

# MITSUBISHI ELECTRIC

## MAGNETIC MOTOR STARTERS AND MAGNETIC CONTACTORS

*Changes for the Better*

# MS-Nseries

Performance with a refined new design and functional beauty

Mitsubishi Electric Corporation Nagoya Works is a factory certified for ISO14001 (standards for environmental management systems) and ISO9001 (standards for quality assurance management systems)

(Note)  
Mark indicating China Compulsory Certification approval.

(Note)  
Mark indicating EC Command compliance. Products with CE Mark can be used in Europe.

TÜV Rheinland  
(Note)  
Mark indicating TUV Rheinland Group certification.

(Note)  
Mark indicating product UL/CSA certification by Underwriter's Laboratory.

# Substantial safety and functionality realized with a full lineup

## Incorporation of CAN terminal for simple wiring

By adopting a CAN terminal, there is no need to remove the screws, and losing of the terminal screw is prevented by the integrated screw holder and terminal screw. The terminal screw is set in a plastic screw holder. When each pole is moved and the screw loosened, the screw is naturally set in the screw holder. This is Mitsubishi's original CAN terminal. (Patented)  
(S-N10CX~N35CX, SD-N11CX~N35CX, SR/SRD-N4CX)

## Unified design for N series

The design has been unified for the MS-N series. The front face of the product is a bright white color, making the inside of the panel brighter and providing a clean image.

## Arc space reduced to approx. one-third!

By adopting the new extinguishing mechanism, the arc space has been reduced to approx. 1/3 (Mitsubishi comparison).

## Compatible with International Standards

Most of Mitsubishi's standard products comply with International Standards.

Applicable standards: JIS, JEM, IEC, EN, VDE, BS

Approved standards: UL, CSA, LR, BV, NK, KR, TÜV, GB

## Small-Sized Models S-N10~N35

### Simple installation and wiring

The MS-N series contactors, starters and relays can be installed on a mounting rail (35mm width). The terminals of these coils are arranged on the contactor with simple wiring. Furthermore, the distance between the center of the rail and the coil terminals is unified at 38.5mm. (S-N10 to N21, MSO-N10 to N21 and SR-N4)

### Simple inspections

The contactor can be inspected easily by removing the arc cover.

### Built-in surge absorber

The model with built-in surge absorber for coils is obtainable as an option.

### CAN terminal realizes safety and speedy

The models with finger protection are safer and speedier even if the lug of a closed type eyelet (ring) terminal plate is used. (S-N10CX~N35CX, SD-N11CX~N35CX, SR/SRD-N4CX)

Pull up the screw holder.      Insert the closed eyelet connector, and push up the screw holder.      Tighten the screw.

Stronger barrier strength is improved with the thermoplastic mold.

### Improved magnet

By using a spiral kick-out spring, the dynamic balance of the moving parts is improved, bouncing is reduced, and the core life is extended. Furthermore, the core movement is generally stabilized. The efficient magnet has been achieved through modern technology of the magnet section using a computer. The contactor has a performance to withstand a voltage drop to 35% with the closed contact.

## Medium-and Large-Sized Models: S-N50~S-N800

### Finger Protection Compatible

An easy-to-install terminal cover, which lays importance on further safety and is compatible with finger protection, has been prepared.

### The arc blowoff direction has been changed to further improve safety and space conservation

A new extinguishing structure, which eliminates the blow off of hot gas (arc) to the front (direction to door of control panel) when the current is cutoff has been incorporated.

In addition to improved safety, the freedom of panel design has been increased allowing space to be saved.

## DC Electromagnet with AC Operation (Patented)

### Lower Power Consumption

Coil power consumption is greatly low so MS-N Series contactors can be controlled by almost any type of relay, even small output relays of programmable controllers.

### Less Noise nor Surge from Coil

When switching a coil, the energy will be desipated within internal circuit of electromagnet

### Humming Completely Eliminated

DC excitation does not cause humming so operation is quiet.

### Contactors Coils Have Ultra-Wide Range of Ratings

The voltage rating ranges is widened and the coil type are reduced to one-third.

Internal circuit of the electromagnet

## MATCH WITH ELECTRONIC CONTROL FOR FACTORY AUTOMATION

### One-touch surge absorber

If the magnetic relay coil is opened and closed near an electronic circuit, malfunctioning of the electronic circuit could be induced by a surge voltage. The UN-SA type surge absorber suppresses the surge voltage when this coil is opened and closed. In

addition to the general varistor type and the CR type that lays importance on suppressing the induction voltage when starting, the type with operating indicator (varistor type), and the varistor type with CR are available.

### Auxiliary contact unit with low level contact

This is an auxiliary contact unit with low level contact, capable of opening and closing the low voltage and minute current of the electronic control circuit. It can be installed with one touch onto the magnetic contactor or magnetic relay that opens and closes the power of the motor, etc. The junction relay for opening and closing the low voltage and minute current is not needed, so this unit is suitable for opening and closing electronic input circuits in programmable logic controllers, etc. A compact microswitch is used for the low level contact, so the unit will not malfunction due to fields and surge voltages from the main circuit current and coil of the magnetic contactor.

A 1NO+1NC low level contacts and 1NO+1NC standard contacts are built-in, so the opening and closing of 200VAC and 24VDC can be handled with one unit.

### Interface unit

#### ◆2 types of inputs

The long life no-contact output type (UN-SY21, SY31) and contact output type (UN-SY22, SY32) are available.

#### ◆One touch installation

The UN-SY21, SY22, SY31 and SY32 types can be mounted with one touch onto the coil terminal. Post-installation work is easy.

#### ◆Single standalone unit

A single unit installation type (UN-SY11, SY12) is available for the S-KR11 and S-N80 to N400 magnetic contactor.

**Direct installation is possible on the following units:**  
**S-N series (Magnetic contactor) 65A frame or less**  
**SR-N series (Magnetic relay) 4-pole, 5-pole and 8-poles types**

## Even Greater Contact Reliability

Contact reliability has been greatly improved by the bifurcated auxiliary moving contact

# 1. GENERAL PURPOSE CONTACTORS & STARTERS

Series MS-N

## 1.1 Conformity to International Standards

Mitsubishi magnetic motor starters and contactors are designed to conform to the relevant IEC recommendations and to the standards of as many countries as possible. Specifically, they conform to the following:

IEC60947-4-1 International  
EN60947-4-1 Europe

VDE0660 Germany  
NEMA-ICS U.S.A

Table 1.1

N20~N35 ; AC12V~AC380V

N50~N150 ; AC24V~AC500V

N180~N400 ; AC48V~AC500V

DC coil designation DC12V~DC220V

2. For contactors, standard models are with TÜV mark on the product.

For other products, standard models are with no TÜV mark on the product.

3. Finger protection type is certified according to DIN VDE 0106 part 100. For finger protection type, order model name followed by suffix "CX".

4. Models with built-in surge absorber (model name followed by "SA") are also certified.

5. Mirror contact function compliance certification has been obtained from TÜV. This product is suitable for use in a machine tool's interlock circuit. The mirror contact function refers to a function in which the auxiliary NC contact can withstand a 2500V impulse voltage without contacting even if the main contact melts. 3

TH-N400RHKP/HZKP	EN60947-4-1	J9851172

## Auxiliary Contact Block

Table 1.1.2 (5)

Model Name	Applicable standard	Registration No.
UN-AX2(CX)	EN60947-5-1	J9551337
UN-AX4(CX)		
UN-AX11(CX)		
UN-AX80	EN60947-5-1	R9851225
UN-AX150		

Notes: 1. Standard models are applicable under following conditions.

- Main circuits (Main contacts) : AC-3 rated current at 440V AC max. and rated continuous current.  
 Auxiliary contacts : AC-15 rated current at 550V AC max. (SD-Q(R)11~Q(R)19 : 440V AC max.) and rated continuous current.  
 Operation coil : AC coil designation  
 SR-N4 ; AC12V~AC440V  
 DC coil designation DC12V~DC220V (SD-Q(R)11~Q(R)19 : DC12V~DC24V)

2. For contactors, standard models are with TÜV mark on the product.  
 For other products, standard models are with no TÜV mark on the product.  
 For contactor relays, order model name followed by suffix "DZ" if TÜV mark on the product is required.  
 3. Finger protection type is certified according to DIN VDE 0106 part 100. For finger protection type, order model name followed by suffix "CX".  
 4. Models with built-in surge absorber (model name followed by "SA") are also certified.  
 5. Miller contact function compliance certification has been obtained from TÜV. This product is suitable for use in a machine tool's interlock circuit. The miller contact function refers to a function in which the auxiliary NC contact can withstand a 2500V impulse voltage without contacting even if the main contact melts.  
 6. If the SD-Q11 with INC is required, it must be so indicated when placing an order.

## Solid state contactor (for heater load)

Table 1.1.3 (6)

Model Name		Continuous current rating [A]
Batch control	Individual control	
US-H20(RM)(HZ)	US-H20DD(RM)(HZ)	20
US-H30(RM)	US-H30DD(RM)	30
US-H40	US-H40DD	40
US-H50	US-H50DD	50

Notes: 1. "(HZ)" has no cooling fin. "(RM)" is available rail mounting.

2. The US-H□ (DD) HZ type is certified at the continuous current rating when combined with the fin used on the US-H□ (DD) type.

3. The US-H□ (DD) HZ type is UR certified.

# 1.1.4 CCC Certified Products

Magnetic motor starters, etc., are designated as products targeted for China Compulsory Certification. CCC certification must be acquired before the product is exported to main land China from Domestic or marketed in China. The certified models are shown in Tables 1.1.4 (1-1) to 1.1.4 (8-2). The option units (UN-CV, ML, RR, SA, etc.) which are mounted on the magnetic motor starter and which do not have a load switching function are excluded from the CCC certification target.

## Magnetic motor starter

Mounting on 35mm rail		← Available <sup>3</sup> →										—	—	—	—	—	—	—	—	—					

Notes: 1. Additional head-on type aux. contact blocks cannot be attached to the enclosed type, mechanically latched type of size N50 & N65.  
 2. Surge absorber is provided as a standard on ac operated contactors and starters of sizes 2xN50 to 2xN800.  
 3. Remove a mounting plate for mounting on 35mm rail of sizes 2xN25 to 2xN65.

# 1.4 Technical Data of Series S-N Contactors

DC-13 110VDC	A	0.6
	A	0.8 <sup>1</sup>
220VDC	A	0.2

Note: 1 UN-AX2(CX), UN-AX4(CX), UN-AX11(CX).

## 1.4.2 Performance of Series S-N Contactors

### Electrical Life

The electrical life of the main contacts of a contactor is determined mainly by the circuit-opening duty it will perform. The relationship between electrical life and rated current of Mitsubishi contactors under normal and jogging duties of squirrel-cage motors is shown in Fig. 1.4.2(1) and 1.4.2(2). In the case of a mixture of normal and jogging duties, the expected contactor life can be determined as follows:

$$N = Nr/1 + \frac{\alpha}{100} (Nr/Ni - 1) \dots\dots\dots \text{Eq.1.1}$$

where N : Life in the case of  $\alpha\%$  jogging duty  
 Nr : Life in the case of normal duty  
 Ni : Life in the case of 100% jogging duty  
 $\alpha$  : Percentage of jogging duty

Electrical life versus rated operating current

— Normal duty, 6le on, 1e off, on-load factor 40%,  
 1200 operations/hour (AC3)  
 - - - Jogging duty, 6le on, 6le off, on-load factor 7%,  
 600 operations/hour (AC4)-S-N10~S-N300  
 300 operations/hour (AC4)-S-N400~S-N600  
 150 operations/hour (AC4)-S-N800

## 1.4.3 Mounting Attitude of Starters and Contactors

To assure proper performance, Mitsubishi magnetic motor starters and contactors should be mounted on a vertical supporting surface with the line terminals upwards and the load terminals downwards. The supporting surface may have a maximum inclination of 30° from the vertical in any direction.

# 1.5 When Ordering

**Contactors**, indicate the model name and the ordering designation of the coil.

**Overload relays**, indicate the model name and the ordering designation of the heater setting range.

**Motor starters**, indicate the model name, heater setting range, main circuit voltage, coil designation.

Note: Mark \* indicates a blank space.

## Coil Ratings and Ordering Designations for S-N10(CX), -N11(CX), -N12(CX), -N18(CX), -N20(CX), -N21(CX), -N25(CX), -N35(CX) and SR-N(CX)

Table 1.5.1

Rated voltage (VAC)		Ordering designation
50Hz	60Hz	
24	24	AC24V
48~50	48~50	AC48V
100	100~110	AC100V
110~120	115~120	AC120V
125~127	127	AC127V
200	200~220	AC200V
208~220	220	AC220V
220~240	230~240	AC230V
240~260	260~280	AC260V
346~380	380	AC380V
380~415	400~440	AC400V
415~440	460~480	AC440V
500	500~550	AC500V

## for S-N50(CX)~-N800

Table 1.5.2

Rated voltage (50/60Hz)	Ordering designation
100~127V	AC100V
200~240V	AC200V
260~350V	AC300V
380~440V	AC400V
460~550V	AC500V

AC24V, AC48V are available for S-N50(CX)~-N150

## for SD-N, SRD-N

Table 1.5.3

Rated voltage (VDC)	Ordering designation
24	DC24V
48	DC48V
100	DC100V
110	DC110V
120~125	DC125V
200	DC200V
220	DC220V

### • Coil Ratings (Closing & Tripping)

Table 1.6.3 (2)

Ordering designation	Applicable voltage
AC100V	100-127VAC 50/60Hz
AC200V	200-240VAC 50/60Hz
AC300V	260-350VAC 50/60Hz
AC400V	380-440VAC 50/60Hz
AC500V	460-550VAC 50/60Hz
DC24V	24VDC
DC48V	48VDC
DC100V	100-110VDC
DC125V	120-125VDC
DC200V	200-220VDC

### • Precautions

- Minimum energising time, both for closing and tripping must be set longer than the followings.  
 SL(D)-N21 to N220 : 0.3 sec.  
 SL(D)-N300 to N800 : 0.5 sec.
- Make sure never to over lap the energising time for closing and tripping.

SL-N35

SL-N150

## 1.6.4 Reversing Mechanically Latched Contactors

(Components for Automatic Transfer Switches)

Type **SL-2xN□**, **SLD-2xN□**, **SLxS-N□**

### Ordering Designation

• Mechanically latched & mechanically latched contactor	
Model name .....	SL-2xN35
Closing coil designation in normal left side <sup>1</sup> .....	AC200V
Tripping coil designation in normal left side <sup>1</sup> .....	DC100V
Closing coil designation in standby right side <sup>1</sup> .....	DC100V
Tripping coil designation in standby right side <sup>1</sup> .....	AC200V
Complete type designation	SL-2xN35*MC1-AC200V*MT1-DC100V*MC2-DC100V*MT2-AC200V
• Mechanically latched & normal contactor	
Model name .....	SLxS-N150
Closing coil designation in normal left side <sup>1</sup> .....	AC200V
Tripping coil designation in normal left side <sup>1</sup> .....	AC100V
Coil designation in standby right side <sup>2</sup> .....	AC100V
Complete type designation	SLxS-N150*MC1-AC200V*MT1-AC100V*AC100V

Notes: Mark\*indicates a blank space.

1. See Table 1.6.3(2)      2. See Table 1.5.2

Table 1.6.4

## 1.7.4 Enclosed Non-Reversing Motor Starters with Pushbutton Switch (IP 20)

Type **MS-N□PM**

When the thermal overload relay is tripped, type MS-N□PM enclosed direct-on-line motor starters can be easily reset by pushing the OFF button on the enclosure (MS-N10 KPPM and -N11 KPPM can be reset by pushing the RESET button).

### Ordering Designation

Model name ..... MS-N21KPPM  
 Heater designation of overload relay ..... 15A  
 Main circuit voltage ..... 220V  
 Control circuit voltage and frequency ..... 220V 50Hz

---

Complete type designation MS-N21KPPM\*15A\*220V\*220V 50Hz

*Note: Mark\*indicates a blank space.*

## 2. MOTOR PROTECTION RELAYS

### 2.1 Thermal Overload Relays

TH-N Series Thermal Overload Relays Will Make a Convenience and Safer Systems.

TH-N12

TH-N20

TH-N12CX

#### A Selection of Relays for Optimum Motor Protection Characteristics

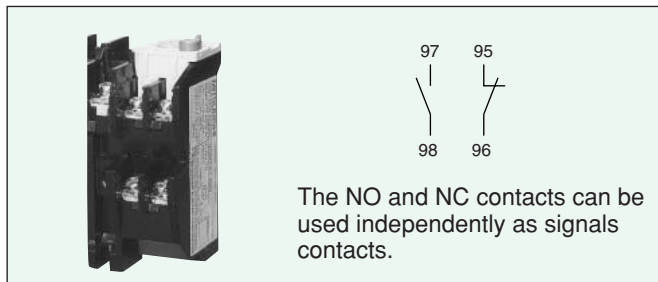

The thermal relay line-up includes two-element units as well as the phase failure protection type models (three-element relays), all with the same external dimensions.

This array of protection characteristics allows you to choose the units best suited to your motor protection needs.

#### Maintenance and Inspection Are Easy

An operation indicator makes maintenance and inspection easy. Checks can be performed using manual operations.

#### 1NO + 1NC Contacts

#### • Display and External Trip Mechanism

#### Rated Current Can Be Set Easily

The value of the rated current is displayed on a dial. Simply adjust the dial to the full-load current of the motor and motor protection is assured.

#### Finger Protectors

Models with finger protectors that conform to DIN VDE 0106 Part 100 (TH-N□CX) are also available.

#### Various Accessories

- Independent mount adaptor for TH-N12(CX) : UN-HZ12(CX)
- Reset release : UN-RR□□□
- Trip indicating LED : UN-TL□□

#### Trip-Free Reset Bar

Choose between automatic and manual reset. Also features tripfree reset bar mechanism.

#### • Switching Between Automatic and Manual Reset

Table 2.1.1

Note: Suffix "HZ" denotes separate mounting type.

## 2.2 Electronic Motor Protection Relays

Series ET-N

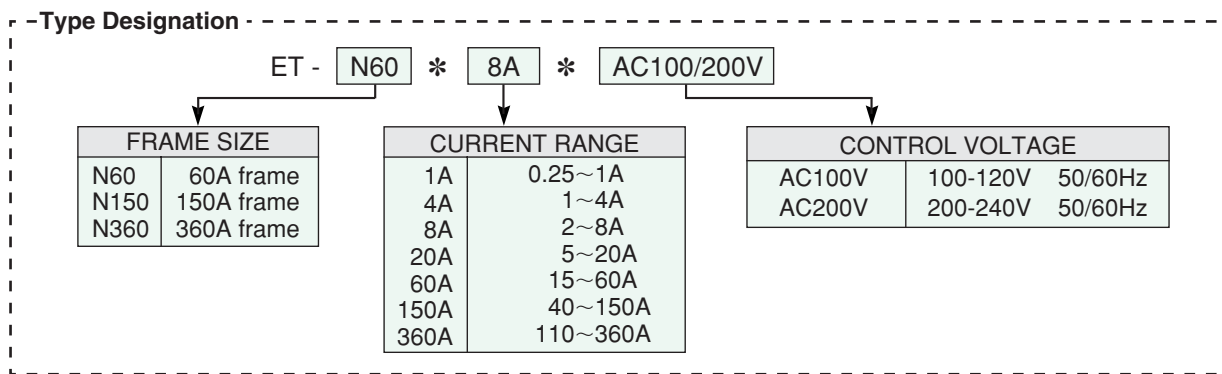

ET-N60 60A

The MITSUBISHI series ET-N relay is an excellent relay that can protect motors electrically. Those series ET-N relays have the following excellent features.

### ■ Features

- Selectable Protection Mode
  - Overload (including locked rotor condition)
  - Phase failure (including current unbalance)
  - Incorrect phase sequence
- Excellent Wide Current Range
- Easy Wiring
- Easy Setting and Maintainance
- Selectable Tripping Time at 600% of setting.
  - Standard trip (7s.)
  - Quick trip (3s.)
  - Fast trip (5s.)
  - Medium trip (15s.)
  - Slow trip (30s.)
- Withstands High Overcurrent
- Fine Indication of Trip Mode
- Conformity to International Standards
- Can be mounted on 35mm rail (ET-N60)

### ■ Specifications

#### • Ratings and characteristics

Table 2.2.1

Frame size [Current range]		N60[1A]	N60[4A]	N60[8A]	N60[20A]	N60[60A]	N150[150A]	N360[360A]

	Control terminals	mm <sup>2</sup>	1.25-2						

Note: ET-N relay cannot be used on DC circuit

## • Characteristic Curves

\*Note: This electronic motor protection Relay does not contain thermal memory in accordance with IEC 60947-4-1.

## • Selection of Protection Mode & Tripping Time

Table 2.2.2

The selector switch is set at position "7" (overload and phase failure protection mode; standard trip type) when shipping. So please reset the position of the changeover switch according to Table 2.2.2 before installation.

Protection mode	Overload tripping time at 600% of setting(s)	Symbol on changeover switch
Overload, phase failure and reversal phase [3E]	3	0
	5	1
	7	2
	15	3
	30	4
Overload and phase failure [2E]	3	5
	5	6
	7	7
	15	8
Overload only [1E]	30	9
	3	A
	5	B
	7	C
	15	D
	30	E

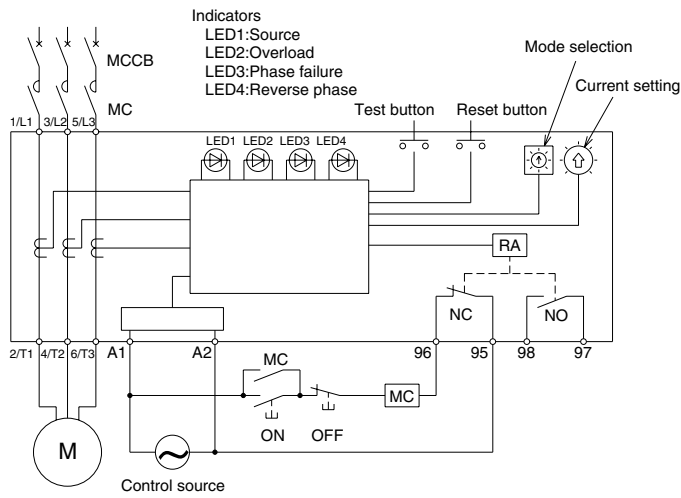

## • Trip Class

mode	Trip class
0, 5, A	5
1, 6, B	—
2, 7, C	10
3, 8, D	20
4, 9, E	—

## • Application to High Voltage or Big Motor Circuit

The high voltage current transformer (secondary current: smaller than 5A; capacity: more than 5VA) should be connected to ET-N60\*8A in the star connection, when the load is high voltage or big AC motor.

## ■ Wiring Precautions

- The control source should be wired in the same phases as the contactor control source.
- When the load is a single phase motor, use 1/ L1-2/T1 and 5/L3-6/T3 phases. And re-set the position of changeover switch to "A" to "E".

- If capacitors are used to correct the power factor, connect the capacitor in the power source side of the ET-N relay.

## ■ Outline Dimensions

**ET-N60(1-60A) (Mass: 0.3kg)**

**ET-N150 (Mass: 1.6kg)**

**ET-N360 (Mass: 2.5kg)**

# 3. DEFINITE PURPOSE CONTACTORS & STARTERS

## 3.1 DC Contactors

Series DU

DU-A60

DU-K180

The MITSUBISHI series DU contactors are designed for DC circuits, that is the variable-speed drive-control circuits (SCR switching circuit) and DC motor control circuits.

### ■ Features

- Compact design
- High break capacity
- CSA certified models are also available on AC operated type, add suffix "UR" immediately after the Frame size.
- Double break contacts
- UL recognized component (If  marking is required add suffix "UR" immediately after the Frame size).
- Long Life

### ■ Specifications

- Number of main contacts type DU : 2NO1NC, type DUD : 2NO  
Number of auxiliary contacts type DU & DUD : 2NO2NC

## 3.2 Medium Voltage Vacuum Contactors

Series SH-V

SH-V160

The MITSUBISHI series SH-V contactors are specially designed for the areas of mining, pumping, sawing and other applications where voltage above 1500VAC are frequently used.

### ■ Features

- Compact design
- Lightweight
- Long service life
- Easy inspection & maintenance
- Applications over a wide range of voltage
- High insulation strength

### Type Designation

Note: Mark \* indicates a blank space.

Note: 1. Only AC operated non-reversing type is available for Frame size 600.  
SH-V600 is not presently certified by CSA.

## ■ Specifications

### ● Ratings

# 3.3 Compact 3-Pole Contactors

The MITSUBISHI series S-N□8 compact 3-pole contactors are designed for limited panel space applications such as machine control panels.

S-N48

## Features

- Compact design—Very limited required mounting space.
- Front clip-on type auxiliary contact block can be added.
- Coil surge absorbers are available. • Can be mounted on 35mm rail.

Note: Mark\* indicates a blank space

## 3.4 NC Main Contact Contactors

B-N20

B-N65

The MITSUBISHI series B-N contactors are specially designed for the dynamic braking circuit of motors, switching motor-starting resistors and switching of emergency lighting.

### Features

- 2 or 3 NC main contacts.
- Suitable for a variety of loads.
- Compact design
- Both AC operated models & DC operated models

### Specifications

- Number of main contacts: Special arrangement 3 NC can be supplied only with type B-N20/N65.

# 3.5 Delay Open Type Magnetic Starters & Contactors

Series S/MSO-N□DL

MSO-N□DL

The MITSUBISHI series MSO-N□DL starters and S-N□DL contactors are specially designed to prevent instantaneous “drop-out” when connected to motors, resulting from momentary voltage drop or power interruption caused by lightning or similar. A capacitor connected in parallel with the operating coil of the contactor discharges so that the starter or contactor will remain closed for 1 to 4 seconds.

### Type Designation

Note: Mark \* indicates a blank space.

### Diagrams Circuit

### Typical Wiring Diagram

Note: R1-R1 & S3-S3 (---) wiring is omitted if the control circuit voltage is 100VAC or the main circuit voltage differs from the control circuit voltage.

● **Caution**

1. When the circuit breaker (NF) is made (ON) and disconnected (OFF) repeatedly within a short time interval [eg: when the instantaneous power failure occurs within a short time interval], electrical parts might be damaged or specified holding time might not be assured.  
Causes; 1) Overload occurs by frequent inrush current to RF and R1.  
2) Enough electricity is not charged into the capacitor (C).
2. Even after the power is turned off (after the NF is disconnected), current might remain in the capacitor (C). So please take care to avoid the electrical shock, when you check or repair the system.

Notes: 1. Dimensions CB is the arc clearance.

2. Outline dimensions of S-N□DL are the same as those of MSO-N□DL, except for S-N300/N400DL. Dimension B of S-N300/N400DL is 250mm.

### 3.6 DC Interface Contactors

Series **SD-Q**

SD-Q DC interface contactors designed to be directly driven by the transistor output DC24V are DC operated contactors of compact size and high ability.

- By combining the efficient electromagnet with permanent magnet, SD-Q contactors are able to be directly driven by the transistor output DC24V 0.1A of a programmable logic controller, etc. SD-Q series is lineup contained reversing contactors applied to motors of 3φ 440V5.5kW starters with the thermal overload relay, and additional auxiliary contact block, etc.

SD-Q11

MSOD-Q11

#### Features

- Special design to be directly driven by the transistor output DC24V
  - By combining an electromagnet with permanent magnet, coil operating current is reduced to DC24V55mA(1.3W) for SD-Q11 and DC24V75mA(1.8W) for SD-Q19
  - Compliance with many international standards  
Applicable standards: IEC, DIN, VDE, BS, JIS, JEM  
Approved standards: UL, CSA, TÜV
  - Built-in surge absorber
  - Provision of terminal covers
  - Mountable on a IEC 35mm width rail
  - Compact size and high performance
- SD-Q11, SD-Q12 : 3φ240V3kW      SD-Q19 : 3φ240V4.5kW  
3φ440V4kW    3φ440V5.5kW
- Mirror contact: Normally closed auxiliary contact cannot be closed when power contact is welded. The function conform to requirements of IEC60947-4-1.
  - Variable combination: Auxiliary contact block (UQ-AX2(KR)) can be added onto a contactor (SD-Q11 (SD-QR11))

### 3.7 DC Interface Modules

S-N21CX+UN-SY21CX

The MITSUBISHI type UN-SY interface module is an optional unit for S-N series contactors or SR-N series relays, controlled by the transistor output of a programmable controller.

#### ■ Features

- Easy mounting on the Type S-N10 to S-N65 contactors and SR-N series relays.
- Separate mounting type for the Type S-N80 to S-N400 contactors.
- Relay or solid state output versions are available.

#### Type Designation

Note: Suffix "CX" is available only for UN-SY21 or SY22.

#### ■ Specifications

Table 3.7.1

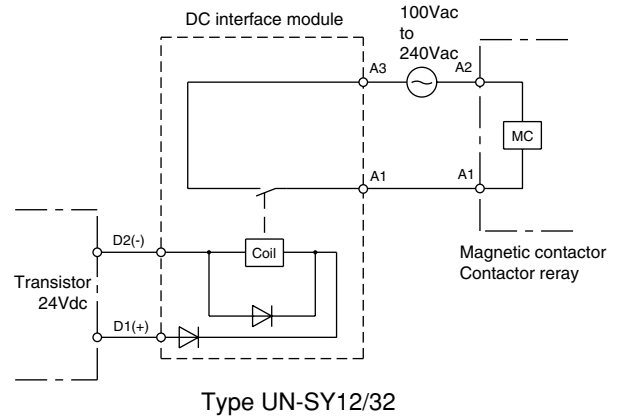

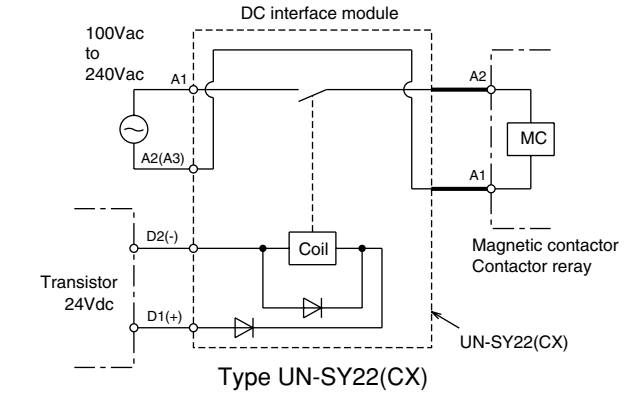

Type		UN-SY21(CX)	UN-SY31	UN-SY11	UN-SY22(CX)	UN-SY32	UN-SY12
Output		Solid state relay			Relay

	Min. working voltage	18Vdc			18Vdc		
	Max. breaking voltage	4Vdc			1Vdc		
	Power consumption	0.4W			0.24W		
Output	Rated voltage	100Vac to 240Vac 50/60Hz					
	Rated operating current	0.5A (category AC11)					
	Response time	11ms or less			10ms or less		
	OFF-state leakage current	3mA/240Vac			–		
	Mechanical life	–			5 million operations		
	Electrical life	–			1 million operations		
Ambient temperature		–10 to 55°C					

## ■ Connection

(1) Solid State Output

(2) Relay Output

## ■ Mounting

- Direct mounting – Type S-N10 to S-N65 and SR-N4  
Remove the coil terminal screw from the contactor or relay, then slide the tab on the interface module to the groove on the contactor or relay. Fasten the connecting conductor with the coil terminal screw.
- Separate mounting – Type S-N80 to S-N400  
Mount the interface module (UN-SY11/12) with screw on a panel as follows.

## ■ Outline Dimensions

# 4. RELAYS

## 4.1 Contactor Relays

SR-N4

The MITSUBISHI series SR-N contactor relays are specially designed for use in low voltage control circuit applications. Series SR-N have many superior features.

### ■ Features

- High reliability: By adopting bifurcated moving contacts and by improving the shape of the contacts, contact performance has been made more reliable than ever.
- Long life
- Easily visible coil ratings
- Various accessories common with the series S-N contactors (Head-and side clip-on type additional aux. contact blocks, surge absorbers, safety covers)
- Finger protected types are available (DIN 57106/VDE 0106 Part 100)
- Can be mounted on 35mm rail
- Dust-proof construction
- Easy wiring (self-rising terminal screws)

### Type Designation

#### ● Standard types

Notes: 1. For latched type relays, JH and LC types cannot be available.

2. When ordering the latched type relays, please specify the closing coil and tripping coil voltage.

ex: SRL-N4 \* MC-AC200V \* MT-AC100V \* 4A  
 closing coil tripping coil

3. Only suffix "CX" is admitted to make any combination with other tabulated suffixes.

Note: Mark \* indicates a blank space.

### 4.1.4 Spare Coils & Accessories

Spare coils and accessories are common with the series S-N contactors.

- Spare coils ..... See Table 1.8.1 (except for Type SRL(D) latched relays)
- Surge absorbers (suppressors) ..... See Table 1.8.6

### 4.1.5 Outline Dimensions

#### • Key to Dimensions

Model	C1	C2	Mass (kg)
SR-N4(CX)	78	106	0.3
SRD-N4(CX)	110	138	0.62
SRL-N4(CX) SRLD-N4(CX)	134	—	0.45

Note: Front clip-on and side clip-on contact block should not be mounted both.

## 4.2 Voltage Detection Relays

SRE-AA

The MITSUBISHI series SRE relays are specially designed for voltage sensing. The type SRE-A is specially designed for the detection of undervoltage or overvoltage conditions. The type SRE-K is particularly useful for the switching of automatic transfer panels. The type SRE-K can detect undervoltage by simply connecting to the power-source terminals.

### ■ Features

- High sensibility
- High reliability
- Easy wiring
- High surge tolerance
- Wide detective voltage range

#### Type Designation

### ■ Specifications

#### ● Selection table

Table 4.2.1

Type	Detectable voltage range	Permissible input voltage (continuous)	Input impedance	Operation voltage

	AC120V	90-125VAC	132VAC		
	AC200V	150-210VAC	240VAC		
	AC240V	180-250VAC	264VAC		
	DC 12V	9-12.5VDC	14VDC	Input 1.7W	
	DC 24V	18-25VDC	28VDC		
SRE-KT	AC100V	80-115VAC	120VAC	Input 1.8VA	
	AC120V	95-130VAC	132VAC		
	AC200V	160-230VAC	240VAC		
	AC240V	190-260VAC	264VAC		
	DC 12V	10-14VDC	14VDC	Input 1.7W	
	DC 24V	20-28VDC	28VDC		
	DC100V	80-115VDC	120VDC		

Note: The type SRE-A □ D, for DC detection can be used for full-wave rectification voltage.

#### ● Operating Condition

Fig 4.2.1

## ● Ratings and characteristics

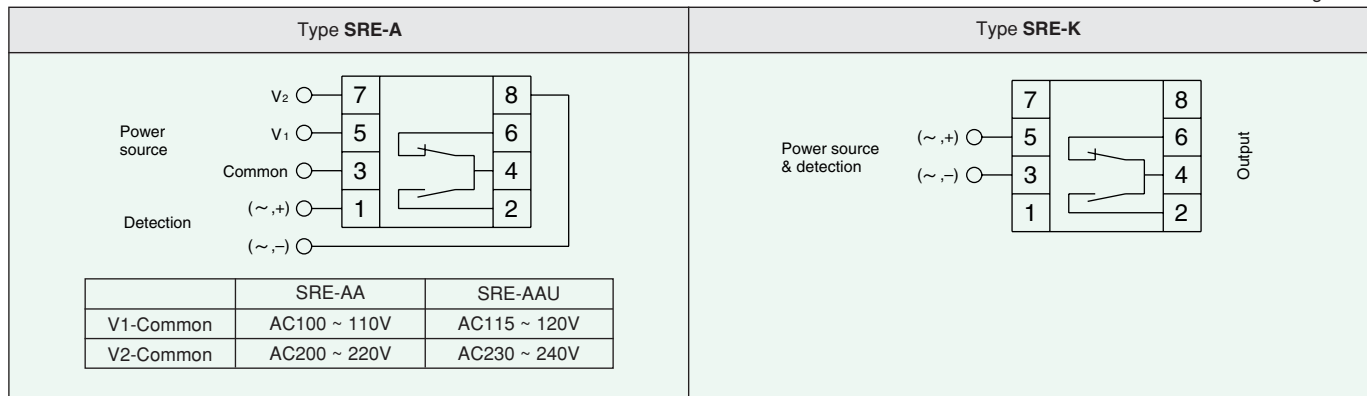

Table 4.2.2

Type	SRE-A		SRE-K	
Output contact arrangement	1 changeover			
Conventional free air thermal current	lth	A	3	
Rated operating current of output contact	Category AC-15	110VAC 220VAC	A A	1.5 1.0
	Category DC-13	24VDC 110VDC	A A	1.0 0.2
Accuracy	Repetitive operation <sup>1</sup>		%	
	Control voltage fluctuation		%	
	Ambient temperature change		%	
Response time(at 150% of the rated voltage)	msec		100 to 200	
Mechanical life	operations		10 million	
Electrical life	operations		0.25 million	
Permissible ambient temperature/humidity	°C/ %RH		-10 to +55/max. 85	
Power consumption	VA		2	
Operation voltage tolerance (ambient temperature 40°C)	%		85 to 110   -	
Withstand voltage	VAC		1500 [1 minute]	
Insulation resistance (500VDC insulation tester)	MΩ		min. 100	
Vibration resistance	10 to 55Hz		m/s <sup>2</sup>	
Shock resistance	10msec half sine wave		m/s <sup>2</sup>	
			19.6 98	

Note: 1. Repetitive operation accuracy (%) =  $\pm \frac{1}{2} \times \frac{\text{max. measurement} - \text{min. measurement}}{\text{max. scale value}} \times 100$ .

## ■ Wiring precautions

Fig 4.2.2

## ■ Outline dimensions

## 4.3 Re-Starting Relay

UA-DL2 with PF-08RM

The MITSUBISHI series UA-DL re-starting relays are specially designed for automatic re-starting. When the power recovers from an instantaneous power failure or voltage drop the UA-DL re-starts the stopped equipment or machines.

### ■ Features

- Easy installation and easy wiring
- Compact design
- Versatility of the control voltage (100VAC & 200VAC)
- Indicator lamp is provided.
- Selectable permissible max. power failure time (1sec. & 2sec.).

### ---Type Designation---

UA-DL2 \* AC100/200V

SOCKETS type: PF-08RM/08TM

See page 66

CONTROL VOLTAGE	
Ordering designation	Rated control voltage (50/60Hz)
AC100/200V	100-110/200-220VAC
AC120V	100-110/110-120VAC
AC240V	200-220/220-240VAC

Notes: 1. DC control voltage type is not available.  
2. Mark \* indicates a blank space.

## ■ Specifications

### ● Ratings & characteristics

Table 4.3.1

Output contact arrangement				1 NO
Rated operating current of output contact	Category	110VAC	A	1.5
	AC-15	220VAC	A	1.0
Selection of permissible max. power failure time			sec.	1 and 2
Accuracy	Set permissible power failure time		%	-20 to +50 (when 100VAC/200VAC is applied)
	Control voltage fluctuation		%	±35
	Ambient temperature change		%	±25
Minimum energizing time			sec.	5
Electrical life			operations	0.5 million
Permissible ambient temperature/humidity			°C/ %RH	-10 to +55/max. 85
Control voltage tolerance			%	85 to 110 (rated control voltage)
Power consumption			VA	3
Vibration resistance		10 to 55Hz	m/s <sup>2</sup>	19.6
Shock resistance		10 msec. half sine wave	m/s <sup>2</sup>	98
Withstand voltage			VAC	2000 (50/60Hz 1min.)
Insulation resistance			MΩ	min. 100

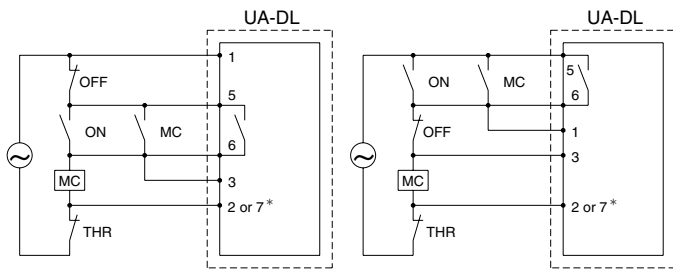

Note: 1. When shipping, permissible power failure is set to 2 secs.

When the required re-setting time is 1 sec., please turn the time setting dial to left until it stops.

When you want the permissible power failure time longer than 2 sec., please consult with MITSUBISHI.

## ● Connection diagrams

Fig. 4.3.1

Connection of control switch differs in the above 2 connection diagrams.

\* Selection table of terminals

Table 4.3.2

Control voltage	AC100/200V	AC120V	AC240V
Terminal No.			
2	100-110VAC	100-110VAC	200-220VAC
7	200-220VAC	110-120VAC	220-240VAC

1. The terminal (2) and (7) connections differ according to the control circuit voltage. Connect according to the circuit voltage. (Refer to confarm, above Table 4.3.2)
2. The external switch (OFF push-button switch in connection diagram) which issues the OFF command requires an OFF time of 50ms or more.
3. When using a relay contact instead of the push-button switch (OFF), use a contact that does not open when the power fails. If the push-button switch (OFF) section opens, UA-DL2 will turn OFF, and the magnetic contactor will not restart.
4. An electrolytic capacitor is used, so periodically check the operation time.

## ● Operation characteristics

Fig. 4.3.2

## ■ Outline Dimensions

UA-DL2 (Mass: 0.1kg)

Note: 2 pcs of locking springs are enclosed in the each package of UA-DL.

PF-08RM (Mass: 0.05kg)

PF-08TM (Mass: 0.05kg)

# 4.4 Solid State Time Delay Relays

Series SRS-H

SRS-HNPS

The MITSUBISHI series SRS-H solid state time delay relays are specially designed for high accuracy and easy mounting.

## Features

- High accuracy
- Compact design
- High reliability
- Easy mounting (for direct panel mounting or mounting on 35mm rail)
- With finger protection (terminal cover) model is available
- 1 delayed & 1 instantaneous changeover contact for ON-delay relay.

### Type Designation

## Specifications

### Time delay selection

Table 4.4.1

Relay type		Adjustable time range	Contacts
ON-delay	SRS-HNPS	3 sec. - 30 sec.	1 delayed and 1 instantaneous changeover

### Control voltages

Table 4.4.2

Ordering designation	Rated voltage
AC100V	100-120V 50/60Hz
AC200V	200-240V 50/60Hz
AC400V	380-440V 50/60Hz

### Rating & characteristics

Table 4.4.3

Type		ON-delay	
Conventional free air thermal current		A	2
Rated operating current	Category 120VAC	A	1.5
	AC-15 240VAC	A	1
	440VAC	A	0.3

Withstand voltage		[live parts to ground]	VAC
			2000 (1 min.)

### Internal wiring

## Outline Dimensions

SRS-HNPS (Mass: 0.15kg)

# 4.5 Pneumatic Time Delay Relays

Series SRT-N

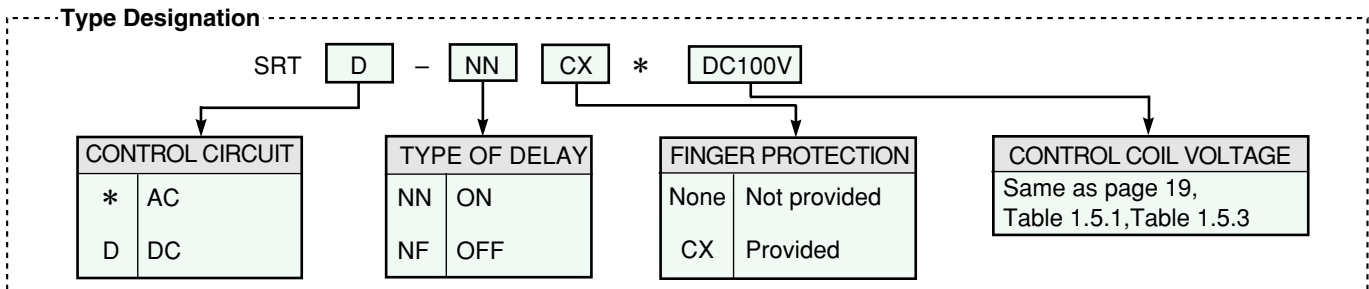

The MITSUBISHI series SRT pneumatic time delay relays are designed for general purpose time delaying, such as star-delta starters and transfer panels.

## ■ Features

- Easy delaying time adjustment
- High contact reliability: By using bifurcated moving contacts, contact performance has been made more reliable than ever.
- Finger protected types are available
- Manual testing
- 2 delayed contacts (1NO1NC) & 4 instantaneous contacts (2NO2NC)
- Can be mounted on 35mm rail

### SRT-NN

Note: Mark \* indicates a blank space.

UN-TR4AN(CX)	-	48.5	0.06

### Outline Dimensions

# 5. STAR-DELTA STARTERS

Series EYD-N

EYD-N35

The MITSUBISHI series EYD-N star-delta starters are generally suitable for squirrel-cage motors of 4kW to 250kW which can be started at no-load or reduced load during starting, the motor is star-connected, reducing current and torque to 1/3 of direct-on-line starting values.

So the voltage drop, due to starting current, can be reduced. Series EYD-N star-delta starters are the simplest and cheapest methods of all reduced-voltage starting methods. Series EYD-N star-delta starters comprise three contactors (for running, delta operation and star operation), one thermal overload relay and one time-delay relay (series SRS-H, solid-state time delay relay). The star-delta changeover time is set to 10 sec when shipped, but is easily adjustable from 3 sec. to 30 sec. The O.L.R. heater is set at the heater designation value (following) when shipped, and be sure to re-set to suit the motor full-load current in the field.

Note: Mark \* indicates a blank space

## 5.1 Selection Table

Table 5.1

Rated 3-phase motor capacity				Star-delta starter Type EYD(O)–	Heater designation A	Setting range A	Components <sup>1</sup>		
220-240VAC		380-440VAC					Running & delta contactors	Star contactor	Thermal O.L.R

US-K70

#### High-accuracy opening/closing, maintenance-free

With no electrical or mechanical wear sections, this type is a suitable maintenance-free selection for high-accuracy opening/closing (motor, heater, light, capacitor switching, etc.)

#### No sound noise, clean operation

The best suitable for applications that reduce to avoid sound noise (Ex.: hotels, hospitals, offices, or clean rooms, etc.).

#### Applicable to a wide range of main circuit voltage (US-N20(TE) to US-N50(TE))

Can be used with a wide main voltage range from 100 to 480VAC.

#### Conformity to International Standards (US-N Series)

The standard model complies with or is approved to be compliant with not only domestic standards but also various overseas standards.

#### Standard installation protection cover for live part location to improved safety (US-N Series)

A live part location protection cover, with finger protection complying with DIN and VDE Standards, is provided as a standard to improve safety.

#### Various line up and series

<Heater load>

- 2-circuit, 3-circuit integrated type
- Cycle control type power adjuster

<Motor load>

- 2-circuit, 3-circuit integrated type

<Current frame>

- 200VAC 5A to 200A frame
- 400VAC 20A to 200A frame

#### ■ US-H Series (for heater load)

US-H20

US-H40DD

US-H20HZ

#### Best suitable for heater loads

Suitable for high-accuracy opening/closing applications such as injection molding machines and semiconductor manufacturing machines, etc.

#### Applicable to a wide range of main circuit voltage

Can be used with a wide main voltage range from 24 to 480VAC.

#### Conformity to International Standards

The standard model complies with or is approved to be compliant with not only domestic standards but also various overseas standards.

#### Live part location protection cover available for improved safety (option)

A live part location protection cover (Type UN-CV501US) can be easily mounted after the control cabinet is mounted to improve safety.

## 6.2 Product Scope

### ■ US-N/K • US-H Series Models

Table 1. US-N type, US-K type solid state contactors (standard model)

200VAC class (100 to 240VAC)	AC-1 class rated operating current (A) (Note 5)		5	8	20	30	40	50	70	
	Heater capacity (kW)	1 φ 200V (Note 2)	1	1.6	4	6	8	10	14

**Table 2. US-K type solid state contactor (for DC load)**

Direct current	DC-1 class rated operating current (A)		8
	Rated voltage		DC24~110V
	For DC load US-KD8		 US-KD8
	Option	Driving unit with output	UA-SH8
Mounting on 35mm rail			Possible with standard product

Note 1. For the US-K(H)□ type, the capacity when applied for a three-phase load using two or three US-K(H)□ type units for the single-phase load is shown.

Note 2. This is the capacity per pole.

Note 3. □ in the option unit field indicates the applicable range.

Note 4. Possible with a dedicated part (US-□RM).

Note 5. If ambient temperature is higher than 40°C, the derating factor shown in Fig.1 should be applied to the rated operating current.

Note 6. When installing the output driving unit UA-SH8 type onto the US-N5SS/N8SS (TE) type, remove the US-N□ type unit's cover first.

Fig.1

## ■ US-H Series Models

Solid state contactor for heater loads, suitable for high-frequency heater switching applications such as injection molding machines and semiconductor manufacturing machines.

**Table 3. US-H type solid state contactor**

Rated operating current (AC-51) (-10 to 40°C) (Note 1)		20A	30A	40A	50A	20A	30A	40A	50A
