 - if necessary, upgrade the firmware to a later version.

## 4 Faults and alarms

### 4.2 List of faults and alarms

**Remedy:**

- carry out a POWER ON (switch-off/switch-on) for all components.
- upgrade firmware to later version.
- contact Technical Support.

---

**F01030 Sign-of-life failure for master control**

**Message value:** -

**Message class:** Communication error to the higher-level control system (9)

**Drive object:** A\_INF, B\_INF, HLA, R\_INF, S\_INF, SERVO, SERVO\_AC, SERVO\_I\_AC, VECTOR, VECTOR\_AC, VECTOR\_I\_AC

**Component:** None **Propagation:** GLOBAL

**Reaction:** Infeed: OFF1 (NONE, OFF2)  
Servo: OFF3 (IASC/DCBRK, NONE, OFF1, OFF2, STOP2)  
Vector: OFF3 (IASC/DCBRK, NONE, OFF1, OFF2, STOP2)  
Hla: OFF3 (NONE, OFF1, OFF2, STOP2)

**Acknowledge:** IMMEDIATELY

**Cause:** For active PC master control, no sign-of-life was received within the monitoring time.  
The master control was returned to the active BICO interconnection.

**Remedy:** Set the monitoring time higher at the PC or, if required, completely disable the monitoring function.  
The monitoring time is set as follows using the commissioning tool:  
<Drive> -> Commissioning -> Control panel -> Button "Fetch master control" -> A window is displayed to set the monitoring time in milliseconds.  
Notice:  
The monitoring time should be set as short as possible. A long monitoring time means a late response when the communication fails!

---

**F01031 Sign-of-life failure for OFF in REMOTE**

**Message value:** -

**Message class:** Communication error to the higher-level control system (9)

**Drive object:** A\_INF, B\_INF, HLA, R\_INF, S\_INF, SERVO, SERVO\_AC, SERVO\_I\_AC, VECTOR, VECTOR\_AC, VECTOR\_I\_AC

**Component:** None **Propagation:** GLOBAL

**Reaction:** Infeed: OFF1 (NONE, OFF2)  
Servo: OFF3 (IASC/DCBRK, NONE, OFF1, OFF2, STOP2)  
Vector: OFF3 (IASC/DCBRK, NONE, OFF1, OFF2, STOP2)  
Hla: OFF3 (NONE, OFF1, OFF2, STOP2)

**Acknowledge:** IMMEDIATELY

**Cause:** With the "OFF in REMOTE" mode active, no sign-of-life was received within 3 seconds.

**Remedy:**

- check the data cable connection at the serial interface for the Control Unit (CU) and operator panel.
- check the data cable between the Control Unit and operator panel.

---

**A01032 (F) ACX: all parameters must be saved**

**Message value:** %1

**Message class:** Hardware/software error (1)

**Drive object:** All objects

**Component:** Control Unit (CU) **Propagation:** LOCAL

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** The parameters of an individual drive object were saved (p0971 = 1), although there is still no backup of all drive system parameters.  
The saved object-specific parameters are not loaded the next time that the system powers up.  
For the system to successfully power up, all of the parameters must have been completely backed up.  
Alarm value (r2124, interpret decimal):  
Only for internal Siemens troubleshooting.  
See also: p0971 (Save drive object parameters)

**Remedy:** Save all parameters (p0977 = 1 or "copy RAM to ROM").  
See also: p0977 (Save all parameters)

Reaction upon F: Infeed: NONE (OFF1, OFF2)  
 Servo: NONE (OFF1, OFF2, OFF3)  
 Vector: NONE (OFF1, OFF2, OFF3)  
 Hla: NONE (OFF1, OFF2, OFF3)

Acknowl. upon F: IMMEDIATELY

**F01033 Units changeover: Reference parameter value invalid**

**Message value:** Parameter: %1  
**Message class:** Error in the parameterization / configuration / commissioning procedure (18)  
**Drive object:** A\_INF, B\_INF, ENC, HLA, R\_INF, S\_INF, SERVO, SERVO\_AC, SERVO\_I\_AC, TM41, VECTOR, VECTOR\_AC, VECTOR\_I\_AC  
**Component:** None **Propagation:** GLOBAL  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** When changing over the units to the referred representation type, it is not permissible for any of the required reference parameters to be equal to 0.0  
 Fault value (r0949, parameter):  
 Reference parameter whose value is 0.0.  
 See also: p0349 (System of units motor equivalent circuit diagram data), p0505 (Selecting the system of units), p0595 (Technological unit selection)  
**Remedy:** Set the value of the reference parameter to a number different than 0.0.  
 See also: p0304, p0305, p0310, p0596, p2000, p2001, p2002, p2003, r2004

---

**F01034 Units changeover: Calculation parameter values after reference value change unsuccessful**

**Message value:** Parameter: %1  
**Message class:** Error in the parameterization / configuration / commissioning procedure (18)  
**Drive object:** A\_INF, B\_INF, ENC, HLA, R\_INF, S\_INF, SERVO, SERVO\_AC, SERVO\_I\_AC, TM41, VECTOR, VECTOR\_AC, VECTOR\_I\_AC  
**Component:** None **Propagation:** GLOBAL  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** The change of a reference parameter meant that for an involved parameter the selected value was not able to be re-calculated in the per unit representation. The change was rejected and the original parameter value restored.  
 Fault value (r0949, parameter):  
 Parameter whose value was not able to be re-calculated.  
 See also: p0304, p0305, p0310, p0596, p2000, p2001, p2002, p2003, r2004  
**Remedy:** - Select the value of the reference parameter such that the parameter involved can be calculated in the per unit representation.  
 - technology unit selection (p0595) before changing the reference parameter p0596, set p0595 = 1.

---

| <b>Acknowledge:</b>   | IMMEDIATELY  |                     |        |
| <b>Cause:</b>         | The memory card and the device type do not match (e.g. a memory card for SINAMICS S is inserted in SINAMICS G).                |                     |        |

**Remedy:**

- insert the matching memory card.
- use the matching Control Unit or power unit.

**F01054**

**CU: System limit exceeded**

**Message value:** %1  
**Message class:** Error in the parameterization / configuration / commissioning procedure (18)  
**Drive object:** All objects  
**Component:** Control Unit (CU) **Propagation:** GLOBAL  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY

**Cause:** At least one system overload has been identified.

Fault value (r0949, interpret decimal):  
 1: Computing time load too high (r9976[1]).  
 5: Peak load too high (r9976[5]).

**Note:**

As long as this fault is present, it is not possible to save the parameters (p0971, p0977).  
 See also: r9976 (System utilization)

**Remedy:**

For fault value = 1, 5:

- reduce the computing time load of the drive unit (r9976[1] and r9976[5]) to under 100 %.
- check the sampling times and adjust if necessary (p0115, p0799, p4099).
- deactivate function modules.
- deactivate drive objects.
- remove drive objects from the target topology.
- note the DRIVE-CLiQ topology rules and if required, change the DRIVE-CLiQ topology.

When using the Drive Control Chart (DCC) or free function blocks (FBLOCKS), the following applies:

- the computing time load of the individual runtime groups on a drive object can be read out in r21005 (DCC) or r20005 (FBLOCKS).
- if necessary, the assignment of the runtime group (p21000, p20000) can be changed in order to increase the sampling time (r21001, r20001).
- if necessary, reduce the number of cyclically calculated blocks (DCC) and/or function blocks (FBLOCKS).

**F01055**

**CU: Internal error (SYNO of port and application not identical)**

**Message value:** %1  
**Message class:** Hardware/software error (1)  
**Drive object:** A\_INF, B\_INF, HLA, R\_INF, S\_INF, SERVO, SERVO\_AC, SERVO\_I\_AC, TM150, TM41, VECTOR, VECTOR\_AC, VECTOR\_I\_AC  
**Component:** Control Unit (CU) **Propagation:** DRIVE  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY

**Cause:**

All applications that operate with slaves at one port must be derived from the same SYNO clock cycle.  
 The first application whose registration (log-on) connects a slave to a port defines the SYNO clock cycle that will be used as basis for the port.  
 Fault value (r0949, interpret hexadecimal):  
 Method ID.

**Note:**

Only for internal Siemens troubleshooting.

**Remedy:**

Contact Technical Support.

**F01056**

**CU: Internal error (clock cycle of parameter group already assigned differently)**

**Message value:** %1  
**Message class:** Hardware/software error (1)  
**Drive object:** A\_INF, B\_INF, HLA, R\_INF, S\_INF, SERVO, SERVO\_AC, SERVO\_I\_AC, TM150, TM41, VECTOR, VECTOR\_AC, VECTOR\_I\_AC  
**Component:** Control Unit (CU) **Propagation:** DRIVE  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY

## 4 Faults and alarms

### 4.2 List of faults and alarms

**Cause:** The requested parameter group (IREG, NREG, ...) is already being used in a different clock cycle.  
Fault value (r0949, interpret hexadecimal):  
Method ID.  
Note:  
Only for internal Siemens troubleshooting.

**Remedy:** Contact Technical Support.

#### **F01057 CU: Internal error (different DRIVE-CLiQ type for the slave)**

**Message value:** %1  
**Message class:** Hardware/software error (1)  
**Drive object:** A\_INF, B\_INF, HLA, R\_INF, S\_INF, SERVO, SERVO\_AC, SERVO\_I\_AC, TM150, TM41, VECTOR, VECTOR\_AC, VECTOR\_I\_AC  
**Component:** Control Unit (CU) **Propagation:** DRIVE  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** The requested DRIVE-CLiQ type (hps\_ps, hps\_enc, ...) has been specified differently for the same slave component.  
Fault value (r0949, interpret hexadecimal):  
Method ID.  
Note:  
Only for internal Siemens troubleshooting.

**Remedy:** Contact Technical Support.

---

#### **F01058 CU: Internal error (slave missing in topology)**

**Message value:** %1  
**Message class:** Hardware/software error (1)  
**Drive object:** A\_INF, B\_INF, HLA, R\_INF, S\_INF, SERVO, SERVO\_AC, SERVO\_I\_AC, TM150, TM41, VECTOR, VECTOR\_AC, VECTOR\_I\_AC  
**Component:** Control Unit (CU) **Propagation:** DRIVE  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** The requested slave component does not exist in the topology.  
Fault value (r0949, interpret hexadecimal):  
Method ID.  
Note:  
Only for internal Siemens troubleshooting.

**Remedy:** Contact Technical Support.

---

#### **F01059 CU: Internal error (port does not exist)**

**Message value:** %1  
**Message class:** Hardware/software error (1)  
**Drive object:** A\_INF, B\_INF, HLA, R\_INF, S\_INF, SERVO, SERVO\_AC, SERVO\_I\_AC, TM150, TM41, VECTOR, VECTOR\_AC, VECTOR\_I\_AC  
**Component:** Control Unit (CU) **Propagation:** DRIVE  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** The port object assigned according to the topology of the requested slave component does not exist.  
Fault value (r0949, interpret hexadecimal):  
Method ID.  
Note:  
Only for internal Siemens troubleshooting.

**Remedy:** Contact Technical Support.

## 4 Faults and alarms

### 4.2 List of faults and alarms

**Remedy:**

- carry out a POWER ON (switch-off/switch-on) for all components.
- upgrade firmware to later version.
- contact Technical Support.

Reaction upon F: Infeed: NONE (OFF1, OFF2)  
Servo: NONE (OFF1, OFF2, OFF3, STOP2)  
Vector: NONE (OFF1, OFF2, OFF3, STOP2)  
Hla: NONE (OFF1, OFF2, OFF3, STOP2)

Acknowl. upon F: IMMEDIATELY (POWER ON)

---

#### **F01068 CU: Data memory memory overflow**

**Message value:** %1

**Message class:** Error in the parameterization / configuration / commissioning procedure (18)

**Drive object:** All objects

**Component:** Control Unit (CU)

**Propagation:** GLOBAL

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY

**Cause:** The utilization for a data memory area is too large.

Fault value (r0949, interpret binary):

Bit 0 = 1: High-speed data memory 1 overloaded

Bit 1 = 1: High-speed data memory 2 overloaded

Bit 2 = 1: High-speed data memory 3 overloaded

Bit 3 = 1: High-speed data memory 4 overloaded

**Remedy:**

- deactivate the function module.
- deactivate drive object.
- remove the drive object from the target topology.

---

#### **A01069 Parameter backup and device incompatible**

**Message value:** -

**Message class:** Error in the parameterization / configuration / commissioning procedure (18)

**Drive object:** All objects

**Component:** Control Unit (CU)

**Propagation:** GLOBAL

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** The parameter backup on the memory card and the drive unit do not match.

The module boots with the factory settings.

Example:

Devices A and B. are not compatible and a memory card with the parameter backup for device A is inserted in device B.

**Remedy:**

- insert a memory card with compatible parameter backup and carry out a POWER ON.
- insert a memory card without parameter backup and carry out a POWER ON.
- save the parameters (p0977 = 1).

---

#### **F01070 Project/firmware is being downloaded to the memory card**

**Message value:** %1

**Message class:** Error in the parameterization / configuration / commissioning procedure (18)

**Drive object:** A\_INF, B\_INF, CU\_LINK, CU\_S\_AC\_DP, CU\_S\_AC\_PN, CU\_S120\_DP, CU\_S120\_PN, CU\_S150\_DP, CU\_S150\_PN, ENC, HLA, HUB, R\_INF, S\_INF, SERVO, SERVO\_AC, SERVO\_I\_AC, TB30, TM120, TM15, TM150, TM15DI\_DO, TM17, TM31, TM41, TM54F\_MA, TM54F\_SL, VECTOR, VECTOR\_AC, VECTOR\_I\_AC

**Component:** Control Unit (CU)

**Propagation:** GLOBAL

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY

|                |  |
|----------------|--|
| <b>Cause:</b>  | An upgrade (project/firmware download) was initiated on the memory card.<br>While this fault is present, the corresponding update takes place with plausibility and consistency checks. After this, depending on the command option, a new boot (reset) for the Control Unit is initiated.<br>Caution:<br>During the upgrade and while this fault is present, it is not permissible to switch off the Control Unit.<br>If the operation is interrupted, this can destroy the file system on the memory card. The memory card will then no longer work properly and must be repaired. |
| <b>Remedy:</b> | Not necessary.<br>The fault is automatically withdrawn after the upgrade has been completed.   |

---

**F01072 Memory card restored from the backup copy**

|                       |   |
|-----------------------|---|
| <b>Message value:</b> | -   |
| <b>Message class:</b> | General drive fault (19)  |
| <b>Drive object:</b>  | All objects   |
| <b>Component:</b>     | Control Unit (CU)   |
| <b>Reaction:</b>      | NONE  |
| <b>Acknowledge:</b>   | IMMEDIATELY   |
| <b>Cause:</b>         | The Control Unit was switched-off while writing to the memory card. This is why the visible partition became defective.<br>After switching on, the data from the non-visible partition (backup copy) were written to the visible partition. |
| <b>Remedy:</b>        | Check that the firmware and parameterization is up-to-date.   |

---

**A01073 (N) POWER ON required for backup copy on memory card**

|                       |  |
|-----------------------|--|
| <b>Message value:</b> | -  |
| <b>Message class:</b> | General drive fault (19)   |
| <b>Drive object:</b>  | All objects  |
| <b>Component:</b>     | Control Unit (CU)  |
| <b>Reaction:</b>      | NONE   |
| <b>Acknowledge:</b>   | NONE   |
| <b>Cause:</b>         | The parameter assignment on the visible partition of the memory card has changed.<br>In order that the backup copy on the memory card is updated on the non-visible partition, it is necessary to carry out a POWER ON or hardware reset (p0972) of the Control Unit.<br>Note:<br>It is possible that a new POWER ON is requested via this alarm (e.g. after saving with p0971 = 1). |
| <b>Remedy:</b>        | - carry out a POWER ON (switch-off/switch-on) for the Control Unit.<br>- carry out a hardware reset (RESET button, p0972).   |
| Reaction upon N:      | NONE   |
| Acknowl. upon N:      | NONE   |

---

**F01082 Parameter error when powering up from data backup**

|                       |  |
|-----------------------|--|
| <b>Message value:</b> | Parameter: %1, index: %2, fault cause: %3  |
| <b>Message class:</b> | Error in the parameterization / configuration / commissioning procedure (18)   |
| <b>Drive object:</b>  | All objects  |
| <b>Component:</b>     | None   |
| <b>Reaction:</b>      | Infeed: OFF2 (NONE, OFF1)<br>Servo: OFF2 (NONE, OFF1, OFF3)<br>Vector: OFF2 (NONE, OFF1, OFF3)<br>Hla: OFF2 (NONE, OFF1, OFF3) |
| <b>Acknowledge:</b>   | IMMEDIATELY  |

- Cause:** Parameterizing errors have been detected (e.g. incorrect parameter value). It is possible that the parameter limits are dependent on other parameters.  
The detailed cause of the fault can be determined using the fault value.  
Fault value (r0949, interpret hexadecimal):  
ccbbaaaa hex  
aaaa = Parameter  
bb = Index  
cc = fault cause
- 0: Parameter number illegal.
  - 1: Parameter value cannot be changed.
  - 2: Lower or upper value limit exceeded.
  - 3: Sub-index incorrect.
  - 4: No array, no sub-index.
  - 5: Data type incorrect.
  - 6: Setting not permitted (only resetting).
  - 7: Descriptive element cannot be changed.
  - 9: Descriptive data not available.
  - 11: No master control.
  - 15: No text array available.
  - 17: Task cannot be executed due to operating state.
  - 20: Illegal value.
  - 21: Response too long.
  - 22: Parameter address illegal.
  - 23: Format illegal.
  - 24: Number of values not consistent.
  - 25: Drive object does not exist.
  - 101: Presently deactivated.
  - 104: Illegal value.
  - 107: Write access not permitted when controller enabled.
  - 108: Unit unknown.
  - 109: Write access only in the commissioning state, encoder (p0010 = 4).
  - 110: Write access only in the commissioning state, motor (p0010 = 3).
  - 111: Write access only in the commissioning state, power unit (p0010 = 2).
  - 112: Write access only in the quick commissioning mode (p0010 = 1).
  - 113: Write access only in the ready mode (p0010 = 0).
  - 114: Write access only in the commissioning state, parameter reset (p0010 = 30).
  - 115: Write access only in the Safety Integrated commissioning state (p0010 = 95).
  - 116: Write access only in the commissioning state, technological application/units (p0010 = 5).
  - 117: Write access only in the commissioning state (p0010 not equal to 0).
  - 118: Write access only in the commissioning state, download (p0010 = 29).
  - 119: Parameter may not be written in download.
  - 120: Write access only in the commissioning state, drive basic configuration (device: p0009 = 3).
  - 121: Write access only in the commissioning state, define drive type (device: p0009 = 2).
  - 122: Write access only in the commissioning state, data set basic configuration (device: p0009 = 4).
  - 123: Write access only in the commissioning state, device configuration (device: p0009 = 1).
  - 124: Write access only in the commissioning state, device download (device: p0009 = 29).
  - 125: Write access only in the commissioning state, device parameter reset (device: p0009 = 30).
  - 126: Write access only in the commissioning state, device ready (device: p0009 = 0).
  - 127: Write access only in the commissioning state, device (device: p0009 not equal to 0).
  - 129: Parameter may not be written in download.
  - 130: Transfer of the master control is inhibited via binector input p0806.
  - 131: Required BICO interconnection not possible because BICO output does not supply floating value
  - 132: Free BICO interconnection inhibited via p0922.
  - 133: Access method not defined.
  - 200: Below the valid values.

- 201: Above the valid values.  
202: Cannot be accessed from the Basic Operator Panel (BOP).  
203: Cannot be read from the Basic Operator Panel (BOP).  
204: Write access not permitted.

**Remedy:**

- correct the parameterization in the commissioning tool and download the project again.
- enter the correct value in the specified parameter.
- identify the parameter that restricts the limits of the specified parameter.

---

**A01097 (N) NTP server cannot be accessed**

**Message value:** -

**Message class:** Communication error to the higher-level control system (9)

**Drive object:** A\_INF, B\_INF, CU\_LINK, CU\_S\_AC\_DP, CU\_S\_AC\_PN, CU\_S120\_DP, CU\_S120\_PN, CU\_S150\_DP, CU\_S150\_PN, ENC, HLA, HUB, R\_INF, S\_INF, SERVO, SERVO\_AC, SERVO\_I\_AC, TB30, TM120, TM15, TM150, TM15DI\_DO, TM17, TM31, TM41, TM54F\_MA, TM54F\_SL, VECTOR, VECTOR\_AC, VECTOR\_I\_AC

**Component:** None **Propagation:** LOCAL

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** The selected NTP server (p3105[0...3]) cannot be accessed. Time synchronization cannot be performed.  
Note:  
NTP: Network Time Protocol  
See also: p3105 (NTP server IP address)

**Remedy:** Correctly set the IP address of the NTP server, and check the connection to the NTP server.  
See also: p3105 (NTP server IP address)

Reaction upon N: NONE  
Acknowl. upon N: NONE

---

**A01099 (N) UTC synchronization tolerance violated**

**Message value:** -

**Message class:** Error in the parameterization / configuration / commissioning procedure (18)

**Drive object:** All objects

**Component:** None **Propagation:** LOCAL

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** The tolerance (p3109) set for UTC synchronization was violated.  
Note:  
UTC: Universal Time Coordinates  
See also: p3109 (UTC synchronization tolerance)

**Remedy:** Select the synchronization intervals shorter so that the deviation between the time of day master and drive system lies within the tolerance.  
Note:  
The deviation when synchronizing is shown in r3107.  
See also: r3107 (UTC synchronization time out of tolerance)

Reaction upon N: NONE  
Acknowl. upon N: NONE

---

**A01100 CU: Memory card withdrawn**

**Message value:** -

**Message class:** General drive fault (19)

**Drive object:** A\_INF, B\_INF, HLA, R\_INF, S\_INF, SERVO, SERVO\_AC, SERVO\_I\_AC, TM41, VECTOR, VECTOR\_AC, VECTOR\_I\_AC

**Component:** Control Unit (CU) **Propagation:** LOCAL

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** The memory card (non-volatile memory) was withdrawn during operation.  
Notice:  
It is not permissible for the memory card to be withdrawn or inserted under voltage.

## 4 Faults and alarms

### 4.2 List of faults and alarms

**Remedy:**

- switch off the drive system.
- re-insert the memory card that was withdrawn - this card must match the drive system.
- switch on the drive system again.

---

**Cause:** The connected power unit cannot be used together with this Control Unit.  
Fault value (r0949, interpret decimal):  
1: Power unit is not supported (e.g. PM240).  
2: DC/AC power unit connected to CU310 not permissible.  
3: Power unit (S120M) not permitted for vector control.

**Remedy:** Replace the power unit that is not permissible by a component that is permissible.

**F01120 (A) Terminal initialization has failed**

**Message value:** %1  
**Message class:** Hardware/software error (1)  
**Drive object:** All objects  
**Component:** None **Propagation:** BICO  
**Reaction:** OFF1 (OFF2)  
**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:** An internal software error occurred while the terminal functions were being initialized.  
Fault value (r0949, interpret hexadecimal):  
Only for internal Siemens troubleshooting.

**Remedy:**  
- carry out a POWER ON (switch-off/switch-on) for all components.  
- upgrade firmware to later version.  
- contact Technical Support.  
- replace the Control Unit.

Reaction upon A: NONE  
Acknowl. upon A: NONE

## 4 Faults and alarms

### 4.2 List of faults and alarms

**Cause:** A time slice has not been defined that fulfills the requirements.  
The port cannot be correctly operated as the alternating cyclic clock cycle cannot be maintained.  
Fault value (r0949, interpret hexadecimal):  
Method ID.  
Note:  
Only for internal Siemens troubleshooting.

**Remedy:** Contact Technical Support.

**A01223**

**CU: Sampling time inconsistent**

**Message value:** %1  
**Message class:** Error in the parameterization / configuration / commissioning procedure (18)  
**Drive object:** All objects  
**Component:** None **Propagation:** LOCAL  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** When changing a sampling time (p0115[0], p0799 or p4099), inconsistency between the clock cycles has been identified.  
Alarm value (r2124, interpret decimal):  
1: Value lower than minimum value.  
2: Value higher than maximum value.  
3: Value not a multiple of 1.25 µs.  
4: Value does not match isochronous PROFIBUS operation.  
5: Value not a multiple of 125 µs.  
6: Value not a multiple of 250 µs.  
7: Value not a multiple of 375 µs.  
8: Value not a multiple of 400 µs.  
10: Special restriction of the drive object violated.  
20: On a SERVO with a sampling time of 62.5 µs, more than two drive objects or one drive object of a type other than SERVO have been detected on the same DRIVE-CLiQ line (a maximum of two SERVO type drive objects are permitted).  
21: Value can be a multiple of the current controller sampling time of a servo or vector drive in the system (e.g. for TB30, the values of all of the indices should be taken into account).  
30: Value less than 31.25 µs.  
31: Value less than 62.5 µs (31.25 µs is not supported for SMC10, SMC30, SMI10 and Double Motor Modules).  
32: Value less than 125 µs.  
33: Value less than 250 µs.  
40: Nodes have been identified on the DRIVE-CLiQ line whose highest common denominator of the sampling times is less than 125 µs. Further, none of the nodes has a sampling time of less than 125 µs.  
41: A chassis unit was identified on the DRIVE-CLiQ line as a node. Further, the highest common denominator of the sampling times of all of the nodes connected to the line is less than 250 µs.  
42: An Active Line Module was identified on the DRIVE-CLiQ line as a node. Further, the highest common denominator of the sampling times of all of the nodes connected to the line is less than 125 µs.  
43: A Voltage Sensing Module (VSM) was identified on the DRIVE-CLiQ line as a node. Further, the highest common denominator of the sampling times of all of the nodes connected to the line is not equal to the current controller sampling time of the drive object of the VSM.  
44: The highest common denominator of the sampling times of all of the components connected to the DRIVE-CLiQ line is not the same for all components of this drive object (e.g. there are components on different DRIVE-CLiQ lines on which different highest common denominators are generated).  
45: A chassis parallel unit was identified on the DRIVE-CLiQ line as a node. Further, the highest common denominator of the sampling times of all of the nodes connected to the line is less than 162.5 µs or 187.5 µs (for a 2x or 3x parallel connection).  
46: A node has been identified on the DRIVE-CLiQ line whose sampling time is not a multiple of the lowest sampling time on this line.  
52: Nodes have been identified on the DRIVE-CLiQ line whose highest common denominator of the sampling times is less than 31.25 µs.  
54: Nodes have been identified on the DRIVE-CLiQ line whose highest common denominator of the sampling times is less than 62.5 µs.

## 4 Faults and alarms

### 4.2 List of faults and alarms

56: Nodes have been identified on the DRIVE-CLiQ line whose highest common denominator of the sampling times is less than 125 µs.

58: Nodes have been identified on the DRIVE-CLiQ line whose highest common denominator of the sampling times is less than 250 µs.

99: Inconsistency of cross drive objects detected.

116: Recommended clock cycle in r0116[0...1].

General note:

The topology rules should be noted when connecting up DRIVE-CLiQ (refer to the appropriate product documentation).

The parameters of the sampling times can also be changed with automatic calculations.

Example for highest common denominator: 125 s, 125 µs, 62.5 µs --> 62.5 µs

**Remedy:**

- check the DRIVE-CLiQ cables.

- set a valid sampling time.

See also: p0115, p0799, p4099

---

#### A01224

#### CU: Pulse frequency inconsistent

**Message value:** %1

**Message class:** Error in the parameterization / configuration / commissioning procedure (18)

**Drive object:** All objects

**Component:** None

**Propagation:** LOCAL

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** When changing the minimum pulse frequency (p0113) inconsistency between the pulse frequencies was identified.

Alarm value (r2124, interpret decimal):

1: Value lower than minimum value.

2: Value higher than maximum value.

3: Resulting sampling time is not a multiple of 1.25 µs.

4: Value does not match isochronous PROFIBUS operation.

10: Special restriction of the drive object violated.

99: Inconsistency of cross drive objects detected.

116: Recommended clock cycle in r0116[0...1].

**Remedy:**

Set a valid pulse frequency.

See also: p0113 (Minimum pulse frequency, selection)

---

#### F01250

#### CU: CU-EEPROM incorrect read-only data

**Message value:** %1

**Message class:** Hardware/software error (1)

**Drive object:** All objects

**Component:** Control Unit (CU)

**Propagation:** LOCAL

**Reaction:** NONE (OFF2)

**Acknowledge:** POWER ON

**Cause:** Error when reading the read-only data of the EEPROM in the Control Unit.

Fault value (r0949, interpret decimal):

Only for internal Siemens troubleshooting.

**Remedy:**

- carry out a POWER ON (switch-off/switch-on).

- replace the Control Unit.

---

#### A01251

#### CU: CU-EEPROM incorrect read-write data

**Message value:** %1

**Message class:** Hardware/software error (1)

**Drive object:** All objects

**Component:** Control Unit (CU)

**Propagation:** GLOBAL

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** Error when reading the read-write data of the EEPROM in the Control Unit.  
Alarm value (r2124, interpret decimal):  
Only for internal Siemens troubleshooting.

**Remedy:** For alarm value r2124 < 256, the following applies:  
- carry out a POWER ON (switch-off/switch-on).  
- replace the Control Unit.  
For alarm value r2124 >= 256, the following applies:  
- for the drive object with this alarm, clear the fault memory (p0952 = 0).  
- as an alternative, clear the fault memory of all drive objects (p2147 = 1).  
- replace the Control Unit.

---

**F01255 CU: Option Board EEPROM read-only data error**

**Message value:** %1  
**Message class:** Hardware/software error (1)  
**Drive object:** All objects  
**Component:** None **Propagation:** LOCAL  
**Reaction:** NONE (OFF2)  
**Acknowledge:** POWER ON

**Cause:** Error when reading the read-only data of the EEPROM in the Option Board.  
Fault value (r0949, interpret decimal):  
Only for internal Siemens troubleshooting.

**Remedy:** - carry out a POWER ON (switch-off/switch-on).  
- replace the Control Unit.

---

**A01256 CU: Option Board EEPROM read-write data error**

**Message value:** %1  
**Message class:** Hardware/software error (1)  
**Drive object:** All objects  
**Component:** None **Propagation:** LOCAL  
**Reaction:** NONE  
**Acknowledge:** NONE

**Cause:** Error when reading the read-write data of the EEPROM in the Option Board.  
Alarm value (r2124, interpret decimal):  
Only for internal Siemens troubleshooting.

**Remedy:** - carry out a POWER ON (switch-off/switch-on).  
- replace the Control Unit.

---

**F01260 Software not released**

**Message value:** -  
**Message class:** Hardware/software error (1)  
**Drive object:** A\_INF, B\_INF, CU\_I, CU\_I\_D410, CU\_LINK, CU\_NX\_CX, ENC, HLA, HUB, R\_INF, S\_INF, SERVO, SERVO\_AC, SERVO\_I\_AC, TB30, TM120, TM15, TM150, TM15DI\_DO, TM17, TM31, TM41, TM54F\_MA, TM54F\_SL, VECTOR, VECTOR\_AC, VECTOR\_I\_AC

|-----------------------|---|---------------------|-------|
| <b>A01302</b>         | <b>Error in the component trace</b>   |                     |       |
| <b>Message value:</b> | %1  |                     |       |
| <b>Message class:</b> | General drive fault (19)  |                     |       |
| <b>Drive object:</b>  | A_INF, B_INF, R_INF, S_INF, SERVO, SERVO_AC, SERVO_I_AC, VECTOR, VECTOR_AC, VECTOR_I_AC |                     |       |
| <b>Component:</b>     | None  | <b>Propagation:</b> | LOCAL |
| <b>Reaction:</b>      | NONE  |                     |       |
| <b>Acknowledge:</b>   | NONE  |                     |       |

**Cause:** An error has occurred in the component trace.  
The message appears in the following cases:  
- upload trace data (p7792 = 1).  
- change factory setting (p7790, p7791) for missing property "component trace" (r0193.1 = 0).  
Alarm value (r2124, interpret decimal):  
1: The DRIVE-CLiQ component does not support the component trace (r0193.1 = 0).  
101: Data from trace 1 cannot be read.  
102: Data from trace 2 cannot be read.  
103: Data from trace 3 cannot be read.  
104: Data from trace 4 cannot be read.  
105: Data from trace 5 cannot be read.

**Remedy:** For alarm value = 1:  
Upgrade the firmware of the DRIVE-CLiQ component involved.

---

**F01303**      **Component does not support the required function**

**Message value:** %1  
**Message class:** Error in the parameterization / configuration / commissioning procedure (18)  
**Drive object:** All objects  
**Component:** None      **Propagation:** BICO  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** A function requested by the Control Unit is not supported by a DRIVE-CLiQ component.  
Fault value (r0949, interpret decimal):  
1: The component does not support the deactivation.  
101: The Motor Module does not support an internal armature short-circuit.  
102: The Motor Module does not support the deactivation.  
201: The Sensor Module does not support actual value inversion (p0410.0 = 1) when using a Hall sensor (p0404.6 = 1) for the commutation.  
202: The Sensor Module does not support parking/unparking.  
203: The Sensor Module does not support the deactivation.  
204: The firmware of this Terminal Module 15 (TM15) does not support the application TM15DI/DO.  
205: The Sensor Module does not support the selected temperature evaluation (r0458, r0459).  
206: The firmware of this Terminal Modules TM41/TM31/TM15 refers to an old firmware version. It is urgently necessary to upgrade the firmware to ensure disturbance-free operation.  
207: The power unit with this hardware version does not support operation with device supply voltages of less than 380 V.  
208: The Sensor Module does not support deselection of commutation with zero mark (via p0430.23).  
211: The Sensor Module does not support single-track encoders (r0459.10).  
212: The Sensor Module does not support LVDT sensors (p4677.0).  
213: The Sensor Module does not support the characteristic type (p4662).  
214: The power unit does not support the temperature evaluation via PT1000 (r0193).  
215: The Terminal Module does not support the temperature evaluation via PT1000  
216: The Voltage Sensing Module (VSM) does not support operation with a PT1000 temperature sensor.

**Remedy:** Upgrade the firmware of the DRIVE-CLiQ component involved.  
For fault value = 205, 214, 215:  
- check parameter p0600 and p0601 and if required, adapt.  
For fault value = 207:  
- replace the power unit or if required set the device supply voltage higher (p0210).  
For fault value = 208:  
- check parameter p0430.23 and reset if necessary.  
For fault value = 216:  
- check the setting of the sensor type (p3665).  
- use a Voltage Sensing module that supports operation with PT1000 (MLFB ...-xxx1).

## 4 Faults and alarms

| <b>Component:</b>     | None   | <b>Propagation:</b> | LOCAL |
| <b>Reaction:</b>      | NONE   |                     |       |
| <b>Acknowledge:</b>   | NONE   |                     |       |

**Cause:** For a component, "deactivate and not present" is set but this component is still in the topology.  
Alarm value (r2124, interpret hexadecimal):  
ddccbbaa hex:  
aa = component number  
bb = component class of the component  
cc = connection number  
Note:  
Component class and connection number are described in F01375.

**Remedy:** - remove the corresponding component.  
- change the setting "deactivate and not present".  
Note:  
Under "Topology --> Topology view", the commissioning tool where relevant offers improved diagnostics capability (e.g. setpoint/actual value comparison).  
See also: p0105, p0125, p0145, p0155, p0165

**A01317 (N) Deactivated component again present**

**Message value:** -  
**Message class:** Error in the parameterization / configuration / commissioning procedure (18)  
**Drive object:** All objects  
**Component:** None **Propagation:** LOCAL  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** If a component of the target topology for an active drive object is inserted and the associated parameter of the component is set to "deactivate" (p0125, p0145, p0155, p0165).  
Note:  
This is the only message that is displayed for a deactivated component.

**Remedy:** The alarm is automatically withdrawn for the following actions:  
- activate the components involved (p0125 = 1, p0145 = 1, p0155 = 1, p0165 = 1).  
- again withdraw the component involved.  
See also: p0125 (Activate/deactivate power unit components), p0145, p0155, p0165 (Activate/deactivate filter module)

Reaction upon N: NONE  
Acknowl. upon N: NONE

**A01318 BICO: Deactivated interconnections present**

**Message value:** %1  
**Message class:** Error in the parameterization / configuration / commissioning procedure (18)  
**Drive object:** All objects  
**Component:** None **Propagation:** LOCAL  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** This alarm is used in the following cases:  
- if an inactive/non-operational drive object is active again/ready for operation  
- if there are items in the list of BI/CI parameters (r9498[0...29], r9499[0...29])  
- if the BICO interconnections saved in the list of BI/CI parameters (r9498[0...29], r9499[0...29]) have actually been changed

**Remedy:** Reset alarm:  
- set p9496 to 1 or 2  
or  
- deactivate the drive object again.

aa = 06 hex = 6 dec:

On one component illegal EEPROM data was detected. These must be corrected before the system continues to boot.

- bb = 01 hex = 1 dec: The Article No. [MLFB] of the power unit that was replaced includes a space retainer. The space retainer (\*) must be replaced by a correct character.

- cccc = preliminary component number of the component with illegal EEPROM data.

aa = 07 hex = 7 dec:

The actual topology contains an illegal combination of components.

- bb = 01 hex = 1 dec: Active Line Module (ALM) and Basic Line Module (BLM).

- bb = 02 hex = 2 dec: Active Line Module (ALM) and Smart Line Module (SLM).

- bb = 03 hex = 3 dec: SIMOTION control (e.g. SIMOTION D445) and SINUMERIK component (e.g. NX15).

- bb = 04 hex = 4 dec: SINUMERIK control (e.g. SINUMERIK 730.net) and SIMOTION component (e.g. CX32).

- cccc: Not used.

aa = 08 hex = 8 dec:

The motor is not completely connected.

- bb: Not used.

- cccc: Not used.

Note:

Connection type and connection number are described in F01375.

See also: p0097 (Select drive object type), r0098 (Actual device topology), p0099 (Device target topology)

**Remedy:**

- adapt the output topology to the permissible requirements.

- commission the device using the commissioning tool.

- for motors with DRIVE-CLiQ, connect the power and DRIVE-CLiQ cable to the same Motor Module (Single Motor Module: DRIVE-CLiQ at X202, Double Motor Module: DRIVE-CLiQ from motor 1 (X1) to X202, from motor 2 (X2) to X203).

For aa = 06 hex = 6 dec and bb = 01 hex = 1 dec:

Correct the Article No. when commissioning using the commissioning tool.

See also: p0097 (Select drive object type), r0098 (Actual device topology), p0099 (Device target topology)

**A01331**

**Topology: At least one component not assigned to a drive object**

**Message value:**

Component number: %1

**Message class:**

Error in the parameterization / configuration / commissioning procedure (18)

**Drive object:**

All objects

**Component:**

None

**Propagation:**

LOCAL

**Reaction:**

NONE

**Acknowledge:**

NONE

**Cause:**

At least one component is not assigned to a drive object.

- when commissioning, a component was not able to be automatically assigned to a drive object.

- the parameters for the data sets are not correctly set.

Alarm value (r2124, interpret decimal):

Component number of the unassigned component.

**Remedy:**

This component is assigned to a drive object.

Check the parameters for the data sets.

Examples:

- power unit (p0121).

- motor (p0131, p0186).

- encoder interface (p0140, p0141, p0187 ... p0189).

- encoder (p0140, p0142, p0187 ... p0189).

- Terminal Module (p0151).

- option board (p0161).

## 4 Faults and alarms

### 4.2 List of faults and alarms

**Remedy:**

- carry out a POWER ON (switch-off/switch-on).
- Distribute components across several DRIVE-CLiQ lines.

Note:

For this topology, do not withdraw and insert components in operation.

---

#### F01360

#### Topology: Actual topology not permissible

**Message value:** Fault cause: %1, preliminary component number: %2

**Message class:** Error in the parameterization / configuration / commissioning procedure (18)

**Drive object:** All objects

**Component:** None

**Propagation:** LOCAL

**Reaction:** NONE

**Acknowledge:** IMMEDIATELY

**Cause:** The detected actual topology is not permissible.

Fault value (r0949, interpret hexadecimal):

ccccbaa hex:

cccc = preliminary component number, bb = no significance, aa = fault cause

aa = 01 hex = 1 dec:

Too many components were detected at the Control Unit. A maximum of 199 components is permissible.

aa = 02 hex = 2 dec:

The component type of a component is not known.

aa = 03 hex = 3 dec:

It is illegal to combine ALM and BLM.

aa = 04 hex = 4 dec:

It is illegal to combine ALM and SLM.

aa = 05 hex = 5 dec:

It is illegal to combine BLM and SLM.

aa = 06 hex = 6 dec:

A CX32 was not directly connected to a permitted Control Unit.

aa = 07 hex = 7 dec:

An NX10 or NX15 was not directly connected to a permitted Control Unit.

aa = 08 hex = 8 dec:

A component was connected to a Control Unit that is not permitted for this purpose.

aa = 09 hex = 9 dec:

A component was connected to a Control Unit with out-of-date firmware.

aa = 0A hex = 10 dec:

Too many components of a particular type detected.

aa = 0B hex = 11 dec:

Too many components of a particular type detected on a single line.

Note:

The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.

**Remedy:**

For fault cause = 1:

Change the configuration. Connect less than 199 components to the Control Unit.

For fault cause = 2:

Remove the component with unknown component type.

For fault cause = 3, 4, 5:

Establish a valid combination.

For fault cause = 6, 7:

Connect the expansion module directly to a permitted Control Unit.

For fault cause = 8:

Remove component or use a permissible component.

For fault cause = 9:

Upgrade the firmware of the Control Unit to a later version.

For fault cause = 10, 11:

Reduce the number of components.

In this case, it is not permissible that an existing Hub Module is connected elsewhere.<br>11: For DRIVE-CLiQ Hub Modules, only Sensor Modules (SMC, SME) and DRIVE-CLiQ encoders may be connected to X501 to X505.<br>12: Only certain Motor Modules may be used for expansion axes. |

## 4 Faults and alarms

### 4.2 List of faults and alarms

- 13: For an S120 Combi with 3 axes, nothing must be connected at the DRIVE-CLiQ Hub Module at X503.
- 14: A maximum of one Terminal Module 54F (TM54F) is permitted.
- 15: A maximum of one DRIVE-CLiQ Hub Module (DMC20, DME20) is permitted.
- 16: DRIVE-CLiQ socket X100 of NX15 must be connected with the NCU via X102.
- 17: The S120 Combi may only be connected to X101 of the NX15 via the DRIVE-CLiQ socket X200.
- 18: In DRIVE-CLiQ socket X102 on the NX15, only one Single Motor Module (SMM) may be connected via X200, one Double Motor Module (DMM) via X200, one Terminal Module 54F (TM54F) via X500 or one DRIVE-CLiQ Hub Module (DMC20, DME20) via X500.
- 19: It is not permissible that anything is connected at DRIVE-CLiQ socket X103 on the NX15.

**Remedy:** Evaluate the alarm value and ensure compliance with the corresponding topology rule(s).

#### F01375

#### Topology: Connection duplicated between two components

**Message value:** Component: %1, %2, connection: %3

**Message class:** Error in the parameterization / configuration / commissioning procedure (18)

**Drive object:** All objects

**Component:** None

**Propagation:** LOCAL

**Reaction:** NONE

**Acknowledge:** IMMEDIATELY

**Cause:** When checking the actual topology, a ring-type connection was detected.

The fault value describes a component contained in the ring.

Fault value (r0949, interpret hexadecimal):

ccbbaaaa hex:

cc = connection number (%3)

bb = component class (% 2)

aaaa = preliminary component number (%1)

Component class:

0: Component unknown.

1: Control Unit

2: Motor Module

3: Line Module

4: Sensor Module

5: Voltage Sensing Module

6: Terminal Module

7: DRIVE-CLiQ Hub Module

8: Controller Extension

9: Filter Module

10: Hydraulic Module.

49: DRIVE-CLiQ component

50: Option slot

60: Encoder

70: DRIVE-CLiQ motor

71: Hydraulic cylinder

72: Hydraulic valve

80: Motor

Connection number:

0: Port 0, 1: Port 1, 2: Port 2, 3: Port 3, 4: Port 4, 5: Port 5

10: X100, 11: X101, 12: X102, 13: X103, 14: X104, 15: X105

20: X200, 21: X201, 22: X202, 23: X203

50: X500, 51: X501, 52: X502, 53: X503, 54: X504, 55: X505

**Remedy:** Output the fault value and remove the specified connection.

Note:

Under "Topology --> Topology view" the commissioning tool where relevant offers improved diagnostics capability (e.g. setpoint/actual value comparison).

|-----------------------|--|---------------------|-------|
| <b>Message value:</b> | %1   |                     |       |
| <b>Message class:</b> | Error in the parameterization / configuration / commissioning procedure (18)   |                     |       |
| <b>Drive object:</b>  | All objects  |                     |       |
| <b>Component:</b>     | None   | <b>Propagation:</b> | LOCAL |
| <b>Reaction:</b>      | NONE   |                     |       |
| <b>Acknowledge:</b>   | IMMEDIATELY  |                     |       |
| <b>Cause:</b>         | <p>An error was detected in the target topology.</p> <p>The target topology is invalid.</p> <p>Fault value (r0949, interpret hexadecimal):</p> <p>ccccbbaa hex: cccc = index error, bb = component number, aa = fault cause</p> <p>aa = 1B hex = 27 dec: Error not specified.<br/>aa = 1C hex = 28 dec: Value illegal.<br/>aa = 1D hex = 29 dec: Incorrect ID.<br/>aa = 1E hex = 30 dec: Incorrect ID length.<br/>aa = 1F hex = 31 dec: Too few indices left.<br/>aa = 20 hex = 32 dec: component not connected to Control Unit.</p> |                     |       |
| <b>Remedy:</b>        | Download the target topology again using the commissioning tool.   |                     |       |

---

#### A01481 (N)

#### Topology: power unit not connected

|                       |  |                     |       |
|-----------------------|--|---------------------|-------|
| <b>Message value:</b> | Component: %1, to %2, %3, connection: %4   |                     |       |
| <b>Message class:</b> | Error in the parameterization / configuration / commissioning procedure (18)   |                     |       |
| <b>Drive object:</b>  | CU_I, CU_I_D410, CU_LINK, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_DP, CU_S120_PN, CU_S150_DP, CU_S150_PN, ENC, HLA, HUB, TB30, TM120, TM15, TM150, TM15DI_DO, TM17, TM31, TM54F_MA, TM54F_SL |                     |       |
| <b>Component:</b>     | None   | <b>Propagation:</b> | LOCAL |
| <b>Reaction:</b>      | NONE   |                     |       |
| <b>Acknowledge:</b>   | NONE   |                     |       |

**Cause:** The topology comparison has detected a power unit that is missing in the actual topology with respect to the target topology.  
Alarm value (r2124, interpret hexadecimal):  
ddccbbaa hex:  
dd = connection number (%4)  
cc = component number (%3)  
bb = component class (% 2)  
aa = component number of the component that has not been inserted (% 1)  
Note:  
The component is described in dd, cc and bb, where the component has not been inserted.  
Component class and connection number are described in F01375.

**Remedy:** Adapting topologies:  
- insert the components involved at the right connection (correct the actual topology).  
- adapt the project/parameterizing in the commissioning tool (correct the target topology).  
Check the hardware:  
- check the 24 V supply voltage.  
- check DRIVE-CLiQ cables for interruption and contact problems.  
- check that the component is working properly.  
Note:  
Under "Topology --> Topology view" the commissioning tool where relevant offers improved diagnostics capability (e.g. setpoint/actual value comparison).

**A01508 BICO: Interconnections to inactive objects exceeded**

**Message value:** -

**Message class:** Error in the parameterization / configuration / commissioning procedure (18)

**Drive object:** All objects

**Component:** None **Propagation:** BICO

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** The maximum number of BICO interconnections (signal sinks) when deactivating a drive object was exceeded.  
 When deactivating a drive object, all BICO interconnections (signal sinks) are listed in the following parameters:  
 - r9498[0...29]: List of the BI/CI parameters involved.  
 - r9499[0...29]: List of the associated BO/CO parameters.

**Remedy:** Not necessary.  
 This alarm is automatically withdrawn as soon as no BICO interconnection is entered in r9498[29] and r9499[29] (value = 0).  
 Notice:  
 When re-activating the drive object, all BICO interconnections should be checked and if required, re-established.

---

**F01510 BICO: Signal source is not float type**

**Message value:** Parameter: %1

**Message class:** Error in the parameterization / configuration / commissioning procedure (18)

**Drive object:** All objects

**Component:** None **Propagation:** BICO

**Reaction:** NONE

**Acknowledge:** IMMEDIATELY

**Cause:** The requested connector output does not have the correct data type. This interconnection is not established.  
 Fault value (r0949, interpret decimal):  
 Parameter number to which an interconnection should be made (connector output).

**Remedy:** Interconnect this connector input with a connector output having a float data type.

---

**F01511 (A) BICO: Interconnection with different scalings**

**Message value:** Parameter: %1

**Message class:** Error in the parameterization / configuration / commissioning procedure (18)

**Drive object:** All objects

**Component:** None **Propagation:** BICO

**Reaction:** NONE

**Acknowledge:** IMMEDIATELY

**A01514 (F) BICO: Error when writing during a reconnect**

**Message value:** Parameter: %1  
**Message class:** Error in the parameterization / configuration / commissioning procedure (18)  
**Drive object:** All objects  
**Component:** None **Propagation:** BICO  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** During a reconnect operation (e.g. while booting or downloading - but can also occur in normal operation) a parameter was not able to be written to.  
 Example:  
 When writing to BICO input with double word format (DWORD), in the second index, the memory areas overlap (e.g. p8861). The parameter is then reset to the factory setting.  
 Alarm value (r2124, interpret decimal):  
 Parameter number of the BICO input (signal sink).  
**Remedy:** Not necessary.  
 Reaction upon F: NONE  
 Acknowl. upon F: IMMEDIATELY

**F01515 (A) BICO: Writing to parameter not permitted as the master control is active**

**Message value:** -  
**Message class:** Error in the parameterization / configuration / commissioning procedure (18)  
**Drive object:** All objects  
**Component:** None **Propagation:** GLOBAL  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** When changing the number of CDS or when copying from CDS, the master control is active.  
**Remedy:** If required, return the master control and repeat the operation.  
 Reaction upon A: NONE  
 Acknowl. upon A: NONE

**A01590 (F) Drive: Motor maintenance interval expired**

**Message value:** Fault cause: %1 bin  
**Message class:** General drive fault (19)  
**Drive object:** All objects  
**Component:** Motor **Propagation:** GLOBAL  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The selected service/maintenance interval for this motor was reached.  
 Alarm value (r2124, interpret decimal):  
 Motor data set number.  
 See also: p0650 (Actual motor operating hours), p0651 (Motor operating hours maintenance interval)  
**Remedy:** carry out service/maintenance and reset the service/maintenance interval (p0651).  
 Reaction upon F: NONE  
 Acknowl. upon F: IMMEDIATELY

2001: Feedback signal of STO shutdown for both monitoring channels different. This value can also subsequently occur as a result of other faults.

2002: Status of the delay timer SS1 for both monitoring channels different (status of the timer in p9650/p9850).

2003: Status of the STO terminal for both monitoring channels different.

2004: Status of the STO selection for Motor Modules connected in parallel different.

2005: Feedback signal of the safe pulse suppression on the Control Unit and Motor Modules connected in parallel different.

6000 ... 6999:

Error in the PROFIsafe control.

For these fault values, the failsafe control signals (Failsafe Values) are transferred to the safety functions. If "STOP B after failure of the PROFIsafe communication" (p9612) is parameterized, the transfer of the Failsafe Values is delayed.

6000: A fatal PROFIsafe communication error has occurred.

6064 ... 6071: error when evaluating the F parameter. The values of the transferred F parameters do not match the expected values in the PROFIsafe driver.

6064: Destination address and PROFIsafe address are different (F\_Dest\_Add).

6065: Destination address not valid (F\_Dest\_Add).

6066: Source address not valid (F\_Source\_Add).

6067: Watchdog time not valid (F\_WD\_Time).

6068: Incorrect SIL level (F\_SIL).

6069: Incorrect F-CRC length (F\_CRC\_Length).

6070: Incorrect F parameter version (F\_Par\_Version).

6071: CRC error for the F parameters (CRC1). The transferred CRC value of the F parameters does not match the value calculated in the PROFIsafe driver.

6072: F parameterization is inconsistent.

6165: A communications error was identified when receiving the PROFIsafe telegram. The fault may also occur if an inconsistent or out-of-date PROFIsafe telegram has been received after switching the Control Unit off and on or after plugging in the PROFIBUS/PROFINET cable.

6166: A time monitoring error (timeout) was identified when receiving the PROFIsafe telegram.

#### Remedy:

For fault value = 1 ... 5 and 7 ... 999:

- check the cross data comparison that resulted in a STOP F.
- carry out a POWER ON (switch-off/switch-on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.

For fault value = 6:

- carry out a POWER ON (switch-off/switch-on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.

For fault value = 1000:

- check the EP terminal at the Motor Module (contact problems).
- PROFIsafe: Remove contact problems/faults at the PROFIBUS master/PROFINET controller.
- check the wiring of the failsafe inputs at the TM54F (contact problems).
- check the discrepancy time, and if required, increase the value (p9650/p9850).

For fault value = 1001, 1002:

- carry out a POWER ON (switch-off/switch-on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.

For fault value = 1900, 1901, 1902:

- carry out a POWER ON (switch-off/switch-on) for all components.
- upgrade the Control Unit software.
- replace Control Unit.

For fault value = 2000, 2001, 2002, 2003, 2004, 2005:

- check the discrepancy time, and if required, increase the value (p9650/p9850, p9652/p9852).
- check the wiring of the safety-relevant inputs (SGE) (contact problems).
- check the causes of the STO selection in r9772. When the SMM functions are active (p9501 = 1), STO can also be selected using these functions.
- replace the Motor Module involved.
- diagnose the other active faults and resolve the causes.

Note:

This fault can be acknowledged after removing the cause of the error and after correct selection/deselection of STO.

For fault value = 6000:

- carry out a POWER ON (switch-off/switch-on) for all components.
- check whether there is a DRIVE-CLiQ communication error between the two monitoring channels and, if required, carry out a diagnostics routine for the faults identified.
- increase the monitoring cycle clock settings (p9500, p9511).
- upgrade firmware to later version.
- contact Technical Support.
- replace the Control Unit.

For fault value = 6064:

- check the setting of the value in the F parameter F\_Dest\_Add at the PROFIsafe slave.
- check the setting of the PROFIsafe address of the Control Unit (p9610) and that of the Motor Module (p9810).

For fault value = 6065:

- check the setting of the value in the F parameter F\_Dest\_Add at the PROFIsafe slave. It is not permissible for the destination address to be either 0 or FFFF!

For fault value = 6066:

- check the setting of the value in the F parameter F\_Source\_Add at the PROFIsafe slave. It is not permissible for the source address to be either 0 or FFFF!

For fault value = 6067:

- check the setting of the value in the F parameter F\_WD\_Time at the PROFIsafe slave. It is not permissible for the watch time to be 0!

For fault value = 6068:

- check the setting of the value in the F parameter F\_SIL at the PROFIsafe slave. The SIL level must correspond to SIL2!

For fault value = 6069:

- check the setting of the value in the F parameter F\_CRC\_Length at the PROFIsafe slave. The setting of the CRC2 length is 2-byte CRC in the V1 mode and 3-byte CRC in the V2 mode!

For fault value = 6070:

- check the setting of the value in the F parameter F\_Par\_Version at the PROFIsafe slave. The value for the F parameter version is 0 in the V1 mode and 1 in the V2 mode!

For fault value = 6071:

- check the settings of the values of the F parameters and the F parameter CRC (CRC1) calculated from these at the PROFIsafe slave and, if required, update.

For fault value = 6072:

- check the settings of the values for the F parameters and, if required, correct.

The following combinations are permissible for F parameters F\_CRC\_Length and F\_Par\_Version:

F\_CRC\_Length = 2-byte CRC and F\_Par\_Version = 0

F\_CRC\_Length = 3-byte CRC and F\_Par\_Version = 1

For fault value = 6165:

- if the fault occurs after powering up the Control Unit or after plugging in the PROFIBUS/PROFINET cable, acknowledge the fault.
- check the configuration and communication at the PROFIsafe slave.
- check the setting of the value for F parameter F\_WD\_Time on the PROFIsafe slave and increase if necessary.
- check whether there is a DRIVE-CLiQ communication error between the two monitoring channels and, if required, carry out a diagnostics routine for the faults identified.
- check whether all F parameters of the drive match the F parameters of the F host.

## 4 Faults and alarms

### 4.2 List of faults and alarms

For fault value = 6166:

- check the configuration and communication at the PROFIsafe slave.
- check the setting of the value for F parameter F\_WD\_Time on the PROFIsafe slave and increase if necessary.
- evaluate diagnostic information in the F host.
- check PROFIsafe connection.
- check whether all F parameters of the drive match the F parameters of the F host.

6071: CRC error for the F parameters (CRC1). The transferred CRC value of the F parameters does not match the value calculated in the PROFIsafe driver.  
6072: F parameterization is inconsistent.  
6165: A communications error was identified when receiving the PROFIsafe telegram. The fault may also occur if an inconsistent or out-of-date PROFIsafe telegram has been received after switching the Control Unit off and on or after plugging in the PROFIBUS/PROFINET cable.  
6166: A time monitoring error (timeout) was identified when receiving the PROFIsafe telegram.

**Remedy:**

- For fault value = 1 ... 5 and 7 ... 999:
- check the cross data comparison that resulted in a STOP F.
  - carry out a POWER ON (switch-off/switch-on) for all components.
  - upgrade the Hydraulic Module software.
  - upgrade the Control Unit software.
- For fault value = 6:
- carry out a POWER ON (switch-off/switch-on) for all components.
  - upgrade the Hydraulic Module software.
  - upgrade the Control Unit software.
- For fault value = 1000:
- check the STO terminal at the Hydraulic Module (contact problems).
  - PROFIsafe: Remove contact problems/faults at the PROFIBUS master/PROFINET controller.
  - check the wiring of the failsafe inputs at the TM54F (contact problems).
  - check the discrepancy time, and if required, increase the value (p9650/p9850).
- For fault value = 1001, 1002:
- carry out a POWER ON (switch-off/switch-on) for all components.
  - upgrade the Hydraulic Module software.
  - upgrade the Control Unit software.
- For fault value = 1900, 1901, 1902:
- carry out a POWER ON (switch-off/switch-on) for all components.
  - upgrade the Control Unit software.
  - replace Control Unit.

For fault value = 2000, 2001, 2002, 2003:

- check the discrepancy time, and if required, increase the value (p9650/p9850, p9652/p9852).
- check the wiring of the safety-relevant inputs (SGE) (contact problems).
- check the causes of the STO selection in r9772. When the SMM functions are active (p9501 = 1), STO can also be selected using these functions.
- replace Hydraulic Module involved.

Note:

This fault can be acknowledged after removing the cause of the error and after correct selection/deselection of STO.

For fault value = 6000:

- carry out a POWER ON (switch-off/switch-on) for all components.
- check whether there is a DRIVE-CLiQ communication error between the two monitoring channels and, if required, carry out a diagnostics routine for the faults identified.
- increase the monitoring cycle clock settings (p9500, p9511).
- upgrade firmware to later version.
- contact Technical Support.
- replace the Control Unit.

For fault value = 6064:

- check the setting of the value in the F parameter F\_Dest\_Add at the PROFIsafe slave.
- check the setting of the PROFIsafe address of the Control Unit (p9610) and that of the hydraulic module (p9810).

For fault value = 6065:

- check the setting of the value in the F parameter F\_Dest\_Add at the PROFIsafe slave. It is not permissible for the destination address to be either 0 or FFFF!

For fault value = 6066:

- check the setting of the value in the F parameter F\_Source\_Add at the PROFIsafe slave. It is not permissible for the source address to be either 0 or FFFF!

For fault value = 6067:

- check the setting of the value in the F parameter F\_WD\_Time at the PROFIsafe slave. It is not permissible for the watch time to be 0!

For fault value = 6068:

- check the setting of the value in the F parameter F\_SIL at the PROFIsafe slave. The SIL level must correspond to SIL2!

For fault value = 6069:

- check the setting of the value in the F parameter F\_CRC\_Length at the PROFIsafe slave. The setting of the CRC2 length is 2-byte CRC in the V1 mode and 3-byte CRC in the V2 mode!

For fault value = 6070:

- check the setting of the value in the F parameter F\_Par\_Version at the PROFIsafe slave. The value for the F parameter version is 0 in the V1 mode and 1 in the V2 mode!

For fault value = 6071:

- check the settings of the values of the F parameters and the F parameter CRC (CRC1) calculated from these at the PROFIsafe slave and, if required, update.

For fault value = 6072:

- check the settings of the values for the F parameters and, if required, correct.

The following combinations are permissible for F parameters F\_CRC\_Length and F\_Par\_Version:

F\_CRC\_Length = 2-byte CRC and F\_Par\_Version = 0

F\_CRC\_Length = 3-byte CRC and F\_Par\_Version = 1

For fault value = 6165:

- if the fault occurs after powering up the Control Unit or after plugging in the PROFIBUS/PROFINET cable, acknowledge the fault.
- check the configuration and communication at the PROFIsafe slave.
- check the setting of the value for F parameter F\_WD\_Time on the PROFIsafe slave and increase if necessary.
- check whether there is a DRIVE-CLiQ communication error between the two monitoring channels and, if required, carry out a diagnostics routine for the faults identified.
- check whether all F parameters of the drive match the F parameters of the F host.

For fault value = 6166:

- check the configuration and communication at the PROFIsafe slave.
- check the setting of the value for F parameter F\_WD\_Time on the PROFIsafe slave and increase if necessary.
- evaluate diagnostic information in the F host.
- check PROFIsafe connection.
- check whether all F parameters of the drive match the F parameters of the F host.

**F01612 SI P1 (CU): STO inputs for power units connected in parallel different**

**Message value:** Fault cause: %1 bin

**Message class:** Safety monitoring channel has identified an error (10)

**Drive object:** SERVO, SERVO\_AC, SERVO\_I\_AC, VECTOR, VECTOR\_AC, VECTOR\_I\_AC

**Component:** None **Propagation:** GLOBAL

**Reaction:** NONE (OFF1, OFF2, OFF3)

**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:** The drive-integrated "Safety Integrated" function on the Control Unit (CU) has identified different states of the AND'ed STO inputs for power units connected in parallel and has initiated a STOP F.

As a result of this fault, after the parameterized transition has expired (p9658), fault F01600 (SI CU: STOP A initiated) is output.

Fault value (r0949, interpret binary):

Binary image of the digital inputs of the Control Unit that are used as signal source for the function "Safe Torque Off".

**Remedy:** - check the tolerance time SGE changeover and if required, increase the value (p9650).

- check the wiring of the safety-relevant inputs (SGE) (contact problems).

Note:

CU: Control Unit

SGE: Safety-relevant input

SI: Safety Integrated

STO: Safe Torque Off / SH: Safe standstill

---

**N01620 (F, A) SI P1 (CU): Safe Torque Off active**

**Message value:** -

**Message class:** Safety monitoring channel has identified an error (10)

**Drive object:** HLA, SERVO, SERVO\_AC, SERVO\_I\_AC, VECTOR, VECTOR\_AC, VECTOR\_I\_AC

**Component:** Control Unit (CU) **Propagation:** GLOBAL

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** The "Safe Torque Off" (STO) function of the basic functions has been selected on the Control Unit (CU) using the input terminal and is active.

Note:

- this message does not result in a safety stop response.

- this message is not output when STO is selected using the Extended Functions.

## 4 Faults and alarms

### 4.2 List of faults and alarms

**Remedy:** Not necessary.  
Note:  
CU: Control Unit  
SI: Safety Integrated  
STO: Safe Torque Off / SH: Safe standstill

Reaction upon F: OFF2  
Acknowl. upon F: IMMEDIATELY (POWER ON)  
Reaction upon A: NONE  
Acknowl. upon A: NONE

---

**N01621 (F, A) SI P1 (CU): Safe Stop 1 active**

**Message value:** -  
**Message class:** Safety monitoring channel has identified an error (10)  
**Drive object:** HLA, SERVO, SERVO\_AC, SERVO\_I\_AC, VECTOR, VECTOR\_AC, VECTOR\_I\_AC  
**Component:** Control Unit (CU) **Propagation:** GLOBAL  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The "Safe Stop 1" (SS1) function has been selected on the Control Unit (CU) and is active.  
Note:  
This message does not result in a safety stop response.

**Remedy:** Not necessary.  
Note:  
CU: Control Unit  
SI: Safety Integrated  
SS1: Safe Stop 1

Reaction upon F: NONE (OFF3)  
Acknowl. upon F: IMMEDIATELY (POWER ON)  
Reaction upon A: NONE  
Acknowl. upon A: NONE

**F01625 SI P1 (CU): Sign-of-life error in safety data**

**Message value:** %1  
**Message class:** Internal (DRIVE-CLiQ) communication error (12)  
**Drive object:** HLA, SERVO, SERVO\_AC, SERVO\_I\_AC, VECTOR, VECTOR\_AC, VECTOR\_I\_AC  
**Component:** None **Propagation:** GLOBAL  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY (POWER ON)  
**Cause:** The drive-integrated "Safety Integrated" function on the Control Unit (CU) has detected an error in the sign-of-life of the safety data between the two monitoring channels and has initiated a STOP A.  
- there is either a DRIVE-CLiQ communication error or communication has failed.  
- a time slice overflow of the safety software has occurred.  
Fault value (r0949, interpret decimal):  
Only for internal Siemens troubleshooting.

**Remedy:**

- select STO and then deselect again.
- carry out a POWER ON (switch-off/switch-on) for all components.
- check whether there is a DRIVE-CLiQ communication error between the two monitoring channels and, if required, carry out a diagnostics routine for the faults identified.
- deselect all drive functions that are not absolutely necessary.
- reduce the number of drives.
- check the electrical cabinet design and cable routing for EMC compliance

Note:  
CU: Control Unit  
MM: Motor Module  
SI: Safety Integrated  
STO: Safe Torque Off

- Remedy:**
- carry out a POWER ON (switch-off/switch-on) for all components.
  - re-commission the "Safety Integrated" function and carry out a POWER ON.
  - upgrade the firmware of the Control Unit to a later version.
  - contact Technical Support.
  - replace the Control Unit.

Note:

CU: Control Unit

SI: Safety Integrated

---

**F01650**
**SI P1 (CU): Acceptance test required**

**Message value:** %1

**Message class:** Safety monitoring channel has identified an error (10)

**Drive object:** A\_INF, B\_INF, CU\_I, CU\_I\_D410, CU\_LINK, CU\_NX\_CX, CU\_S\_AC\_DP, CU\_S\_AC\_PN, CU\_S120\_DP, CU\_S120\_PN, CU\_S150\_DP, CU\_S150\_PN, ENC, HUB, R\_INF, S\_INF, SERVO, SERVO\_AC, SERVO\_I\_AC, TB30, TM120, TM15, TM150, TM15DI\_DO, TM17, TM31, TM41, TM54F\_MA, TM54F\_SL, VECTOR, VECTOR\_AC, VECTOR\_I\_AC

**Component:** Control Unit (CU)

**Propagation:** LOCAL

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:** The drive-integrated "Safety Integrated" function on monitoring channel 1 requires an acceptance test.

Note:

This fault results in a STOP A that can be acknowledged.

Fault value (r0949, interpret decimal):

130: Safety parameters for monitoring channel 2 not available.

Note:

This fault value is always output when Safety Integrated is commissioned for the first time.

1000: Reference and actual checksum on monitoring channel 1 are not identical (booting).

- as a result of the changed current controller sampling time (p0115[0]), the clock cycle time for the Safety Integrated Basic Functions (r9780) was adapted.

- at least one checksum-checked piece of data is defective.

- safety parameters set offline and loaded into the Control Unit.

2000: Reference and actual checksum on monitoring channel 1 are not identical (commissioning mode).

- reference checksum on monitoring channel 1 incorrectly entered (p9799 not equal to r9798).

- when deactivating the safety functions, p9501 or p9503 were not deleted.

2001: Reference and actual checksum on monitoring channel 2 are not identical (commissioning mode).

- reference checksum on monitoring channel 2 incorrectly entered (p9899 not equal to r9898).

- when deactivating the safety functions, p9501 or p9503 are not deleted.

2002: Enable of safety-related functions between the two monitoring channels differ (p9601 not equal to p9801).

2003: Acceptance test is required as a safety parameter has been changed.

2004: An acceptance test is required because a project with enabled safety-functions has been downloaded.

2005: The Safety logbook has identified that a functional safety checksum has changed. An acceptance test is required.

2010: Enable of safety-related brake control between the two monitoring channels differ (p9602 not equal to p9802).

2020: Error when saving the safety parameters for the monitoring channel 2.

3003: Acceptance test is required as a hardware-related safety parameter has been changed.

3005: The Safety logbook has identified that a hardware-related safety checksum has changed. An acceptance test is required.

9999: Subsequent response of another safety-related fault that occurred when booting that requires an acceptance test.

**Remedy:**

For fault value = 130:  
 - carry out safety commissioning routine.

For fault value = 1000:  
 - check the Safety Integrated Basic Functions (r9780) and adapt the reference checksum (p9799).  
 - again carry out safety commissioning routine.  
 - replace the memory card or Control Unit.  
 - Using STARTER, activate the safety parameters for the drive involved (change settings, copy parameters, activate settings).

For fault value = 2000:  
 - check the safety parameters on monitoring channel 1 and adapt the reference checksum (p9799).

For fault value = 2001:  
 - check the safety parameters on monitoring channel 2 and adapt the reference checksum (p9899).

For fault value = 2002:  
 - check the enable the safety-related functions on both monitoring channels (p9601 = p9801).

For fault value = 2003, 2004, 2005:  
 - carry out an acceptance test and generate an acceptance report.  
 The procedure when carrying out an acceptance test as well as an example of the acceptance report are provided in the following literature:  
 SINAMICS S120 Function Manual Safety Integrated  
 Note:  
 The fault with fault value 2005 can only be acknowledged when the "STO" function is deselected.

For fault value = 2010:  
 - check the enable the safety-related brake control on both monitoring channels (p9602 = p9802).

For fault value = 2020:  
 - again carry out safety commissioning routine.  
 - replace the memory card or Control Unit.

For fault value = 3003:  
 - carry out the function checks for the modified hardware and generate an acceptance report.  
 The procedure when carrying out an acceptance test as well as an example of the acceptance report are provided in the following literature:  
 SINAMICS S120 Function Manual Safety Integrated

For fault value = 3005:  
 - carry out the function checks for the modified hardware and generate an acceptance report.  
 The fault with fault value 3005 can only be acknowledged when the "STO" function is deselected.

For fault value = 9999:  
 - carry out diagnostics for the other safety-related fault that is present.

Note:  
 CU: Control Unit  
 MM: Motor Module  
 SI: Safety Integrated  
 STO: Safe Torque Off

112:

- An actual value sensing clock cycle  $p9511 = 0$  on a drive object of a Double Motor Module is not permissible in the existing configuration.

200, 201:

- S120M: the monitoring clock cycle cannot be maintained as a result of the conditions required in the system.

202:

- the current controller sampling time is set to zero ( $p0115[0]$ ).

#### Remedy:

For enabled SI monitoring integrated in the drive ( $p9601/p9801 > 0$ ):

- upgrade the firmware of the Control Unit to a later version.

For enabled motion monitoring function ( $p9501 > 0$ ):

- correct the monitoring clock cycle ( $p9500$ ) and carry out POWER ON.

For fault value = 100:

- for S120M, set the actual value sensing clock cycle to  $p9511 = 0$ .

For fault value = 101:

- actual value sensing clock cycle corresponds to position control clock cycle/DP clock cycle (factory setting).

- for motion monitoring functions integrated in the drive ( $p9601/p9801\text{bit } 2 = 1$ ) the actual value sensing clock cycle can be directly parameterized in  $p9511/p9311$ .

- SINAMICS S120M: set the monitoring clock cycle ( $p9500$ ) to an integer multiple of 2 ms.

For fault value = 104, 105:

- set a separate actual value sensing clock cycle in  $p9511$ .

- restrict operation to a maximum of two vector drives. For the standard setting in  $p0112$ ,  $p0115$ , the current controller sampling time is automatically reduced to 250  $\mu\text{s}$ . If the standard values were changed, then the current controller sampling time ( $p0112$ ,  $p0115$ ) should be appropriately set.

- increase the DP clock cycle for operation with an isochronous PROFIBUS so that there is a multiple clock cycle ratio of at least 4:1 between the DP clock cycle and the current controller sampling time. A clock cycle ratio of at least 8:1 is recommended.

- With firmware version 2.5, please ensure that parameter  $p9510$  is set to 1 in the drive (clock cycle synchronous operation).

For fault value = 106:

- set the parameters for the monitoring clock cycles the same ( $p10000$  and  $p9500/p9300$ ).

For fault value = 107:

- set an actual value sensing clock cycle that matches the current controller clock cycle ( $p9511 \geq 4 * p0115[0]$ ,  $8 * p0115[0]$ ) is recommended.

Note:

An actual value sensing clock cycle ( $p9511$ ) that is set too low, can sporadically mean that safety messages C01711/C30711 are output with message value 1020 or 1021.

For fault value = 108:

- set a suitable actual value sensing clock cycle in  $p9511$ .

- if the DP clock cycle is used as the actual value sensing clock cycle for operation with isochronous PROFIBUS ( $p9511 = 0$ ), then a suitable DP clock cycle must be configured. This must be set to less than 8 ms. If this is not possible, then  $p9511$  must be set to the required actual value sensing clock cycle ( $< 8$  ms).

- For SIMOTION D410-2, a suitable multiple of the DP clock cycle (e.g. 1, 2, 3, 4, 5, 6, 8, 10) must be parameterized. Otherwise, the clock cycle must be set to less than 8 ms.

For fault value = 109:

- set the actual value sensing clock cycle in  $p9511$  to the same value as the current controller clock cycle ( $p0115[0]$ ).

- SINAMICS S110: set the actual value sensing clock cycle to  $p9511 = 250 \mu\text{s}$ .

For fault value = 110:

- set the actual value sensing clock cycle in  $p9511$  to 2 ms or higher.

For fault value = 111:

- set the monitoring clock cycle in  $p9500$  as an integer multiple of the sampling time of the current controller ( $p0115[0]$ ).

For fault value = 112:

- set the actual value sensing clock cycle  $p9511$  to the required value (not equal to zero).

For fault value = 200, 201:

- increase the current controller sampling time ( $p0115[0]$ ).

- if required, reduce the number of components connected to the corresponding DRIVE-CLiQ line, or distribute the components across several DRIVE-CLiQ sockets.

For fault value = 202:

- set the current controller sampling time to a sensible value (p0115[0]).

## 4 Faults and alarms

### 4.2 List of faults and alarms

**Remedy:**

For enabled SI monitoring integrated in the drive (p9601/p9801 > 0):

- upgrade the firmware of the Control Unit to a later version.

For enabled motion monitoring function (p9501 > 0):

- correct the monitoring clock cycle (p9500) and carry out POWER ON.

For fault value = 100:

- for S120M, set the actual value sensing clock cycle to p9511 = 0.

For fault value = 101:

- actual value sensing clock cycle corresponds to position control clock cycle/DP clock cycle (factory setting).
- for motion monitoring functions integrated in the drive (p9601/p9801bit 2 = 1) the actual value sensing clock cycle can be directly parameterized in p9511/p9311.

For fault value = 104, 105:

- set a separate actual value sensing clock cycle in p9511.
- restrict operation to a maximum of two vector drives. For the standard setting in p0112, p0115, the current controller sampling time is automatically reduced to 250 µs. If the standard values were changed, then the current controller sampling time (p0112, p0115) should be appropriately set.
- increase the DP clock cycle for operation with an isochronous PROFIBUS so that there is a multiple clock cycle ratio of at least 4:1 between the DP clock cycle and the current controller sampling time. A clock cycle ratio of at least 8:1 is recommended.
- With firmware version 2.5, please ensure that parameter p9510 is set to 1 in the drive (clock cycle synchronous operation).

For fault value = 106:

- set the parameters for the monitoring clock cycles the same (p10000 and p9500/p9300).

For fault value = 107:

- set an actual value sensing clock cycle that matches the current controller clock cycle (p9511 >= 4 \* p0115[0], 8 \* p0115[0]) is recommended.

Note:

An actual value sensing clock cycle (p9511) that is set too low, can sporadically mean that safety messages C01711/C30711 are output with message value 1020 or 1021.

For fault value = 108:

- set a suitable actual value sensing clock cycle in p9511.
- if the DP clock cycle is used as the actual value sensing clock cycle for operation with isochronous PROFIBUS (p9511 = 0), then a suitable DP clock cycle must be configured. This must be set to less than 8 ms. If this is not possible, then p9511 must be set to the required actual value sensing clock cycle (< 8 ms).
- For SIMOTION D410-2, a suitable multiple of the DP clock cycle (e.g. 1, 2, 3, 4, 5, 6, 8, 10) must be parameterized. Otherwise, the clock cycle must be set to less than 8 ms.

For fault value = 111:

- set the monitoring clock cycle in p9500 as an integer multiple of the sampling time of the current controller (p0115[0]).

For fault value = 112:

- set the actual value sensing clock cycle p9511 to the required value (not equal to zero).

For fault value = 202:

- set the current controller sampling time to a sensible value (p0115[0]).

|-----------------------|---|
| <b>F01659</b>         | <b>SI P1 (CU): Write request for parameter rejected</b>   |
| <b>Message value:</b> | %1  |
| <b>Message class:</b> | Error in the parameterization / configuration / commissioning procedure (18)  |
| <b>Drive object:</b>  | A_INF, B_INF, R_INF, S_INF, SERVO, SERVO_AC, SERVO_I_AC, TM41, VECTOR, VECTOR_AC, VECTOR_I_AC   |
| <b>Component:</b>     | None  |
| <b>Reaction:</b>      | OFF2  |
| <b>Acknowledge:</b>   | IMMEDIATELY (POWER ON)  |
| <b>Cause:</b>         | The write request for one or several Safety Integrated parameters on the Control Unit (CU) was rejected.  |
|                       | Note:   |
|                       | This fault does not result in a safety stop response.   |
|                       | Fault value (r0949, interpret decimal):   |
|                       | 1: The Safety Integrated password is not set.   |
|                       | 2: A reset of the drive parameters was selected. However, the Safety Integrated parameters were not reset, as Safety Integrated is presently enabled.                                   |
|                       | 3: The interconnected STO input is in the simulation mode.  |
|                       | 10: An attempt was made to enable the STO function although this cannot be supported.   |
|                       | 11: An attempt was made to enable the SBC function although this cannot be supported.   |
|                       | 12: An attempt was made to enable the SBC function although this cannot be supported for a parallel circuit configuration (r9871.14).   |
|                       | 13: An attempt was made to enable the SS1 function although this cannot be supported.   |
|                       | 14: An attempt was made to enable the PROFIsafe communication - although this cannot be supported or the version of the PROFIsafe driver used on both monitoring channels is different. |
|                       | 15: An attempt was made to enable the motion monitoring functions integrated in the drive although these cannot be supported.   |
|                       | 16: An attempt was made to enable the STO function although this cannot be supported when the internal voltage protection (p1231) is enabled.   |
|                       | 17: An attempt was made to enable the PROFIsafe function although this cannot be supported for a parallel circuit configuration.  |
|                       | 18: An attempt was made to enable the PROFIsafe function for Basic Functions although this cannot be supported.   |
|                       | 19: An attempt was made to enable the SBA (Safe Brake Adapter), although this cannot be supported.  |
|                       | 20: An attempt was made to enable the motion monitoring functions integrated in the drive and the STO function, both controlled via F-DI.   |
|                       | 21: An attempt was made to enable the motion monitoring functions integrated in the drive for a parallel connection, although these cannot be supported.                                |
|                       | 22: An attempt was made to enable the Safety Integrated Functions although these cannot be supported by the connected Power Module.   |
|                       | 23: For ESR, an attempt was made to enable the delay of STO, although this cannot be supported.   |
|                       | 24: An attempt was made to enable the SBC function, although no power unit data set is set for the brake control (p7015 = 99).  |
|                       | 25: An attempt was made to parameterize a PROFIsafe telegram although this cannot be supported.   |
|                       | 26: With the selected signal source for STO/SS1, an attempt was made to activate the simulation mode.   |
|                       | 27: An attempt was made to activate the Basic Functions by controlling via TM54F although this is not supported.  |
|                       | 28: An attempt was made to enable the "STO via terminals at the Power Module" function although this cannot be supported.   |
|                       | 29: An attempt was made to parameterize the STOP B as stop response for PROFIsafe failure, although this cannot be supported.   |
|                       | 9612: An attempt was made to parameterize STOP B as stop response for PROFIsafe failure, although PROFIsafe is not enabled.   |
|                       | See also: p0970, p3900, p9612, r9771, r9871   |

**Remedy:**

For fault value = 1:

- set the Safety Integrated password (p9761).

For fault value = 2:

- inhibit Safety Integrated (p9501, p9601) or reset safety parameters (p0970 = 5), then reset the drive parameters again.

For fault value = 3:

- end the simulation mode for the digital input (p0795).

For fault value = 10, 11, 12, 13, 14, 15, 17, 18, 19, 21, 22, 23, 27:

- check whether there are faults in the safety function alignment between the two monitoring channels (F01655, F30655) and if required, carry out diagnostics for the faults involved.
- use a Motor Module that supports the required function.
- upgrade the Motor Module software.
- upgrade the Control Unit software.

For fault value = 16:

- inhibit the internal voltage protection (p1231).

For fault value = 20:

- correct the enable setting (p9601).

For fault value = 22:

- use a Power Module that supports the Safety Integrated Functions.

For fault value = 24:

- set the power unit data set for the holding brake (p7015).

For fault value = 25:

- use a Power Module that supports the PROFIsafe telegram selection.
- correct the telegram number setting (p9611).

For fault value = 26:

- deactivate the simulation mode for the set signal source for STO/SS1 (p9620) (p0795).

For fault value = 28:

- use the power unit with the feature "STO via terminals at the Power Module".

For fault value = 29:

- use a Motor Module that supports the required function.
- upgrade the Motor Module software.
- upgrade the Control Unit software.
- if required, parameterize the stop response for PROFIsafe failure to STOP A (p9612 = p9812 = 0).

For fault value = 33:

- deselect drive integrated motion monitoring without selection (p9601.5, p9801.5) and select safety functions that are supported (see p9771/p9871).
- use a Motor Module that supports the required function.
- upgrade the Motor Module software.
- upgrade the Control Unit software.

For fault value = 9612:

- establish communications with PROFIsafe (p9601).
- parameterize STOP A as the stop response for PROFIsafe failure (p9612 = 0).

Note:

CU: Control Unit

ESR: Extended Stop and Retract

F-DI: Failsafe Digital Input

SBA: Safe Brake Adapter

SBC: Safe Brake Control

SI: Safety Integrated

SS1: Safe Stop 1

| <b>Reaction:</b>      | OFF2   |
| <b>Acknowledge:</b>   | IMMEDIATELY (POWER ON)   |
| <b>Cause:</b>         | The Motor Module/Hydraulic Module does not support the safety-related functions (e.g. the Motor Module/Hydraulic Module version is not the correct one). Safety Integrated cannot be commissioned.<br>Note:<br>This fault does not result in a safety stop response. |

## 4 Faults and alarms

### 4.2 List of faults and alarms

**Remedy:**

- use a Motor Module/Hydraulic Module that supports the safety-related functions.
- upgrade the Motor Module/Hydraulic Module software.

**Note:**  
CU: Control Unit  
SI: Safety Integrated

---

**F01661**      **SI P1 (CU): Simulation of the safety inputs active**

**Message value:**      Fault cause: %1 bin  
**Message class:**      General drive fault (19)  
**Drive object:**      SERVO, SERVO\_AC, SERVO\_I\_AC, VECTOR, VECTOR\_AC, VECTOR\_I\_AC  
**Component:**      Control Unit (CU)                      **Propagation:**      DRIVE  
**Reaction:**      OFF2  
**Acknowledge:**      IMMEDIATELY  
**Cause:**      The simulation of the digital inputs of the Control Unit (p0795) is active.  
It is not permissible that safety inputs are simulated.  
Fault value (r0949, interpret binary):  
The displayed bits indicate which digital inputs must not be simulated.

**Remedy:**

- deactivate the simulation of the digital inputs of the Control Unit for the safety inputs (p0795).
- acknowledge fault.

---

**F01663**      **SI P1 (CU): Copying the SI parameters rejected**

**Message value:**      -  
**Message class:**      Error in the parameterization / configuration / commissioning procedure (18)  
**Drive object:**      HLA, SERVO, SERVO\_AC, SERVO\_I\_AC, VECTOR, VECTOR\_AC, VECTOR\_I\_AC  
**Component:**      None                      **Propagation:**      DRIVE  
**Reaction:**      OFF2  
**Acknowledge:**      IMMEDIATELY (POWER ON)  
**Cause:**      In p9700, the value 87 or 208 is saved or was entered offline.  
This is the reason that when booting, an attempt is made to copy Safety Integrated parameters from monitoring channel 1 to monitoring channel 2. However, no safety-relevant function has been selected in monitoring channel 1 (p9501 = 0, p9601 = 0). Copying was rejected for safety reasons.  
As a consequence, inconsistent parameterization can occur in both monitoring channels, which in turn results in additional error messages.  
Especially for inconsistent enabling of the safety functions on both monitoring channels (p9601 = 0, p9801 <> 0), fault F30625 is output.  
**Note:**  
This fault does not result in a safety stop response.  
SI: Safety Integrated  
See also: p9700 (SI Motion copy function)

**Remedy:**

- set p9700 to 0.
- check p9501 and p9601 and if required, correct.
- restart the copying function by entering the corresponding value into p9700.

Alternatively, using the STARTER commissioning tool, perform the following steps in the online mode:

- call the "Safety Integrated" screen form (the field "Select safety functions" is at "No Safety Integrated").
- click on "Change settings".
- click on "Activate settings" (as a consequence, Safety Integrated is inhibited on both monitoring channels).
- save all parameters (p0977 = 1 or "copy RAM to ROM").
- carry out a POWER ON (switch-off/switch-on) for all components.

---

**F01664**      **SI P1 (CU): No automatic firmware update**

**Message value:**      %1  
**Message class:**      Error in the parameterization / configuration / commissioning procedure (18)  
**Drive object:**      HLA, SERVO, SERVO\_AC, SERVO\_I\_AC, VECTOR, VECTOR\_AC, VECTOR\_I\_AC  
**Component:**      None                      **Propagation:**      DRIVE  
**Reaction:**      OFF2  
**Acknowledge:**      IMMEDIATELY (POWER ON)

|                |  |
|----------------|--|
| <b>Cause:</b>  | During booting, the system detected that the "Firmware update automatic" function (p7826 = 1) was not activated. This function must be activated for automatic firmware updates/downgrades to prevent impermissible version combinations when safety functions are enabled.<br>Note:<br>This fault does not result in a safety stop response.<br>See also: p7826 (Firmware update automatic) |
| <b>Remedy:</b> | When safety functions are enabled (p9501 <> 0 and/or p9601 <> 0):<br>1. Activate the "Firmware update automatic" function (p7826 = 1).<br>2. Backup the parameters (p0977 = 1) and carry out a POWER ON.<br>When deactivating the safety functions (p9501 = 0, p9601 = 0), the fault can be acknowledged after exiting the safety commissioning mode.  |

xxxx = 9506 and yyyy = 1:

Parameter p9506 is not equal to p9306.

xxxx = 9511 and yyyy = 1:

Parameter p9511 is not equal to p9311.

xxxx = 9511 and yyyy = 2:

On a Double Motor Module, between the drive objects, no different values in p9511 and p0115[0] is permitted.

xxxx = 9319:

The fine resolution of the encoder for the second channel is too high.

xxxx = 9522:

The gear stage was set too high.

xxxx = 9534 or 9535:

The limit values of SLP have been set too high (absolute values).

xxxx = 9544:

For linear axes, the maximum value is limited to 1 mm.

xxxx = 9547:

The hysteresis tolerance is not permissible.

xxxx = 9573:

"Referencing via Safety Control Channel" was requested (p9573 = 263), without enabling the function "Referencing via SCC" (p9501.27 = 0).

xxxx = 9576:

The filtering for SLA has been enabled - however, the Motor Module used does not support this function.

xxxx = 9578:

SLA is enabled (p9501.20 = 1). Acceleration limit is too low (p9578). The acceleration resolution is no longer sufficient (r9790).

The minimum limit is x-times the acceleration resolution:

- firmware version 5.1:  $3 * r9790[0]$

- firmware version 5.2 and higher:  $10 * r9790[1]$

xxxx = 9585:

For Safety without encoder and synchronous motor, p9585 must be set to 4.

xxxx = 9601 and yyyy = 1:

If motion monitoring functions integrated in the drive (p9601.2 = 1) and extended functions without selection (p9601.5 = 1) are enabled, then PROFIsafe (p9601.3 = 1) or onboard F-DI (p9601.4 = 1) is not possible.

xxxx = 9601 and yyyy = 2:

Extended functions without selection (p9601.5 = 1) are enabled without enabling motion monitoring functions integrated in the drive (p9601.2).

xxxx = 9601 and yyyy = 3:

Onboard F-DI are enabled without enabling motion monitoring functions integrated in the drive (p9601.2).

xxxx = 9601 and yyyy = 4:

Onboard F-DI are enabled. Then, it is not permissible to simultaneously set PROFIsafe and F-DI via PROFIsafe (p9501.30).

xxxx = 9601 and yyyy = 5:

Transfer of the SLS limit value via PROFIsafe (p9501.24) has been enabled, without enabling PROFIsafe.

xxxx = 9601 and yyyy = 6:

Transfer of the safe position via PROFIsafe (p9501.25) has been enabled, without enabling PROFIsafe.

xxxx = 9601 and yyyy = 7:

Safe switchover of the gearbox stages (p9501.26) has been enabled without enabling PROFIsafe.

xxxx = 9601 and yyyy = 11:

SS2E (p9501.18 = 1) is enabled without PROFIsafe being enabled.

xxxx = 9601 and yyyy = 12:

SCA (p9501.28 = 1) is enabled without enabling PROFIsafe.

xxxx = 9601 and yyyy = 18:

SLA (p9501.20 = 1) is enabled without enabling PROFIsafe.

xxxx = 9601 and yyyy = 21:

SS2ESR (p9501.4 = 1) is enabled without enabling PROFIsafe.

**Remedy:** Correct parameter (if required, also on another monitoring channel, p9801).  
If xxxx = 9500 and yyyy = 1:  
- set p9500 "SI Motion monitoring clock cycle" as an integer multiple of p0115[0] "Current controller sampling time".  
- align parameters 9300 and 9500, backup parameters (p0971 = 1) and carry out a POWER ON.  
For xxxx = 9500 and yyyy = 16:  
Inhibit "Synchronous safe position via PROFIsafe" function (p9501.29 = 0), or set monitoring clock cycle p9500 on all axes the same when the function is enabled.  
If xxxx = 9501:  
- correct parameters p9501.16 and p9301.16, or deselect the extended functions without selection (p9601.5).  
If xxxx = 9501 and yyyy = 8:  
Inhibit referencing via SCC (p9501.27) or enable an absolute motion monitoring function (p9501.1 or p9501.2).  
If xxxx = 9501 and yyyy = 10:  
Inhibit referencing via SCC (p9501.27) or EPOS (r0108.4).  
For xxxx = 9501 and yyyy = 11:  
Inhibit SS2E (p9501.18) - or enable PROFIsafe.  
For xxxx = 9501 and yyyy = 12:  
Inhibit SCA (p9501.28) - or enable PROFIsafe.  
For xxxx = 9501 and yyyy = 14:  
Inhibit "Synchronous safe position via PROFIsafe" function (p9501.29 = 0), or enable "Safe position via PROFIsafe" (p9501.25).  
For xxxx = 9501 and yyyy = 17:  
Inhibit "Synchronous safe position via PROFIsafe" function (p9501.29 = 0), or set "Safety with encoder" (p9506).  
For xxxx = 9501 and yyyy = 19:  
Inhibit SLA (p9501.20) or activate actual value sensing with encoder (p9506 equal to 0 or 2).  
For xxxx = 9501 and yyyy = 20:  
Inhibit SLA (p9501.20) or activate a 1-encoder system (p9526 equal to 1).  
For xxxx = 9505:  
Correct parameter p9501.1 or p9505.  
For xxxx = 9507:  
Set synchronous or induction motor according to p0300.  
For xxxx = 9506:  
Align parameters p9306 and p9506, back up the parameters (p0971 = 1) and carry out a POWER ON.  
For xxxx = 9511:  
Align parameters p9311 and p9511, back up the parameters (p0971 = 1) and carry out a POWER ON.  
For xxxx = 9517:  
Parameter p9516.0 should also be checked.  
For xxxx = 9319:  
For the SCSE encoder, parameter p9319 must not be set higher than 11.  
For xxxx = 9522:  
Correct the corresponding parameter.  
For xxxx = 9534 or 9535:  
Reduce the limit values (absolute values) of SLP.  
For xxxx = 9544:  
Correct parameter (for linear axes, the maximum value is limited to 1 mm).  
For xxxx = 9547:  
With hysteresis/filtering enabled (p9501.16 = 1), the following applies:  
- set parameters p9546 and p9547 according to the following rule:  $p9547 \leq 0.75 \times p9546$   
- if the actual value synchronization is enabled (p9501.3 = 1), then this rule must be complied with:  $p9547 \geq p9549$   
For xxxx = 9576:  
- update the firmware on the Motor Module.  
- deselect function with value 0.  
For xxxx = 9578:  
- observe the information in r9790.  
For xxxx = 9585:  
Correct parameter (if required, also on the second monitoring channel, p9385).

## 4 Faults and alarms

### 4.2 List of faults and alarms

If xxxx = 9601:

yyyy = 1:

Only enable motion monitoring functions integrated in the drive (p9601.2 = 1) and extended functions without selection (p9601.5 = 1), or only enable PROFIsafe (p9601.3 = 1) or only onboard F-DI (p9601.4 = 1).

yyyy = 2, 3:

Enable motion monitoring functions integrated in the drive (p9601.2 = 1).

yyyy = 4:

If onboard F-DI are enabled, then it is not permissible to simultaneously set PROFIsafe and F-DI via PROFIsafe (p9501.30), deselect PROFIsafe functionality or onboard F-DI.

yyyy = 5:

To transfer the SLS limit values via PROFIsafe (p9501.24 = 1), also enable PROFIsafe (p9601.3 = 1) and motion monitoring functions integrated in the drive (p9601.2 = 1).

yyyy = 6:

For the safe position via PROFIsafe (p9501.25 = 1), also enable PROFIsafe (p9601.3 = 1) and the motion monitoring functions integrated in the drive (p9601.2 = 1).

yyyy = 7:

For safe switchover of gearbox stages (p9501.26 = 1) also enable PROFIsafe (p9601.3 = 1) and the motion monitoring functions integrated in the drive (p9601.2 = 1).

yyyy = 18:

For Safely-Limited Acceleration (p9501.20 = 1), also enable PROFIsafe (p9601.3 = 1) and the motion monitoring functions integrated in the drive (p9601.2 = 1).

yyyy = 21:

For Safe Stop 2 Extended Stop and Retract (p9501.4), also enable PROFIsafe (p9601.3 = 1) and motion monitoring functions integrated in the drive (p9601.2 = 1).

Note:

SCA: Safe Cam

SCSE: Single Channel Safety Encoder (single-channel encoder)

SS2E: Safe Stop 2 External (Safe Stop 2 with external stop, external STOP D)

SS2ESR: Safe Stop 2 Extended Stop and Retract

SLA: Safely-Limited Acceleration

SLA (p9501.20 = 1) is enabled with a 2-encoder system (p9526 not equal to 1).

xxxx = 9505:  
When SLP is active (p9501.1 = 1), the modulo function is activated and this is not permitted (p9505 not equal to 0).

xxxx = 9506 and yyyy = 1:  
Parameter p9506 is not equal to p9306.

xxxx = 9511 and yyyy = 1:  
Parameter p9511 is not equal to p9311.

xxxx = 9511 and yyyy = 2:  
On a Double Motor Module, between the drive objects, no different values in p9511 and p0115[0] is permitted.

xxxx = 9319:  
The fine resolution of the encoder for the second channel is too high.

xxxx = 9522:  
The gear stage was set too high.

xxxx = 9534 or 9535:  
The limit values of SLP have been set too high (absolute values).

xxxx = 9544:  
For linear axes, the maximum value is limited to 1 mm.

xxxx = 9547:  
The hysteresis tolerance is not permissible.

xxxx = 9573:  
"Referencing via Safety Control Channel" was requested (p9573 = 263), without enabling the function "Referencing via SCC" (p9501.27 = 0).

xxxx = 9576:  
The filtering for SLA has been enabled - however, the Motor Module used does not support this function.

xxxx = 9578:  
SLA is enabled (p9501.20 = 1). Acceleration limit is too low (p9578). The acceleration resolution is no longer sufficient (r9790).  
The minimum limit is x-times the acceleration resolution:  
- firmware version 5.1:  $3 * r9790[0]$   
- firmware version 5.2 and higher:  $10 * r9790[1]$

xxxx = 9585:  
For Safety without encoder and synchronous motor, p9585 must be set to 4.

xxxx = 9601 and yyyy = 1:  
If motion monitoring functions integrated in the drive (p9601.2 = 1) and extended functions without selection (p9601.5 = 1) are enabled, then PROFIsafe (p9601.3 = 1) or onboard F-DI (p9601.4 = 1) is not possible.

xxxx = 9601 and yyyy = 2:  
Extended functions without selection (p9601.5 = 1) are enabled without enabling motion monitoring functions integrated in the drive (p9601.2).

xxxx = 9601 and yyyy = 3:  
Onboard F-DI are enabled without enabling motion monitoring functions integrated in the drive (p9601.2).

## 4 Faults and alarms

### 4.2 List of faults and alarms

xxxx = 9601 and yyyy = 4:

Onboard F-DI are enabled. Then, it is not permissible to simultaneously set PROFIsafe and F-DI via PROFIsafe (p9501.30).

xxxx = 9601 and yyyy = 5:

Transfer of the SLS limit value via PROFIsafe (p9501.24) has been enabled, without enabling PROFIsafe.

xxxx = 9601 and yyyy = 6:

Transfer of the safe position via PROFIsafe (p9501.25) has been enabled, without enabling PROFIsafe.

xxxx = 9601 and yyyy = 7:

Safe switchover of the gearbox stages (p9501.26) has been enabled without enabling PROFIsafe.

xxxx = 9601 and yyyy = 11:

SS2E (p9501.18 = 1) is enabled without PROFIsafe being enabled.

xxxx = 9601 and yyyy = 12:

SCA (p9501.28 = 1) is enabled without enabling PROFIsafe.

xxxx = 9601 and yyyy = 18:

SLA (p9501.20 = 1) is enabled without enabling PROFIsafe.

xxxx = 9601 and yyyy = 21:

SS2ESR (p9501.4 = 1) is enabled without enabling PROFIsafe.

#### Remedy:

Correct parameter (if required, also on another monitoring channel, p9801).

If xxxx = 9500 and yyyy = 1:

- set p9500 "SI Motion monitoring clock cycle" as an integer multiple of p0115[0] "Current controller sampling time".

- align parameters 9300 and 9500, backup parameters (p0971 = 1) and carry out a POWER ON.

For xxxx = 9500 and yyyy = 16:

Inhibit "Synchronous safe position via PROFIsafe" function (p9501.29 = 0), or set monitoring clock cycle p9500 on all axes the same when the function is enabled.

If xxxx = 9501:

- correct parameters p9501.16 and p9301.16, or deselect the extended functions without selection (p9601.5).

If xxxx = 9501 and yyyy = 8:

Inhibit referencing via SCC (p9501.27) or enable an absolute motion monitoring function (p9501.1 or p9501.2).

If xxxx = 9501 and yyyy = 10:

Inhibit referencing via SCC (p9501.27) or EPOS (r0108.4).

For xxxx = 9501 and yyyy = 11:

Inhibit SS2E (p9501.18) - or enable PROFIsafe.

For xxxx = 9501 and yyyy = 12:

Inhibit SCA (p9501.28) - or enable PROFIsafe.

For xxxx = 9501 and yyyy = 14:

Inhibit "Synchronous safe position via PROFIsafe" function (p9501.29 = 0), or enable "Safe position via PROFIsafe" (p9501.25).

For xxxx = 9501 and yyyy = 17:

Inhibit "Synchronous safe position via PROFIsafe" function (p9501.29 = 0), or set "Safety with encoder" (p9506).

For xxxx = 9501 and yyyy = 19:

Inhibit SLA (p9501.20) or activate actual value sensing with encoder (p9506 equal to 0 or 2).

For xxxx = 9501 and yyyy = 20:

Inhibit SLA (p9501.20) or activate a 1-encoder system (p9526 equal to 1).

For xxxx = 9505:

Correct parameter p9501.1 or p9505.

For xxxx = 9507:

Set synchronous or induction/reluctance motor motor according to p0300.

For xxxx = 9506:

Align parameters p9306 and p9506, back up the parameters (p0971 = 1) and carry out a POWER ON.

For xxxx = 9511:

Align parameters p9311 and p9511, back up the parameters (p0971 = 1) and carry out a POWER ON.

For xxxx = 9517:

Parameter p9516.0 should also be checked.

For xxxx = 9319:

For the SCSE encoder, parameter p9319 must not be set higher than 11.

For xxxx = 9522:  
Correct the corresponding parameter.

For xxxx = 9534 or 9535:  
Reduce the limit values (absolute values) of SLP.

For xxxx = 9544:  
Correct parameter (for linear axes, the maximum value is limited to 1 mm).

For xxxx = 9547:  
With hysteresis/filtering enabled (p9501.16 = 1), the following applies:  
- set parameters p9546 and p9547 according to the following rule:  $p9547 \leq 0.75 \times p9546$   
- if the actual value synchronization is enabled (p9501.3 = 1), then this rule must be complied with:  $p9547 \geq p9549$

For xxxx = 9576:  
- update the firmware on the Motor Module  
- deselect function with value 0.

For xxxx = 9578:  
- observe the information in r9790.

For xxxx = 9585:  
Correct parameter (if required, also on the second monitoring channel, p9385).

If xxxx = 9601:  
yyyy = 1:  
Only enable motion monitoring functions integrated in the drive (p9601.2 = 1) and extended functions without selection (p9601.5 = 1), or only enable PROFIsafe (p9601.3 = 1) or only onboard F-DI (p9601.4 = 1).

yyyy = 2, 3:  
Enable motion monitoring functions integrated in the drive (p9601.2 = 1).

yyyy = 4:  
If onboard F-DI are enabled, then it is not permissible to simultaneously set PROFIsafe and F-DI via PROFIsafe (p9501.30), deselect PROFIsafe functionality or onboard F-DI.

yyyy = 5:  
To transfer the SLS limit values via PROFIsafe (p9501.24 = 1), also enable PROFIsafe (p9601.3 = 1) and motion monitoring functions integrated in the drive (p9601.2 = 1).

yyyy = 6:  
For the safe position via PROFIsafe (p9501.25 = 1), also enable PROFIsafe (p9601.3 = 1) and the motion monitoring functions integrated in the drive (p9601.2 = 1).

yyyy = 7:  
For safe switchover of gearbox stages (p9501.26 = 1) also enable PROFIsafe (p9601.3 = 1) and the motion monitoring functions integrated in the drive (p9601.2 = 1).

yyyy = 18:  
For Safely-Limited Acceleration (p9501.20 = 1), also enable PROFIsafe (p9601.3 = 1) and the motion monitoring functions integrated in the drive (p9601.2 = 1).

Note:  
SCA: Safe Cam  
SCSE: Single Channel Safety Encoder (single-channel encoder)  
SS2E: Safe Stop 2 External (Safe Stop 2 with external stop, external STOP D)  
SLA: Safely-Limited Acceleration

#### F01682

#### SI Motion P1 (CU): Monitoring function not supported

**Message value:**

%1

**Message class:**

Error in the parameterization / configuration / commissioning procedure (18)

**Drive object:**

SERVO, SERVO\_AC, SERVO\_I\_AC

**Component:**

None

**Propagation:**

GLOBAL

**Reaction:**

OFF2

**Acknowledge:**

IMMEDIATELY (POWER ON)

**Cause:**

The monitoring function enabled in p9501, p9601, p9801, p9307 or p9507 is not supported in this firmware version.

Note:

This fault results in a STOP A that cannot be acknowledged.

Fault value (r0949, interpret decimal):

1: Monitoring function SLP not supported (p9501.1).

2: Monitoring function SCA not supported (p9501.7 and p9501.8 ... 15 and p9503).

3: Monitoring function SLS override not supported (p9501.5).

4: Monitoring function external ESR activation not supported (p9501.4).

5: Monitoring function F-DI in PROFIsafe not supported (p9501.30).

6: Enable actual value synchronization not supported (p9501.3).

9: Monitoring function not supported by the firmware or enable bit not used.

10: Monitoring functions only supported for a SERVO drive object.

11: Encoderless monitoring functions (p9506.1) only supported for motion monitoring integrated in the drive (p9601.2).

12: Monitoring functions for ncSI are not supported for CU305.

14: Monitoring function SLA and ncSI not supported.

20: Motion monitoring functions integrated in the drive are only supported in conjunction with PROFIsafe (p9501, p9601.1 ... 2 and p9801.1 ... 2).

- 21: Enable a safe motion monitoring function (in p9501), not supported for enabled basic functions via PROFIsafe (p9601.2 = 0, p9601.3 = 1).
- 22: Encoderless monitoring functions in "chassis" format not supported.
- 23: CU240 does not support monitoring functions requiring an encoder.
- 24: Monitoring function SDI not supported (p9501.17).
- 25: Drive-integrated motion monitoring functions not supported (p9501, p9601.2).
- 26: Hysteresis and filtering for SSM monitoring function without an encoder not supported (p9501.16).
- 27: This hardware does not support onboard F-DI and F-DO.
- 28: Encoderless monitoring functions are not supported for synchronous motors (p9507.2).
- 29: SINAMICS S120M: Safety Extended Functions without encoder not supported.
- 31: This hardware does not support transfer SLS (SG) limit value via PROFIsafe (p9301/p9501.24).
- 33: Safety functions without selection not supported (p9601.5, p9801.5).
- 34: This module does not support safe position via PROFIsafe.
- 36: Function "SS1E" not supported.
- 37: Safe actual value sensing with HTL/TTL encoder (SMC30) not supported.
- 38: It is not permissible to simultaneously enable the safety functions (p9601) and the essential service mode (ESM, Essential Service Mode, p3880).
- 39: This module or software version of the CU/MM does not support safe gearbox stage switchover (p9501.26).
- 40: SIMOTION D410-2: Motion monitoring functions integrated in the drive or PROFIsafe control not supported.
- 41: SIMOTION D410-2: Safety functions not supported for the "Chassis" format.
- 42: Motion monitoring functions SLP and SP not supported for D4x5-2 and CX32-2 (p9501.1/25).
- 43: Motion monitoring functions SLP and SP as well as PROFIsafe telegrams 31/901/902 not supported for D410-2 (p9501.1/24/25/30, p9611).
- 44: This module/this software version does not support referencing via the Safety Control Channel (p9501.27).
- 45: Deactivating SOS/SLS during an external STOP A is not supported (p9501.23).
- 46: This firmware version does not support control of the basis functions via TM54F and the simultaneous enable of the extended functions or ncSI or PROFIsafe.
- 50: Shortening the switchover times for SOS (p9569/p9369, p9567/p9367) is not supported.
- 51: Safe actual value sensing with SCSE is not supported for dbSi (motion monitoring functions integrated in the drive, p9601.2 = 1).
- 52: "SBR with encoder" function is not supported (p9506 = 2).
- 53: SS2E function not supported (p9501.18).
- 54: SCA function not supported (p9501.28).
- 57: "Synchronous transfer safe position via PROFIsafe" function not supported (p9501.29).
- 58: "Safety limited acceleration" function (SLA) not supported (p9501.20).
- 59: Safe actual value sensing with SIL3 encoder not supported.
- 9586: The set value of p9586/p9386 is greater than the supported maximum value.
- 9588: The set value of p9588/p9388 is greater than the supported maximum value.
- 9589: The set value of p9589/p9389 is greater than the supported maximum value.
- 9612: An attempt was made to parameterize STOP B as stop response for PROFIsafe failure, although PROFIsafe is not enabled.

See also: p9612 (SI PROFIsafe failure response (Control Unit))

**Remedy:**

- deselect the monitoring function involved (p9501, p9503, p9506, p9601, p9801, p9307, p9507).
- reduce the set value (p9586, p9588, p9589).
- increase the set value (p9578).

For fault value = 59:

- upgrade the firmware of the Motor Module to a later version.

For fault value = 9612:

- establish communications with PROFIsafe (p9601).
- parameterize STOP A as the stop response for PROFIsafe failure (p9612 = 0).

## 4 Faults and alarms

### 4.2 List of faults and alarms

Note:

ESR: Extended Stop and Retract

SBR: Safe Brake Ramp (safe brake ramp monitoring)

SCA: Safe Cam / SN: Safe software cam

SCSE: Single Channel Safety Encoder (single-channel encoder)

SDI: Safe Direction (safe motion direction)

SLA: Safely-Limited Acceleration

#### F01682

#### SI Motion P1 (CU): Monitoring function not supported

**Message value:** %1

**Message class:** Error in the parameterization / configuration / commissioning procedure (18)

**Drive object:** VECTOR, VECTOR\_AC, VECTOR\_I\_AC

**Component:** None

**Propagation:** GLOBAL

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:** The monitoring function enabled in p9501, p9601, p9801, p9307 or p9507 is not supported in this firmware version.

Note:

This fault results in a STOP A that cannot be acknowledged.

Fault value (r0949, interpret decimal):

1: Monitoring function SLP not supported (p9501.1).

2: Monitoring function SCA not supported (p9501.7 and p9501.8 ... 15 and p9503).

3: Monitoring function SLS override not supported (p9501.5).

4: Monitoring function external STOP E not supported (p9501.4).

5: Monitoring function F-DI in PROFIsafe not supported (p9501.30).

6: Enable actual value synchronization not supported (p9501.3).

9: Monitoring function not supported by the firmware or enable bit not used.

10: Monitoring functions only supported for a SERVO drive object.

11: Encoderless monitoring functions (p9506.1) only supported for motion monitoring integrated in the drive (p9601.2).

12: Monitoring functions for ncSI are not supported for CU305.

14: Monitoring function SLA and ncSI not supported.

20: Motion monitoring functions integrated in the drive are only supported in conjunction with PROFIsafe (p9501, p9601.1 ... 2 and p9801.1 ... 2).

21: Enable a safe motion monitoring function (in p9501), not supported for enabled basic functions via PROFIsafe (p9601.2 = 0, p9601.3 = 1).

22: Encoderless monitoring functions in "chassis" format not supported.

23: CU240 does not support monitoring functions requiring an encoder.

24: Monitoring function SDI not supported (p9501.17).

25: Drive-integrated motion monitoring functions not supported (p9501, p9601.2).

26: Hysteresis and filtering for SSM monitoring function without an encoder not supported (p9501.16).

27: This hardware does not support onboard F-DI and F-DO.

28: Encoderless monitoring functions are not supported for synchronous motors (p9507.2).

29: SINAMICS S120M: Safety Extended Functions without encoder not supported.

31: This hardware does not support transfer SLS (SG) limit value via PROFIsafe (p9301/p9501.24).

33: Safety functions without selection not supported (p9601.5, p9801.5).

34: This module does not support safe position via PROFIsafe.

36: Function "SS1E" not supported.

- 37: Safe actual value sensing with HTL/TTL encoder (SMC30) not supported.
- 38: It is not permissible to simultaneously enable the safety functions (p9601) and the essential service mode (ESM, Essential Service Mode, p3880).
- 39: This module or software version of the CU/MM does not support safe gearbox stage switchover (p9501.26).
- 40: SIMOTION D410-2: Motion monitoring functions integrated in the drive or PROFIsafe control not supported.
- 41: SIMOTION D410-2: Safety functions not supported for the "Chassis" format.
- 42: Motion monitoring functions SLP and SP not supported for D4x5-2 and CX32-2 (p9501.1/25).
- 43: Motion monitoring functions SLP and SP as well as PROFIsafe telegrams 31/901/902 not supported for D410-2 (p9501.1/24/25/30, p9611).
- 44: This module/this software version does not support referencing via the Safety Control Channel (p9501.27).
- 45: Deactivating SOS/SLS during an external STOP A is not supported (p9501.23).
- 46: This firmware version does not support control of the basis functions via TM54F and the simultaneous enable of the extended functions or ncSI or PROFIsafe.
- 50: Shortening the switchover times for SOS (p9569/p9369, p9567/p9367) is not supported.
- 51: Safe actual value sensing with SCSE is not supported for dbSi (motion monitoring functions integrated in the drive, p9601.2 = 1).
- 52: "SBR with encoder" function is not supported (p9506 = 2).
- 53: SS2E function not supported (p9501.18).
- 54: SCA function not supported (p9501.28).
- 57: "Synchronous transfer safe position via PROFIsafe" function not supported (p9501.29).
- 58: "Safety limited acceleration" function (SLA) not supported (p9501.20).
- 9586: The set value of p9586/p9386 is greater than the supported maximum value.
- 9588: The set value of p9588/p9388 is greater than the supported maximum value.
- 9589: The set value of p9589/p9389 is greater than the supported maximum value.
- 9612: An attempt was made to parameterize STOP B as stop response for PROFIsafe failure, although PROFIsafe is not enabled.

See also: p9612 (SI PROFIsafe failure response (Control Unit))

**Remedy:**

- deselect the monitoring function involved (p9501, p9503, p9506, p9601, p9801, p9307, p9507).
- reduce the set value (p9586, p9588, p9589).
- increase the set value (p9578).

For fault value = 9612:

- establish communications with PROFIsafe (p9601).
- parameterize STOP A as the stop response for PROFIsafe failure (p9612 = 0).

Note:

- SBR: Safe Brake Ramp (safe brake ramp monitoring)
  - SCA: Safe Cam / SN: Safe software cam
  - SCSE: Single Channel Safety Encoder (single-channel encoder)
  - SDI: Safe Direction (safe motion direction)
  - SLA: Safely-Limited Acceleration
  - SI: Safety Integrated
  - SLP: Safely-Limited Position / SE: Safe software limit switches
  - SLS: Safely-Limited Speed / SG: Safely reduced speed
  - SOS: Safe Operating Stop / SBH: Safe operating stop
  - SP: Safe Position
  - SPL: Safe programmable logic
  - SS1E: Safe Stop 1 External (Safe Stop 1 with external stop)
  - SS2E: Safe Stop 2 External (Safe Stop 2 with external stop, external STOP D)

## 4 Faults and alarms

### 4.2 List of faults and alarms

**Cause:** There is not sufficient memory space in the NVRAM on the drive to save parameters r9781 and r9782 (safety logbook).

**Note:**

This fault does not result in a safety stop response.

Fault value (r0949, interpret decimal):

0: There is no physical NVRAM available in the drive.

1: There is no longer any free memory space in the NVRAM.

**Remedy:**

For fault value = 0:

- use a Control Unit NVRAM.

For fault value = 1:

- deselect functions that are not required and that take up memory space in the NVRAM.

- contact Technical Support.

**Note:**

NVRAM: Non-Volatile Random Access Memory (non-volatile read and write memory)

---

#### A01691 (F)

#### SI Motion: Ti and To unsuitable for DP cycle

**Message value:** -

**Message class:** Error in the parameterization / configuration / commissioning procedure (18)

**Drive object:** HLA, SERVO, SERVO\_AC, SERVO\_I\_AC, VECTOR, VECTOR\_AC, VECTOR\_I\_AC

**Component:** None

**Propagation:** GLOBAL

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:**

The configured times for PROFIBUS communication are not permitted and the DP cycle is used as the actual value acquisition cycle for the safe movement monitoring functions.

Isochronous PROFIBUS:

The sum of Ti and To is too high for the selected DP cycle. The DP cycle should be at least 1 current controller cycle greater than the sum of Ti and To.

No isochronous PROFIBUS:

The DP clock cycle must be at least 4x the current controller clock cycle.

**Notice:**

If this alarm is not observed, then message C01711 or C30711 – with the value 1020 ... 1021 – can sporadically occur.

**Remedy:**

Configure Ti and To low so that they are suitable for the DP cycle or increase the DP cycle time.

Alternative when SI monitoring integrated in the drive is enabled (p9601/p9801 > 0):

Use the actual value acquisition cycle p9511/p9311 and, in turn, set independently from DP cycle. The actual values sensing clock cycle must be at least 4x the current controller clock cycle. A clock cycle ratio of at least 8:1 is recommended.

See also: p9511 (SI Motion actual value sensing cycle clock (Control Unit))

Reaction upon F: NONE (OFF1, OFF2, OFF3)

Acknowl. upon F: IMMEDIATELY (POWER ON)

---

#### F01692

#### SI Motion P1 (CU): Parameter value not permitted for encoderless

**Message value:** Parameter: %1

**Message class:** Error in the parameterization / configuration / commissioning procedure (18)

**Drive object:** SERVO, SERVO\_AC, SERVO\_I\_AC, VECTOR, VECTOR\_AC, VECTOR\_I\_AC

**Component:** None

**Propagation:** GLOBAL

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:**

The parameter cannot be set to this value if encoderless motion monitoring functions have been selected in p9506.

**Note:**

This fault does not result in a safety stop response.

Fault value (r0949, interpret decimal):

Parameter number with the incorrect value.

See also: p9501 (SI Motion enable safety functions (Control Unit))

**Remedy:**

- correct the parameter specified in the fault value.
- if necessary, deselect encoderless motion monitoring functions (p9506).

See also: p9501 (SI Motion enable safety functions (Control Unit))

---

**A01693 (F) SI P1 (CU): Safety parameter setting changed, warm restart/POWER ON required**

**Message value:** %1  
**Message class:** Error in the parameterization / configuration / commissioning procedure (18)  
**Drive object:** A\_INF, B\_INF, HLA, R\_INF, S\_INF, SERVO, SERVO\_AC, SERVO\_I\_AC, TM41, TM54F\_MA, TM54F\_SL, VECTOR, VECTOR\_AC, VECTOR\_I\_AC  
**Component:** None **Propagation:** GLOBAL  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** Safety parameters have been changed; these will only take effect following a warm restart or POWER ON.  
 Alarm value (r2124, interpret decimal):  
 Parameter number of the safety parameter which has changed, necessitating a warm restart or POWER ON.

**Remedy:**

- carry out a warm restart (p0009 = 30, p0976 = 2, 3).
- carry out a POWER ON (switch-off/switch-on) for all components.

Note:

Before performing an acceptance test, a POWER ON must be carried out for all components.

Reaction upon F:  
 Infeed: NONE (OFF1, OFF2)  
 Servo: NONE (OFF1, OFF2, OFF3)  
 Vector: NONE (OFF1, OFF2, OFF3)  
 Hla: NONE (OFF1, OFF2, OFF3)

Acknowl. upon F: POWER ON

---

**F01694 (A) SI Motion CU: Firmware version Motor Module/Hydraulic Module older Control Unit**

**Message value:** -  
**Message class:** Error in the parameterization / configuration / commissioning procedure (18)  
**Drive object:** HLA, SERVO, SERVO\_AC, SERVO\_I\_AC, VECTOR, VECTOR\_AC, VECTOR\_I\_AC  
**Component:** None **Propagation:** GLOBAL  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY (POWER ON)  
**Cause:** The firmware version of the Motor Module/Hydraulic Module is older than the version of the Control Unit.  
 It is possible that safety functions are not available (r9771/r9871).  
 Note:  
 This message does not result in a safety stop response.  
 This message can also occur, if after an automatic firmware update, a POWER ON was not carried out (Alarm A01007).

**Remedy:** Upgrade the firmware of the Motor Module/Hydraulic Module to a later version.  
 See also: r9390 (SI Motion version safety motion monitoring (Motor Module)), r9590 (SI Motion version safety motion monitoring (Control Unit))

Reaction upon A: NONE

Acknowl. upon A: NONE

---

**A01695 (F) SI Motion: Sensor Module was replaced**

**Message value:** %1  
**Message class:** Error in the parameterization / configuration / commissioning procedure (18)  
**Drive object:** HLA, SERVO, SERVO\_AC, SERVO\_I\_AC, VECTOR, VECTOR\_AC, VECTOR\_I\_AC  
**Component:** None **Propagation:** GLOBAL  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** A Sensor Module, which is used for safe motion monitoring functions, was replaced. The hardware replacement must be acknowledged. An acceptance test must be subsequently performed.  
 Note:  
 This message does not result in a safety stop response.

**Remedy:**

Carry out the following steps using the STARTER commissioning tool:

- press the "Acknowledge hardware replacement" button in the safety screen form.
- execute the function "Copy RAM to ROM".
- carry out a POWER ON (switch-off/switch-on) for all components.

As an alternative, carry out the following steps in the expert list of the commissioning tool:

- start the copy function for the node identifier on the drive (p9700 = 1D hex).
- acknowledge the hardware CRC on the drive (p9701 = EC hex).
- save all parameters (p0977 = 1).
- carry out a POWER ON (switch-off/switch-on) for all components.

Then carry out an acceptance test (refer to the Safety Integrated Function Manual).

For SINUMERIK, the following applies:

HMI supports the replacement of components with Safety functions (operating area "Diagnostics" --> Softkey "Alarm list" --> Softkey "Confirm SI HW" etc.).

The precise procedure is given in the following document:

SINUMERIK Function Manual Safety Integrated

See also: p9700 (SI Motion copy function), p9701 (Acknowledge SI motion data change)

Reaction upon F: NONE (OFF1, OFF2, OFF3)

Acknowl. upon F: IMMEDIATELY (POWER ON)

---

**A01696 (F)****SI Motion: Test stop for the motion monitoring functions selected when booting**

**Message value:** -

**Message class:** Safety monitoring channel has identified an error (10)

**Drive object:** HLA, SERVO, SERVO\_AC, SERVO\_I\_AC, VECTOR, VECTOR\_AC, VECTOR\_I\_AC

**Component:** None **Propagation:** GLOBAL

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** The forced checking procedure (test stop) for the safe motion monitoring functions is already selected when booting, which is not permissible.

This is the reason that the test is only carried out again after first selecting the forced checking procedure.

Note:

This message does not result in a safety stop response.

See also: p9705 (SI Motion test stop signal source)

**Remedy:**

Deselect the forced checking procedure for the safe motion monitoring functions and then select again.

Notice:

It is not permissible to use TM54F inputs to select the test stop.

Note:

The signal source to select the forced checking procedure is set via binector input p9705.

SI: Safety Integrated

Reaction upon F: NONE (OFF1, OFF2, OFF3)

Acknowl. upon F: IMMEDIATELY (POWER ON)

---

**A01697 (F)****SI Motion: Test stop for motion monitoring functions required**

**Message value:** -

**Message class:** Safety monitoring channel has identified an error (10)

**Drive object:** HLA, SERVO, SERVO\_AC, SERVO\_I\_AC, VECTOR, VECTOR\_AC, VECTOR\_I\_AC

**Component:** None **Propagation:** GLOBAL

**Reaction:** NONE

**Acknowledge:** NONE

## 4 Faults and alarms

### 4.2 List of faults and alarms

**Remedy:** Check the braking behavior and, if necessary, adapt the parameterization of the parameter settings of the "SAM" or the "SBR" function.  
This message can be acknowledged without a POWER ON as follows (safe acknowledgment):

- Terminal Module 54F (TM54F).
- onboard F-DI (only CU310-2).
- PROFIsafe.
- machine control panel.

**Note:**  
SAM: Safe Acceleration Monitor (safe acceleration monitoring)  
SBR: Safe Brake Ramp (safe ramp monitoring)  
SI: Safety Integrated  
See also: p9548, p9581, p9582, p9583

---

#### **C01706 SI Motion P1 (CU): SAM/SBR limit exceeded**

**Message value:** -  
**Message class:** Safety monitoring channel has identified an error (10)  
**Drive object:** HLA  
**Component:** None **Propagation:** GLOBAL  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY (POWER ON)  
**Cause:** Motion monitoring functions with encoder (p9506 = 0):  
- after initiating STOP B (SS1) or STOP C (SS2), the speed has exceeded the selected tolerance.  
The drive is shut down by the message C01700 "SI Motion: STOP A initiated".

**Remedy:** Check the braking behavior and, if necessary, adapt the parameterization of the parameter settings of the "SAM" or the "SBR" function.  
This message can be acknowledged without a POWER ON as follows (safe acknowledgment):

- Terminal Module 54F (TM54F).
- onboard F-DI (only CU310-2).
- PROFIsafe.
- machine control panel.

**Note:**  
SAM: Safe Acceleration Monitor (safe acceleration monitoring)  
SBR: Safe Brake Ramp (safe ramp monitoring)  
SI: Safety Integrated

---

#### **C01707 SI Motion P1 (CU): Tolerance for safe operating stop exceeded**

**Message value:** -  
**Message class:** Safety monitoring channel has identified an error (10)  
**Drive object:** HLA, SERVO, SERVO\_AC, SERVO\_I\_AC, VECTOR, VECTOR\_AC, VECTOR\_I\_AC  
**Component:** None **Propagation:** GLOBAL  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY (POWER ON)  
**Cause:** The actual position has distanced itself further from the target position than the standstill tolerance.  
The drive is shut down by the message C01701 "SI Motion: STOP B initiated".

**Remedy:**

- check whether safety faults are present and if required carry out the appropriate diagnostic routines for the particular faults.
- check whether the standstill tolerance matches the accuracy and control dynamic performance of the axis.
- carry out a POWER ON.

This message can be acknowledged without a POWER ON as follows (safe acknowledgment):

- Terminal Module 54F (TM54F).
- onboard F-DI (only CU310-2).
- PROFIsafe.
- machine control panel.

Note:

SI: Safety Integrated  
SOS: Safe Operating Stop / SBH: Safe operating stop  
See also: p9530 (SI Motion standstill tolerance (Control Unit))

---

**C01708 SI Motion P1 (CU): STOP C initiated**

**Message value:** -

**Message class:** Safety monitoring channel has identified an error (10)

**Drive object:** HLA, SERVO, SERVO\_AC, SERVO\_I\_AC, VECTOR, VECTOR\_AC, VECTOR\_I\_AC

**Component:** None **Propagation:** GLOBAL

**Reaction:** STOP2

**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:** The drive is stopped via a STOP C (braking along the OFF3 deceleration ramp).  
"Safe Operating Stop" (SOS) is activated after the parameterized time has expired.  
Possible causes:

- stop request from the higher-level control.
- subsequent response to the message C01714 "SI Motion CU: Safely-Limited Speed exceeded".
- subsequent response to the message C01715 "SI Motion CU: Safely-Limited Position exceeded".
- subsequent response to the message C01716 "SI Motion CU: tolerance for safe motion direction exceeded".

See also: p9552 (SI Motion transition time STOP C to SOS (SBH) (Control Unit))

**Remedy:**

- remove the cause of the fault at the control.
- carry out a diagnostics routine for message C01714/C01715/C01716.

This message can be acknowledged without a POWER ON as follows (safe acknowledgment):

- Terminal Module 54F (TM54F).
- onboard F-DI (only CU310-2).
- PROFIsafe.
- machine control panel.

Note:

SI: Safety Integrated  
SOS: Safe Operating Stop / SBH: Safe operating stop

---

**C01709 SI Motion P1 (CU): STOP D initiated**

**Message value:** -

**Message class:** Safety monitoring channel has identified an error (10)

**Drive object:** HLA, SERVO, SERVO\_AC, SERVO\_I\_AC, VECTOR, VECTOR\_AC, VECTOR\_I\_AC

**Component:** None **Propagation:** GLOBAL

**Reaction:** NONE

**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:** The drive is stopped via a STOP D (braking along the path).  
"Safe Operating Stop" (SOS) is activated after the parameterized time has expired.  
Possible causes:

- stop request from the higher-level control.
- subsequent response to the message C01714 "SI Motion CU: Safely-Limited Speed exceeded".
- subsequent response to the message C01715 "SI Motion CU: Safely-Limited Position exceeded".
- subsequent response to the message C01716 "SI Motion CU: tolerance for safe motion direction exceeded".

See also: p9553 (SI Motion transition time STOP D to SOS (SBH) (Control Unit))

## 4 Faults and alarms

### 4.2 List of faults and alarms

**Remedy:**

- remove the cause of the fault at the control.
- carry out a diagnostics routine for message C01714/C01715/C01716.

This message can be acknowledged without a POWER ON as follows (safe acknowledgment):

- Terminal Module 54F (TM54F).
- onboard F-DI (only CU310-2).
- PROFIsafe.
- machine control panel.

Note:

SI: Safety Integrated  
SOS: Safe Operating Stop / SBH: Safe operating stop

---

#### C01710

#### SI Motion P1 (CU): STOP E initiated

**Message value:** -

**Message class:** Safety monitoring channel has identified an error (10)

**Drive object:** HLA, SERVO, SERVO\_AC, SERVO\_I\_AC, VECTOR, VECTOR\_AC, VECTOR\_I\_AC

**Component:** None **Propagation:** GLOBAL

**Reaction:** NONE

**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:** The drive is stopped via a STOP E (retraction motion).  
"Safe Operating Stop" (SOS) is activated after the parameterized time has expired.  
Possible causes:

- stop request from the higher-level control.
- subsequent response to the message C01714 "SI Motion CU: Safely-Limited Speed exceeded".
- subsequent response to the message C01715 "SI Motion CU: Safely-Limited Position exceeded".
- subsequent response to the message C01716 "SI Motion CU: tolerance for safe motion direction exceeded".

See also: p9554 (SI Motion transition time STOP E to SOS (SBH) (Control Unit))

**Remedy:**

- remove the cause of the fault at the control.
- carry out a diagnostics routine for message C01714/C01715/C01716.

This message can be acknowledged without a POWER ON as follows (safe acknowledgment):

- Terminal Module 54F (TM54F).
- onboard F-DI (only CU310-2).
- PROFIsafe.
- machine control panel.

Note:

SI: Safety Integrated  
SOS: Safe Operating Stop / SBH: Safe operating stop

---

#### C01711

#### SI Motion P1 (CU): Defect in a monitoring channel

**Message value:** %1

**Message class:** Safety monitoring channel has identified an error (10)

**Drive object:** SERVO, SERVO\_AC, SERVO\_I\_AC, VECTOR, VECTOR\_AC, VECTOR\_I\_AC

**Component:** None **Propagation:** GLOBAL

**Reaction:** NONE

**Acknowledge:** IMMEDIATELY (POWER ON)

- Cause:** When cross-comparing the two monitoring channels, the drive detected a difference between the input data or results of the monitoring functions and initiated a STOP F. One of the monitoring functions no longer reliably functions - i.e. safe operation is no longer possible.
- If at least one monitoring function is active, then after the parameterized timer has expired, the message C01701 "SI Motion: STOP B initiated" is output.
- The message value that resulted in a STOP F is displayed in r9725.
- If the drive is operated together with a SINUMERIK, the message values are described in message 27001 of SINUMERIK, with the exception of the following message values, which can only occur in SINAMICS:
- 1007: communication error with the PLC (sign-of-life).
  - 1008: communication error with the PLC (CRC).
- The following described message values involve the data cross-check between the two monitoring channels (safety functions integrated in the drive).
- The message values may also occur in the following cases if the cause that is explicitly mentioned does not apply:
- cycle times not uniformly parameterized (p9500/p9300 and p9511/p9311)
  - differently parameterized axis types (p9502/p9302).
  - excessively fast cycle times (p9500/p9300, p9511/p9311).
  - For message values 3, 44 ... 57, 232 and 1-encoder system, differently set encoder parameters.
  - For message values 3, 44 ... 57, 232 and 2-encoder system, encoder parameters that have not been correctly set.
  - incorrect synchronization.
- Message value (r9749, interpret decimal):
- 0 to 999: Number of the cross-compared data that resulted in this fault.
- Message values that are not subsequently listed are only for internal Siemens troubleshooting.
- 0: Stop request from another monitoring channel.
- 1: Status image of monitoring functions SOS, SLS, SAM/SBR, SDI, SLA or SLP (result list 1) (r9710[0], r9710[1]).
  - 2: Status image of monitoring function SCA or n < nx (result list 2) (r9711[0], r9711[1]).
  - 3: The position actual value differential (r9713[0/1]) between the two monitoring channels is greater than the tolerance in p9542/p9342. When actual value synchronization is enabled (p9501.3/p9301.3), the velocity differential (based on the position actual value) is greater than the tolerance in p9549/p9349.
  - 4: Error when synchronizing the data cross-check between the two channels.
  - 5: Enable safe functions (p9501/p9301). Safety monitoring clock cycle too small (p9500/p9300).
  - 6: Limit value for SLS1 (p9531[0]/p9331[0])
  - 7: Limit value for SLS2 (p9531[1]/p9331[1])
  - 8: Limit value for SLS3 (p9531[2]/p9331[2])
  - 9: Limit value for SLS4 (p9531[3]/p9331[3])
  - 10: Standstill tol. (p9530/p9330)
  - 11: Upper limit value for SLP1 (p9534[0]/p9334[0]).
  - 12: Lower limit value for SLP1 (p9535[0]/p9335[0]).
  - 13: Upper limit value for SLP2 (p9534[1]/p9334[1]).
  - 14: Lower limit value for SLP2 (p9535[1]/p9335[1]).
  - 15: Upper limit value for SCA, cam 1 plus position (p9536[0]/p9336[0]+p9540/p9340)
  - 16: Lower limit value for SCA, cam 1 plus position (p9536[0]/p9336[0])
  - 17: Upper limit value for SCA, cam 1 minus position (p9537[0]/p9337[0]+p9540/p9340)
  - 18: Lower limit for SCA, cam 1 minus position (p9537[0]/p9337[0])
  - 19...30: limit value SCA, cams 2 to 4. Refer above fault values 15 to 18 for cam 1
  - 31: Position tolerance (p9542/p9342) or (p9549/p9349) when actual value synchronization is enabled (p9501.3/p9301.3)
  - 32: Position tolerance for safe referencing (p9544/p9344).
  - 33: Time, velocity changeover (p9551/p9351)
  - 35: Delay time, STOP A (p9556/p9356)
  - 36: Checking time, STO (p9557/p9357)
  - 37: Trans. time, STOP C to SOS (p9552/p9352)
  - 38: Trans. time STOP D to SOS (p9553/p9353)
  - 39: Trans. time, STOP E to SOS (p9554/p9354)
  - 40: Stop response for SLS (p9561/p9361).
  - 41: Stop response for SLP1 (p9562[0]/p9362[0]).
  - 42: Shutdown speed, STO (p9560/p9360)

43: Memory test stop response (STOP A).

44 ... 57: General

Possible cause 1 (during commissioning or parameter modification)

The tolerance value for the monitoring function is not the same on the two monitoring channels.

Possible cause 2 (during active operation)

The limit values are based on the actual value (r9713[0/1]). If the safe actual values on the two monitoring channels do not match, the limit values, which have been set at a defined interval, will also be different (i.e. corresponding to message value 3). This can be ascertained by checking the safe actual positions.

Permissible deviation between the two monitoring channels: p9542/p9342.

44: Position actual value (r9713[0/1]) + limit value SLS1 (p9531[0]/p9331[0]) \* safety monitoring clock cycle (p9500/p9300).

45: Position actual value (r9713[0/1]) - limit value SLS1 (p9531[0]/p9331[0]) \* safety monitoring clock cycle (p9500/p9300).

46: Position actual value (r9713[0/1]) + limit value SLS2 (p9531[1]/p9331[1]) \* safety monitoring clock cycle (p9500/p9300).

47: Position actual value (r9713[0/1]) - limit value SLS2 (p9531[1]/p9331[1]) \* safety monitoring clock cycle (p9500/p9300).

48: Position actual value (r9713[0/1]) + limit value SLS3 (p9531[2]/p9331[2]) \* safety monitoring clock cycle (p9500/p9300).

49: Position actual value (r9713[0/1]) - limit value SLS3 (p9531[2]/p9331[2]) \* safety monitoring clock cycle (p9500/p9300).

50: Position actual value (r9713[0/1]) + limit value SLS4 (p9531[3]/p9331[3]) \* safety monitoring clock cycle (p9500/p9300).

51: Position actual value (r9713[0/1]) - limit value SLS4 (p9531[3]/p9331[3]) \* safety monitoring clock cycle (p9500/p9300).

52: Standstill position + tolerance (p9530/9330)

53: Standstill position - tolerance (p9530/9330)

54: Position actual value (r9713[0/1]) + limit value nx (p9546/p9346) \* safety monitoring clock cycle (p9500/p9300) + tolerance (p9542/p9342).

55: Position actual value (r9713[0/1]) + limit value nx (p9546/p9346) \* safety monitoring clock cycle (p9500/p9300).

56: Position actual value (r9713[0/1]) - limit value nx (p9546/p9346) \* safety monitoring clock cycle (p9500/p9300).

57: Position actual value (r9713[0/1]) - limit value nx (p9546/p9346) \* safety monitoring clock cycle (p9500/p9300) - tolerance (p9542/p9342).

58: Actual stop request.

75: Velocity limit nx (p9546, p9346).

When the function "n < nx: hysteresis and filtering" (p9501.16 = 1) is enabled, this message value is also output for a different hysteresis tolerance (p9547/p9347).

76: Stop response for SLS1 (p9563[0]/p9363[0]).

77: Stop response for SLS2 (p9563[1]/p9363[1]).

78: Stop response for SLS3 (p9563[2]/p9363[2]).

79: Stop response for SLS4 (p9563[3]/p9363[3]).

80: Modulo value for SP for rotary axes (p9505/p9305).

81: Velocity tolerance for SAM (p9548/p9348)

82: SGEs for SLS correction factor.

83: Acceptance test timer (p9558/p9358)

84: Trans. time STOP F (p9555/p9355)

85: Trans. time bus failure (p9580/p9380)

86: ID 1-encoder system (p9526/p9326).

87: Encoder assignment, second channel (p9526/p9326)

88: SCA (SN) enable (p9503/p9303).

89: Encoder limit freq.

90: Upper limit value for SCA, cam 5 plus position (p9536[4]/p9336[4]+p9540/p9340).

91: Lower limit value for SCA, cam 5 plus position (p9536[4]/p9336[4]).

92: Upper limit value for SCA, cam 5 minus position (p9537[4]/p9337[4]+p9540/p9340).

93: Lower limit for SCA, cam 5 minus position (p9537[4]/p9337[4]).

94...224: limit value SCA, cams 6 to 30. See above, fault values 90 to 93 for cam 5.

225...229: Status screens of the monitoring function SCA (result lists 3...7).

- 230: Filter time constant for  $n < n_x$ .
- 231: Hysteresis tolerance for  $n < n_x$ .
- 232: Smoothed velocity actual value.
- 233: Limit value  $n_x$  / safety monitoring clock cycle + hysteresis tolerance.
- 234: Limit value  $n_x$  / Safety monitoring clock cycle.
- 235: -Limit value  $n_x$  / Safety monitoring clock cycle.
- 236: -Limit value  $n_x$  / safety monitoring clock cycle - hysteresis tolerance.
- 237: SGA  $n < n_x$ .
- 238: speed limit value for SAM (p9568/p9368 or p9346/p9346).
- 239: Acceleration for SBR (p9581/p9381 and p9583/p9383).
- 240: Inverse value of acceleration for SBR (p9581/p9381 and p9583/p9383).
- 241: Deceleration time for SBR (p9582/p9382).
- 242: Function specification (p9506/p9306).
- 243: Function configuration (p9507/p9307).
- 244: Encoderless actual value sensing filter time (p9587/p9387).
- 245: Encoderless actual value sensing minimum current (p9588/p9388).
- 246: Voltage tolerance acceleration (p9589/p9389).
- 247: SDI tolerance (p9564/p9364).
- 248: SDI positive upper limit (7FFFFFFF hex).
- 249: Position actual value (r9713[0/1]) - SDI tolerance (p9564/p9364).
- 250: Position actual value (r9713[0/1]) + SDI tolerance (p9564/p9364).
- 251: SDI negative lower limit (80000001 hex).
- 252: SDI stop response (p9566/p9366).
- 253: SDI delay time (p9565/p9365).
- 254: Setting the evaluation delay for actual value sensing after pulse enable (p9586/p9386).
- 255: Setting, behavior during pulse suppression (p9509/p9309).
- 256: Status image of monitoring functions SOS, SLS, SLP, test stop, SBR, SDI (result list 1 ext) (r9710).
- 257: Safety functions for motion monitoring functions without selection (p9512/p9312) different.
- 258: Fault tolerance, actual value sensing encoderless (p9585/p9385).
- 259: Scaling factor for safe position via PROFIsafe (p9574/p9374) or PROFIsafe telegram (p9611/p9811) different.
- 260: Modulo value including scaling (p9505/p9305 and p9574/p9374) for SP with 16 bit.
- 261: Scaling factor for acceleration for SBR different.
- 262: Scaling factor for the inverse value of the acceleration for SBR different.
- 263: Stop response for SLP2 (p9562[1]/p9362[1])
- 264: Position tolerance including scaling (p9542/p9342 and p9574/p9374) for SP with 16 bit.
- 265: Status image of all change functions (results list 1) (r9710).
- 266: The switchover speed to SOS differs (p9567/p9367).
- 267: The transition time to SOS after standstill differs (p9569/p9369).
- 268: SLP delay time differs (p9577/p9377).
- 269: Factor to increase the position tolerance when switching over the gearbox stage (p9543/9343).
- 270: Screen form for SGE image: all functions, which are not supported/enabled for the actual parameterization (p9501/p9301, p9601/p9801 and p9506/p9306)..
- 271: Screen form for SGE image: Deselect all bits for the "Safe gearbox switchover" function.
- 272: activation of the increased position tolerance for the "Safe gearbox switchover" function different (p9568/p9368 or p9346/p9346 or "0").
- 273: speed limit value for flattening the ramp for SAM/SBR different.
- 274: SGA SCA, cams 1 to 15.
- 275: SGA SCA, cams 16 to 30.
- 276: Limit value for SLA1 (p9578/p9378).
- 277: Stop response for SLA1 (p9579/p9379).
- 278: Upper limit value for SLA1.
- 279: Lower limit value for SLA1.
- 280: Upper limit value for SLA1 (fine resolution).
- 281: Lower limit value for SLA1 (fine resolution).
- 282: SLA filter time.

## 4 Faults and alarms

### 4.2 List of faults and alarms

283: Acceleration actual value (fine resolution).

1000: Watchdog timer has expired. Too many signal changes have occurred at safety-relevant inputs.

1001: Initialization error of watchdog timer.

1002:

User agreement after the timer has expired different.

The user agreement is not consistent. After a time of 4 s has expired, the status of the user agreement is different in both monitoring channels.

1003:

Reference tolerance exceeded.

When the user agreement is set, the difference between the new reference point that has been determined after the system boots (absolute encoder) or reference point approach (distance-coded or incremental measuring system) and the safe actual position (saved value + traversing distance) is greater than the reference tolerance (p9544). In this case, the user agreement is withdrawn.

1004:

Plausibility error for user agreement.

1. If the user agreement has already been set, then the setting is initiated again. In this case, the user agreement is withdrawn.

2. The user agreement was set, although the axis has still not been referenced.

1005:

- for safe motion monitoring functions without encoder: pulses already suppressed for test stop selection.

- for safe motion monitoring functions with encoder: STO already active for test stop selection.

1011: Acceptance test status between the monitoring channels differ.

1012: Plausibility violation of the encoder actual value.

1014: Error when synchronizing the SGA for the "Safe cam" function.

1015: Gearbox switchover (bit 27 in PROFIsafe telegram) takes longer than 2 min.

1020: Cyc. communication failure between the monit. channels.

1021: Cyc. communication failure between the monit. channel and Sensor Module.

1022: Sign-of-life error for DRIVE-CLiQ encoders monitoring channel 1.

1023: Error in the effectiveness test in the DRIVE-CLiQ encoder

1024: Sign-of-life error for HTL/TTL encoders.

1032: Sign-of-life error for DRIVE-CLiQ encoders monitoring channel 2.

1033: Error checking offset between POS1 and POS2 for DRIVE-CLiQ encoder monitoring channel 1.

1034: Error checking offset between POS1 and POS2 for DRIVE-CLiQ encoder monitoring channel 2.

1035: offset between POS1 and POS2 for DRIVE-CLiQ encoder on one of the monitoring channels has changed since the last commissioning.

1039: Overflow when calculating the position.

1041: Current absolute value too low (encoderless)

1042: Current/voltage plausibility error

1043: Too many acceleration phases

1044: Current actual values plausibility error.

5000 ... 5140:

PROFIsafe message values.

For these message values, the failsafe control signals (Failsafe Values) are transferred to the safety functions.

5000, 5014, 5023, 5024, 5030 ... 5032, 5042, 5043, 5052, 5053, 5068, 5072, 5073, 5082 ... 5087, 5090, 5091, 5122 ... 5125, 5132 ... 5135, 5140:

An internal software error has occurred (only for internal Siemens troubleshooting).

5012: Error when initializing the PROFIsafe driver.

5013: The result of the initialization is different for the two controllers.

5022: Error when evaluating the F parameters. The values of the transferred F parameters do not match the expected values in the PROFIsafe driver.

5025: The result of the F parameterization is different for the two controllers.

5026: CRC error for the F parameters. The transferred CRC value of the F parameters does not match the value calculated in the PST.

5065: A communications error was identified when receiving the PROFIsafe telegram.

5066: A time monitoring error (timeout) was identified when receiving the PROFIsafe telegram.

6000 ... 6166:

PROFIsafe message values (PROFIsafe driver for PROFIBUS DP V1/V2 and PROFINET).

For these message values, the failsafe control signals (Failsafe Values) are transferred to the safety functions. If "Stop B after failure of the PROFIsafe communication" (p9612) is parameterized, the transfer of the Failsafe Values is delayed.

The significance of the individual message values is described in safety fault F01611.

7000: Difference of the safe position is greater than the parameterized tolerance (p9542/p9342).

7001: Scaling value for the safe position in the 16 bit notation, too low (p9574/p9374).

7002: Cycle counter for transferring the safe position is different in both monitoring channels.

7003: error when providing the data for the "Synchronous safe position via PROFIsafe" function.

7004: PROFIsafe clock cycle not correctly synchronized to the DP clock cycle.

See also: p9555 (SI Motion transition time STOP F to STOP B (Control Unit)), r9725 (SI Motion diagnostics STOP F)

**Remedy:**

The following generally applies:

The monitoring clock cycles in both channels and the axis types should be checked for equality and the same setting applied if necessary. If the error continues to be identified, increasing the monitoring clock cycles may resolve it.

For message value = 0:

- no error was identified in this monitoring channel. Note the error message of the other monitoring channel (for MM: C30711).

For message value = 3:

Commissioning phase:

- check the encoder parameters, and if required, correct (p9516/p9316, p9517/p9317, p9518/p9318, p9520/p9320, p9521/p9321, p9522/p9322, p9526/p9326).

In operation:

- check the mechanical design and the encoder signals.

- if closed-loop control with edge modulation is parameterized (p1802[x] = 9): parameterize edge modulation for actual value sensing without encoder (p9507.5 = p9307.5 = 1).

For message value = 4:

The monitoring clock cycles in both channels should be checked for equality and if required, set the same. In combination with message value 5 from the other monitoring channel (with MM: C30711), the monitoring clock cycle settings must be increased.

For message value = 11 ... 14:

- the limit values in p9534/p9334 or p9535/p9335 are not equal or have been set too high. Correct the values.

For message value = 15 ... 30 and 90 ... 229:

- the cam positions for function SCA in p9536/p9336, p9537/p9337 or the cam tolerance p9540/p9340 are not equal. Correct the values. Increase the cam tolerance p9540/p9340.

For message value = 232:

- increase the hysteresis tolerance (p9547/p9347). Possibly set the filtering higher (p9545/p9345).

For message value = 274, 275:

- increase the cam tolerance p9540/p9340 and/or the position tolerance p9542/p9342.

For message value = 278, 279:
