

Valve terminal MPA-S

FESTO

Key features

Innovative

- Flat, high-performance valves in sturdy metal housing
- MPA1: flow rates up to 360 l/min
- MPA14: flow rates up to 670 l/min
- MPA2: flow rates up to 850 l/min
- Standardised from the individual valve to the valve terminal with multi-pin plug, AS-Interface, CPI and fieldbus connection and control block
- Dream team: fieldbus valve terminal suitable for electrical peripherals CPX. This means:
 - Forward-looking internal communication system for actuating the valves and CPX modules
 - Diagnostics down to the individual valve
 - Valves can be actuated with or without (standard) separate electrical circuits

Versatile

- Modular system offering a range of configuration options
- Expandable with up to 128 solenoid coils
- Conversions and extensions possible at a later date
- Further sub-bases can be expanded using just three screws, sturdy separating seals on metal separator plates
- Possible to integrate innovative function modules
- Manual regulators, swivelling pressure gauges
- Proportional pressure regulator
- Air supply can be extended via additional pressure zones with supply plates
- Wide range of pressures
- –0.09 ... 1 MPa
- Wide range of valve functions
- Safety function with switchable pilot air

Reliable

- Sturdy and durable metal components
 - Valves
 - Sub-bases
 - Seals
- Fast troubleshooting with LEDs on the valves and diagnostics via fieldbus
- Extensive operating voltage range $\pm 25\%$
- Easy to service thanks to replaceable valves and electronic modules
- Manual override either non-detenting, detenting or secured against unauthorised activation (concealed)
- Durable thanks to tried-and-tested piston spool valves
- Large and durable labelling system, suitable for barcodes

Easy to install

- Ready-to-install and tested unit
- Reduced selection, ordering, installation and commissioning costs
- Secure wall mounting or H-rail mounting

Key features

- [1] Safe operation:
Manual override, non-detenting/
detenting or concealed
- [2] Space-saving:
Flat valves and flat plate silencer
- [3] Variable:
64 valve positions/128 solenoid
coils (fieldbus control)
24 valve positions/24 solenoid
coils (multi-pin control)
- [4] Practical:
Sturdy metal thread or pre-as-
sembled push-in fittings
- [5] Modular:
Supply plates for creating pres-
sure zones as well as numerous
additional exhaust and supply
ports
- [6] Wide range of valve functions
- [7] Convenient: large inscription la-
bels
- [8] Reliable:
Operating voltage range $\pm 25\%$,
outputs and valves can each be
switched off separately
- [9] Quick to mount:
Directly using screws or on an
H-rail, automatic earthing
- [10] CPX diagnostic interface for hand-
held devices (channel-oriented di-
agnostics down to the individual
valve)
- [11] Straightforward electrical connec-
tion:
Multi-pin connection, fieldbus in-
terface, control block, AS-interface,
CPI
- [12] Pneumatic interface to CPX
- [13] Width 10 mm, 14 mm and 20 mm
- [14] Reduced downtimes: two-colour
LED diagnostics on site

Equipment options

Valve functions

- 5/2-way valve, single solenoid
 - 5/2-way valve, double solenoid
 - 2x 3/2-way valve,
normally open
 - 2x 3/2-way valve,
normally closed
 - 2x 3/2-way valve,
1x normally open,
1x normally closed
 - 5/3-way valve
mid-position pressurised
 - 5/3-way valve
mid-position closed
 - 5/3-way valve
mid-position exhausted
 - 2x2/2-way valve
1x normally closed
1x normally closed, reversible
 - 2x 2/2-way valve
normally closed
 - 1x 3/2-way valve
normally closed
external compressed air supply
 - 1x 3/2-way valve,
normally open,
external compressed air supply
 - Manual pressure regulators
 - Pilot air switching valve
 - Proportional pressure regulators (for
CPI connection, fieldbus)
 - Pressure sensor
- All valves have the same compact di-
mensions with an overall length of
107 mm and a width of 10 mm,
14 mm or 20 mm.
A height of 55 mm makes them a per-
fect match for the electrical peripher-
als CPX.

Special features

Multi-pin terminal

- Max. 24 valve positions/max. 24 so-
lensoid coils
- Parallel modular valve links via cir-
cuit boards
- Electronics module with integrated
holding current reduction
- Any compressed air supply
- Creating pressure zones

Fieldbus terminal/control block

- Max. 64 valve positions/
max. 128 solenoid coils
- Internal CPX bus system for valve ac-
tuation
- Module for electrical valve actuation
with or without separate electrical
circuits
- Any compressed air supply
- Creating pressure zones

Individual valve

- Electrical M8 connection, 4-pin with
screw connection
- Detachable electronics module with
integrated holding current reduction

AS-Interface

- 2 to 8 valves, freely configurable
(max. 8 solenoid coils) with input
feedback.

CPI interface

- Max. 32 valve positions/
max. 32 solenoid coils

Combinable

- MPA1: flow rates up to 360 l/min
- MPA14: flow rates up to 670 l/min
- MPA2: flow rates up to 850 l/min
- MPA1, MPA14 and MPA2 can be
combined on one valve terminal

Electrical supply plate

- Increases the maximum number of
valve positions possible to 64, with
max. 128 solenoid coils
- Creation of separate, individually
disconnectable circuits (voltage
zones)
- Greater economic efficiency thanks
to more valves/solenoid coils per
valve terminal
- Increased safety as valve groups can
be individually disconnected, e.g.
for emergency-off functions

Note

The electrical supply plate is option-
ally available with M18 or 7/8" con-
nection.

Key features

Ordering data – Product options

Configurable product
This product and all its product options can be ordered using the configurator.

The configurator can be found at
→ www.festo.com/catalogue/...
Enter the part number or the type.

Part no.	Type
197330	CPX
546279	MPA-ASI-VI
546280	MPA-CPI-VI
530411	MPA-FB-VI
569926	MPAL-VI
539105	MPA-MPM-VI

Key features

Individual connection

Valves on individual sub-bases can also be used for actuators further away from the valve terminal.

The electrical connection is established using a standard 4-pin M8 plug (EN 60947-5-2).

More information
→ VMPA1

Multi-pin plug connection

The signals are transmitted from the controller to the valve terminal via a pre-assembled or self-assembled multi-core cable to the multi-pin plug connection. This substantially reduces installation time.

The valve terminal can be equipped with max. 24 solenoid coils. This corresponds to 4 to 24 MPA1 or 4 to 24 MPA14 or 2 to 24 MPA2 valves, or a combination of all of these.

Versions

- Sub-D connection
- Pre-assembled multi-pin cable
- Multi-pin cable for self-assembly

AS-Interface connection

A special feature of the AS-Interface is the simultaneous transmission of data and supply power via a two-core cable. The encoded cable profile prevents connection with incorrect polarity. The valve terminal with AS-Interface is available in the following versions:

- With two to eight modular valve positions (max. 8 solenoid coils). This corresponds to 2 to 8 MPA1, 2 to 8 MPA14 or 2 to 8 MPA2 valves, or a combination of all of these.
- With all available valve functions.

The connection technology used for the inputs can be selected as with CPX: M8, M12, Sub-D, Cage Clamp (terminals to IP20).

More information
→ Internet: as-interface

Installation system CPI

Valve terminal for installation system CPI:
The valve terminal with CP connection is provided for connection to a higher-level bus node or to control blocks. A bus node or control block additionally enables the connection of decentralised input/output units. The following bus protocols are supported:

- PROFIBUS DP
- INTERBUS®
- DeviceNet®
- CANopen
- CC-LINK®
- EtherNet/IP
- PROFINET
- POWERLINK
- EtherCAT®
- Sercos III

Four strings having up to 32 inputs and outputs can be connected to a bus node or control block. The connecting cables transmit the power supply for the input modules and the load voltage for the valves as well as control signals.

More information
→ Internet: cpi

Key features

Fieldbus connection via the CPX system

An integrated bus node manages communication with a higher-order PLC. This enables space-saving pneumatic and electronic solutions to be implemented.

Valve terminals with fieldbus interfaces can be configured with up to 16 sub-bases. In combination with the MPA1 or MPA14 and 8 solenoid coils per sub-base, up to 128 solenoid coils can thus be controlled. An MPA2 with 4 solenoid coils per sub-base can actuate 64 solenoid coils.

Variants

- PROFIBUS DP
- INTERBUS®
- DeviceNet®
- CANopen
- CC-LINK®
- EtherNet/IP
- PROFINET
- POWERLINK
- EtherCAT®
- Sercos III
- Front end controller, remote
- Front end controller
- Remote I/O
- Modbus/TCP
- CPX terminal

→ More information: www.festo.com/catalogue/cpx → Support/Downloads.

Control block connection via the CPX system

With controllers that are integrated in the Festo valve terminals, stand-alone control units to IP65 without control cabinets can be set up.

In the slave operating mode, these valve terminals can be used for intelligent preprocessing and are therefore ideal modules for designing decentralised intelligence.

In the master operating mode, terminal groups can be designed with many options and functions that can autonomously control a medium-sized machine/system.

→ More information: www.festo.com/catalogue/cpx → Support/Downloads.

Note

Note possible restrictions for the IP protection class
→ ATEX declaration of conformity

Peripherals overview

Modular pneumatic components

The modular design of the MPA enables outstanding flexibility right from the planning stage and offers maximum ease of service in operation. The system consists of sub-bases and valves.

The sub-bases are screwed together, thus forming the support system for the valves. They contain the ducts for supplying compressed air to and exhausting from the valve terminal as well as the working ports for the pneumatic drives for each valve. Each sub-

base is connected to the next using three screws. Individual valve terminal sections can be isolated and further blocks can be inserted by loosening these screws. This ensures that the valve terminal can be rapidly and reliably extended.

Modular electrical peripherals

The valves are actuated differently depending on whether a multi-pin terminal or fieldbus terminal is used.

The MPA with CPX interface is based on the internal bus system of the CPX and uses this serial communication system for all solenoid coils and a range of electrical input and output functions.

Serial links enable the following:

- Transmission of switching information
- High valve density
- Compact design
- Diagnostics related to valve position

- Separate power supply for valves
- Flexible conversion without address shifting
- Transmission of status, parameter and diagnostic data
- Option of CP interface
- CPX-CEC as stand-alone controller with access via Ethernet and web server

→ More information: www.festo.com/catalogue/cpx → Support/Downloads.

Modularity with electrical peripherals CPX

Peripherals overview

Individual sub-base

Ordering:

- Using individual part numbers

Individual sub-bases can be equipped with any valve (VMPA... of the corresponding width).

The electrical connection is established using a standard 4-pin M8 plug (EN 60947-5-2).

Designation	Description	→ Page/Internet
[1] Solenoid valve	Width 10 mm, 14 mm, 20 mm	VMPA1
[2] Manual override (MO)	Non-detenting/detenting by turning, per solenoid coil	VMPA1
[3] Cover cap, coded	After fitting the cover cap, manual override operation is non-detenting only	VMPA1
[4] Cover cap, concealed	After fitting the cover cap, manual override is blocked	VMPA1
[5] Cover cap, manual override detenting	After fitting the cover cap, manual override is detenting and can be operated without tools	VMPA1
[6] Inscription label holder	Can be pushed onto the manual override	VMPA1
[7] Sub-base	For individual valve VMPA...	VMPA1
[8] Fittings, silencers or blanking plugs	For working ports (2, 4) and working air/exhaust ports (1, 3, 5)	VMPA1
[9] Fittings and/or silencers	For pilot air supply/pilot exhaust air (12/14, 82/84) and pressure compensation	VMPA1
[10] Electrical connection M8	4-pin	VMPA1

Peripherals overview

Pneumatic components of the valve terminal – Multi-pin plug, AS-Interface

The sub-bases are prepared for either

- 2 or 4 single solenoid valves
- 2 or 4 double solenoid valves

depending on the size.

- Double solenoid valve positions can be equipped with any valve or a cover plate.

- Single solenoid valve positions can only be equipped with single solenoid valves.

Peripherals overview

Valve terminal with multi-pin plug connection

Order code:

- 32P... for the pneumatic components
- 32E... for the electric components

MPA valve terminals with multi-pin plug connection can be expanded by up to 24 solenoid coils.

The multi-pin plug connection is designed as a removable 25-pin Sub-D connection to IP65.

The cable can be selected when ordering:

- 2.5 m
- 5 m
- 10 m

In each case for max. 8 or 24 valves

Peripherals overview

Valve terminal with fieldbus interface, control block (electrical peripherals CPX)

Order code:

- 32P-... for the pneumatic components
- 50E-... for the electrical peripherals

Valve terminals with fieldbus interfaces can be configured with up to 16 sub-bases. In combination with MPA1 or MPA14 and 8 solenoid coils per sub-base, up to 128 solenoid coils can thus be equipped. An MPA2 with 4 solenoid coils per sub-base can actuate 64 solenoid coils.

Each valve position can be equipped with any valve or a cover plate. The rules for CPX apply to the equipment that can be used with the electrical peripherals CPX.
In general:

- Digital inputs/outputs
- Analogue inputs/outputs
- Parameterisation of inputs and outputs
- Integrated, convenient diagnostics
- Preventive maintenance concepts

Key features – Pneumatic components

Sub-base valve

MPA offers a comprehensive range of valve functions. All valves have a patented sealing system, which ensures efficient sealing, a broad pressure range and a long service life. They have a pneumatic pilot control for optimising performance. Compressed air is supplied via a pilot air supply port.

Sub-base valves can be replaced quickly since the tubing connections remain on the sub-base. This design is also particularly flat.

Whatever valve function is required, there are sub-base valves with one solenoid coil (single solenoid) or with two solenoid coils (double solenoid or two single solenoid valves in one housing).

Design

Valve replacement

The valves are attached to the metal sub-base using two screws,

which means that they can be easily replaced. The mechanical sturdiness of the sub-base guarantees good long-term sealing.

Extension

Cover plates can be replaced by valves at a later date. The dimensions, mounting points and existing pneumatic installations remain unchanged during this process.

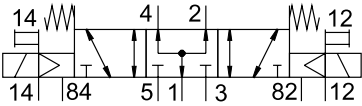

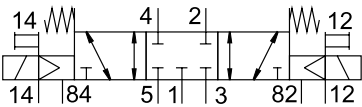

The valve code (M, MS, MU, J, N, NS, NU, K, KS, KU, H, HS, HU, B, G, E, X, W, D, DS, I) is located on the front of the valve beneath the manual override.

5/2-way valve		Valve size [mm]	Description
Code	Circuit symbol

Key features – Pneumatic components

Vertical stacking

Additional functional units can be added to each valve position between the sub-base and the valve.

These functions are known as vertical stacking modules and enable special functions or control of an individual valve position.

Pressure regulator plate

An adjustable pressure regulator can be installed between the sub-base and the valve in order to control the force of the triggered actuator.

This pressure regulator maintains a constant output pressure (secondary side) independent of pressure fluctua-

tions (primary side) and air consumption.

Standard version:

- For pressure regulation up to 6 bar or up to 10 bar
- Without pressure gauge (optional, rotatable, M5 connection with

MPA1, cartridge connection with MPA2)

- MPA2: Regulator head with 3 positions (locked, reference position, idle running)
- MPA1: Set using screwdriver

Vertical pressure shut-off plate for MPA1

The vertical pressure shut-off plate can be used to hot swap individual valves without switching off the overall air supply.

The working pressure for the individual valve can be switched off manually via the vertical pressure shut-off plate using the actuating element.

Key features – Pneumatic components

Vertical stacking

Vertical pressure supply plate for MPA2

This vertical pressure supply plate enables an individual valve to be supplied with individual operating pressure independently of the operating pressure of the valve terminal.

The exhaust and pilot air supply of the valve are still provided via the central ports of the valve terminal.

Check valve

The check valves prevent the air (back pressure) from exhaust ducts 3 and 5 from entering the solenoid valve, preventing the back pressure from having a disruptive effect on other connected actuators.

The check valves are integrated into ducts 3 and 5 of the sub-bases designed specifically for this purpose.

Please see the relevant assembly instructions:

→ www.festo.com/catalogue/mpa → Support/Downloads.

This function makes it possible to effectively protect single-acting process valves from the effects of back pressure.

This ensures reliable and feedback-free switching operations, especially in the case of rapid switching operations.

Note

- Special sub-bases are available for use with check valves.
- Standard sub-bases cannot be retrofitted with check valves.
- Pre-assembled sub-bases with integrated check valves are available.
- Check valves and fixed flow restrictors cannot be used at the same time (in the same duct).

Key features – Pneumatic components

Vertical stacking

Vertical stacking components, valve size 10 mm

- [1] Valve VMPA1
- [2] Valve VMPA1, retaining screws replaced by long version (included in the scope of delivery of the regulator plate)
- [3] Vertical pressure shut-off plate VMPA1-HS
- [4] Regulator plate VMPA1
- [5] Sub-base

Vertical stacking components, valve size 20 mm

- [1] Valve VMPA2
- [2] Vertical pressure supply plate
- [3] Regulator plate VMPA2
- [4] Sub-base

Fixed flow restrictor for manifold sub-bases MPA1

- [1] Valve VMPA1
- [2] Fixed flow restrictor
- [3] Retaining bracket
- [4] Sub-base

The fixed flow restrictor can be used to permanently set the exhaust flow rate in ducts 3 and 5. To be able to screw the restrictor into the sub-base, the retaining bracket is first pressed into the exhaust openings on the sub-base as far as the stop.

The fixed flow restrictor can then be screwed in flush with the top side of the retaining bracket. The restrictor screw cuts a thread into the retaining bracket as it is screwed in. As the restrictor is being screwed in, two hooks on the retaining bracket also deform to fix it into the sub-base.

Key features – Pneumatic components

Vertical stacking

Check valve

- [1] Valve VMPA14
- [2] Assembly tool
- [3] Check valve
- [4] Sub-base

Festo check valves can only be used in combination with the sub-bases designed specifically for this purpose. The check valves should be installed according to the specifications using the enclosed assembly tool. Once installed, the check valves cannot be removed.

Please see the relevant assembly instructions:

→ www.festo.com/catalogue/mpa → Support/Downloads.

There are special sub-bases available that facilitate the installation of check valves for widths 14 mm and 20 mm.

Note

- Special sub-bases are available for use with check valves.
- Standard sub-bases cannot be retrofitted with check valves.
- Pre-assembled sub-bases with integrated check valves are available.
- Check valves and fixed flow restrictors cannot be used at the same time (in the same duct).

Key features – Pneumatic components

Vertical stacking

Mode of operation of the pressure regulator plate (P regulator) for port 1; code: PA, PF

This pressure regulator regulates the pressure upstream of the valve in duct 1. Ducts 2 and 4 thus have the same regulated pressure.

During exhausting, the exhaust flow in the valve is from duct 2 to duct 3 and from duct 4 to duct 5.

Benefits

- The pressure regulator is not affected by exhausting, since the pressure is regulated upstream of the valve.
- The pressure regulator can always be adjusted, since the pressure from the valve terminal is always present.

Application examples

- An equal working pressure is required at working ports 2 and 4.
- A working pressure (e.g. 3 bar) lower than the operating pressure at the valve terminal (e.g. 8 bar) is required.

Operating mode of the pressure regulator plate (B regulator) for port 2; code: PC, PH

This pressure regulator regulates the pressure in duct 2 after the pressure medium flows through the valve. During exhausting, the air flow in the valve is exhausted from duct 2 to duct 3 via the pressure regulator.

Constraints

The pressure regulator can only be adjusted in the switched state (e.g. the valve has switched to 2 and exhausts from 4 to 5).

Sample application

The pressure regulator facilitates the reduction of pressure at port 2 of an individual valve rather than the operating pressure of the valve terminal

Key features – Pneumatic components

Vertical stacking

Operating mode of the pressure regulator plate (A regulator) for port 4; code: PB, PK

This pressure regulator regulates the pressure in duct 4 after the pressure medium flows through the valve. During exhausting, the air flow in the valve is exhausted from duct 4 to duct 5 via the pressure regulator.

Constraints

The pressure regulator can only be adjusted in the switched state (e.g. the valve has switched to 4 and exhausts from 2 to 3).

Sample application

If different working pressures are required at ports 4 and 2. The pressure from duct 1 is present at port 2.

Operating mode of the pressure regulator plate (B regulator, reversible) for port 2, reversible; code: PL, PN

The reversible B regulator splits the supply air in duct 1 and regulates the pressure upstream of the valve in duct 3 (the unregulated pressure from duct 1 is in duct 5). The regulated air is then routed to duct 2. The valve is thus operated in reverse mode.

During exhausting, the exhaust flow in the valve is from duct 2 to duct 1 and the air is returned to duct 3 via the intermediate plate.

Application examples

- If a different pressure than the operating pressure of the valve terminal is required in duct 2.
- When fast exhausting is required.
- When the pressure regulator must always be adjustable.

Benefits

- Fast cycle times
- 50% higher exhaust flow rate, as air is not exhausted via the pressure regulator. The load on the pressure regulator is also reduced.
- No quick exhaust valves are required.
- Operating pressure is always present at the pressure regulator, as the pressure is regulated upstream of the valve, i.e. the regulator can always be adjusted.

Note

Reversible pressure regulator plates should only be combined with valves that can be operated in reverse mode.

Constraints

- 2x 3/2-way valves (code N, K, H) cannot be used, as pressure is present at ports 3 and 5.

Key features – Pneumatic components

Vertical stacking

Operating mode of the pressure regulator plate (A regulator, reversible) for port 4, reversible; code: PK, PM

The reversible A regulator splits the working air in duct 1 and supplies the pressure upstream of the valve into duct 5 (the unregulated pressure from duct 1 is in duct 3). The regulated air is then routed to duct 4. The valve is thus operated in reversible mode.

During exhausting, the exhaust flow in the valve is from duct 4 to duct 1 and the air is returned to duct 5 via the intermediate plate.

Application examples

- If a different pressure than the operating pressure of the valve terminal is required in duct 4.
- When fast exhausting is required.
- When the pressure regulator must always be adjustable.

Note

Reversible pressure regulator plates should only be combined with valves that can be operated in reverse mode.

Benefits

- Fast cycle times
- 50% higher exhaust flow rate, as air is not exhausted via the pressure regulator. The load on the pressure regulator is also reduced.
- No quick exhaust valves are required.
- Operating pressure is always present at the pressure regulator, as the pressure is regulated upstream of the valve, i.e. the regulator can always be adjusted.

Constraints

- 2x 3/2-way valves (code N, K, H) cannot be used, as pressure is present at ports 3 and 5.

Key features – Pneumatic components

Description of proportional pressure regulator

The proportional pressure regulator VPPM-... is used to regulate pressure proportional to a specified setpoint value.

A built-in pressure sensor records the pressure at the working port and compares this value with the setpoint value. In the event of deviations between the setpoint value and actual value,

the valve regulates until the output pressure has reached the setpoint value. For a constant pressure supply, which is required for high control quality, the proportional pressure regulator has an additional supply port. The proportional pressure regulator can be configured via the PLC or on-site via the interface for CPX-FMT. The pro-

portional pressure regulator can be used for CPI connection and fieldbus.

Note

Output pressure will be unregulated if there is a break in the power supply cable.

Proportional pressure regulator Illustration	Code	Type	Linearity error full-scale [%]	Input pressure 1 [MPa]	Pressure regulation range [MPa]

Key features – Pneumatic components

Terms related to the proportional-pressure regulator

Hysteresis

There is always a linear relationship within a certain tolerance between the setpoint value entered and the pressure output. Nevertheless, it makes a difference whether the setpoint value is entered as rising or falling. The difference between the maximum deviations is referred to as hysteresis.

Linearity error

A perfectly linear progression of the control characteristic of the output pressure is theoretical. The maximum percentage deviation from this theoretical control characteristic is referred to as the linearity error. The percentage value refers to the maximum output pressure (full scale).

Response sensitivity

The response sensitivity of the device determines how sensitively one can change, i.e. adjust, a pressure. The smallest setpoint value difference that results in a change in the output pressure is referred to as the response sensitivity. In this case, 0.01 bar.

Repetition accuracy (reproducibility)

The repetition accuracy is the margin within which the fluidic output variable is scattered when the same electrical input signal coming from the same direction is repeatedly adjusted. The repetition accuracy is expressed as a percentage of the maximum fluidic output signal.

Zero point suppression

In practice, there can be a residual voltage or residual current at the setpoint input of the VPPM via the setpoint generator. Zero point suppression is used so the valve is reliably exhausted at a setpoint value of zero.

Key features – Pneumatic components

Cover plate

Plate without valve function for reserving valve positions on a valve terminal.

Valve and cover plates are attached to the sub-base using two screws.

Valve function		Width [mm]	Description
Code	Circuit symbol		
L	—	10, 14, 20	For valve terminal only: cover plate for valve position

Compressed air supply and exhaust

Pneumatic interface

The valve terminal MPA can be supplied with air at one or more points. This ensures that the valve terminal will always have an adequate air supply and exhaust, even with large-scale expansions. The main supply to the valve terminal is located on the pneumatic interface, which links the electrical and pneu-

matic parts. Additional provision is made for several supply plates.

supply plates and on the right end plate (VMPA-ERP-G).

Exhausting is either via integrated flat plate silencers or common lines for ducted exhaust air.

These exhausts are located on the pneumatic interface as well as on the

Supply plate

When there is a need to increase the air supply, additional supply plates can be provided.

Exhausting is either via integrated flat plate silencers or common lines for ducted exhaust air.

For ducted exhaust air, at least one additional supply plate is required, which

is used to exhaust the air from the pilot air supply (port 82/84) (when using a right end plate without port 82/84).

Vertical pressure supply plate

The individual compressed air supply of a single valve with a width of 20 mm can be realised using the vertical pressure supply plate VMPA2-VSP-

Right end plate (VMPA-ERP-G)

The air to be exhausted can be ducted using the right end plate with port 82/84 (VMPA-ERP-G).

Key features – Pneumatic components

Pilot air supply

The port for the main pneumatic supply is located on the pneumatic interface.

The ports differ for the following types of pilot air supply:

- Internal
- External

Internal pilot air supply

If the required working pressures are between 0.3 and 0.8 MPa, internal pilot air supply can be selected.

The pilot air supply is then branched from the working air 1 in the pneumatic interface using an internal connection. Port 12/14 is sealed with a blanking plug.

External pilot air supply

If the supply pressure is less than 0.3 MPa or greater than 0.8 MPa, you must operate your MPA valve terminal with external pilot air supply. In this case, the pilot air is additionally supplied via port 12/14 on the pneumatic interface.

Note

If a gradual pressure build-up in the system using a soft-start valve is chosen, an external pilot air supply should be connected so that the pilot pressure applied during switch-on is already very high.

Pilot air switching valve

The pilot air switching valve supplies the downstream valves in a pressure zone with pilot air (12/14). The pilot air switching valve can be used to implement the safety function “Protection against unexpected start-up”.

The compressed air to the pilot air switching valve can be supplied either internally via duct 1 of the valve terminal (or pressure zone) or externally via port 2 of the sub-base on which the pilot air switching valve is located.

In the case of internal pressure supply from duct 1, vacuum operation (in duct 1) is not possible.

When configuring the compressed air supply, please ensure that the pilot air switching valve has a working pressure of 0.3...0.8 MPa. Like all valves MPA, the pilot air switching valve has a manual override.

Pilot air switching valve

Internal pilot air supply

Normal position:

- Pressure is supplied via duct 1.
- Duct 2 on the sub-base is sealed with a blanking plug.
- Operating pressure of 0.3...0.8 MPa required in duct 1.
- In the normal position of the valve, duct 14 is exhausted to atmosphere via port 4 of the sub-base (silencer).

Switching status:

- In the switched position, duct 12/14 of the valve terminal is supplied with pressure from duct 1 via the pilot air switching valve.
- The integrated pressure sensor reports the presence of pressure in duct 12/14.

External pilot air supply

Normal position:

- Pressure is supplied via duct 2.
- The connection between duct 1 and the valve is closed.
- No restriction on the operating pressure in duct 1.
- In the normal position of the valve, duct 14 is exhausted to atmosphere via port 4 of the sub-base (silencer).

Switching status:

- In the switched position, duct 12/14 of the valve terminal is supplied with pressure from duct 2 via the pilot air switching valve.
- The integrated pressure sensor reports the presence of pressure in duct 12/14.

Key features – Pneumatic components

Supply plate

Additional supply plates can be used for larger terminals or to create pressure zones.

If several valves are to be operated simultaneously at full flow rate, it is recommended that a supply plate be positioned after every 8 valves (MPA1 or MPA14), or every 4 valves (MPA2).

Supply plates can be configured at any point upstream or downstream of sub-bases.

This applies to the following interfaces:

- MPA with CPX
- MPA with multi-pin plug connection
- MPA with AS-Interface connection
- MPA with CPI connection

MPA with ducted exhaust air

When using a right-hand end plate without port 82/84, it is essential that a supply plate for ducted exhaust air is used. Alternatively, an end plate with port 82/84 (VMPA-EPR-G) can be used for ducted exhaust air. In this case, no supply plate is required.

Supply plates contain the ports:

- Compressed air supply (1)
- Exhaust for the pilot air supply (82/84) and pressure compensation
- Exhaust air (3/5)

Depending on your order, the exhaust ducts are either ducted or exhausted via the flat plate silencer.

The supply plate is configured using the code letter U if no directly adjoining separating seal is required.

If a separating seal (S, T or R) is selected directly to the right or left of the supply plate, then the code letter V or W identifies the position of the left or right separating seal. The code for the separating seal (S, T or R) is placed in front of the code for the supply plate (V or W).

Supply plate (without exhaust plate)			
Code ¹⁾	Illustration	Type	Information
U		VMPA1-...-SP...	Supply plate without separating seal (no R, S or T selected)
V		VMPA1-...-SP...	Supply plate with separating seal on left, if R, S or T selected
W		VMPA1-...-SP...	Supply plate with separating seal on right, if R, S or T selected

1) Depending on the air supply code S, T, V, X, the supply plate is equipped with a silencer or an exhaust plate.

Key features – Electrical components

Electrical supply plate

Additional electrical supply plates can be used for larger terminals.

This enables up to 64 valve positions/128 solenoid coils to be supplied.

MPA with CPX

Electrical supply plates can be configured at any point upstream or downstream of sub-bases.

An electrical supply plate is required after 8 valve sub-bases.

MPA with CPI connection

Electrical supply plates can be configured at any point upstream or downstream of sub-bases.

An electrical supply plate is required after 8 valve sub-bases.

Note

Please note that only the electronics modules with a separate circuit are permitted to the right of the electrical supply plate.

The electrical supply plate must not be installed directly to the left of a pneumatic supply plate (type VMMA1-FB-SP...).

Note

For MPA with CPI connection, a maximum of 24 of the 32 MPA1 or MPA14 coils or 12 of the 16 MPA2 coils can be switched on simultaneously.

Key features – Pneumatic components

Creating pressure zones and separating exhaust air

MPA offers a number of options for creating pressure zones if different working pressures are required. Depending on the electrical interface, up to 16 pressure zones are possible. A pressure zone is created by isolating the internal supply ducts between the sub-bases using an appropriate separating seal or using a separator that is permanently integrated in the sub-base (code I or code III).

Compressed air is supplied and exhausted via a supply plate. The position of the supply plates and separating seals can be freely selected with the valve terminal MPA. Separating seals are integrated ex-works as per your order. Separating seals can be recognised by their coding, even when the valve terminal is assembled.

Note
The following must be taken into account for expansion or conversions at a later date:
Different separating seals are required for operating with ducted exhaust air and operation with flat plate silencers.

Port 12/14 on the pneumatic interface or the electrical interface (multi-pin) is equipped with a fitting for this purpose. The exhaust port 3/5 is exhausted via the corresponding ports. The exhaust air from port 82/84 is ducted via the right end plate (VMPA-EPR-G). In this case, there is no need for a power supply module for exhausting the ducted exhaust air 82/84. Separating seals can optionally be used to create pressure zones.

[1] Optional separating seal

Key features – Pneumatic components

Examples: compressed air supply and pilot air supply

Pilot air switching valve for internal pilot air supply

Pneumatic supply to the valve terminal with internal pilot air.

Second pressure zone with pilot air switching valve with internal pilot air supply: code IU, IS

The illustration on the right shows an example of the configuration and connection of the compressed air supply with internal pilot air supply. Port 12/14 on the pneumatic interface or on the electrical interface (multi-pin) and on the pilot air switching valve is tightly sealed. Exhaust ports 3/5 and 82/84 are exhausted via the appropriate connections. The separating seal is essential when using the pilot air switching valve. Pilot air supply for the pressure zone to the right of the pilot air switching valve can be individually switched off by the pilot air switching valve of duct 1 of this pressure zone.

- [1] Separating seal, specifically for pilot air switching valve with separation of duct 12/14
- [2] Pilot air switching valve for internal pilot air supply

Key features – Pneumatic components

Examples: compressed air supply and pilot air supply

Pilot air switching valve for external pilot air supply

Pneumatic supply to the valve terminal with external pilot air.

Second pressure zone with pilot air switching valve with external pilot air supply: code EU, ES

The illustration on the right shows an example of the configuration and connection of the compressed air supply in the case of external pilot air supply. Port 12/14 on the pneumatic interface or the electrical interface (multi-pin) is equipped with a fitting for this purpose. Exhaust ports 3/5 and 82/84 are exhausted via the appropriate connections. A separating seal with separation of duct 12/14 is essential when using the pilot air switching valve. Pilot air supply for the pressure zone to the right of the pilot air switching valve can be individually switched off by the pilot air switching valve. The pilot air switching valve obtains the compressed air supply for the pilot air from port 2 of the sub-base.

Key features – Pneumatic components

Sub-base

MPA is based on a modular system consisting of sub-bases and valves. The sub-bases are screwed together, thus forming the support system for the valves. They contain the ducts for supplying compressed air to and exhausting the valve terminal as well as the working

ports for the pneumatic drives for each valve. Each sub-base is connected to the next using three screws. Individual valve terminal sections can be isolated and further blocks can be inserted by loosening these screws. This ensures that

the valve terminal can be rapidly and reliably extended.

Key features – Pneumatic components

Pressure sensor

- [1] Red LED: pressure exceeded
- [2] Green LED: pressure maintained
- [3] Red LED: pressure not reached
- [4] Red LED: common error display

Using three LEDs, the pressure sensor indicates whether the applied pressure exceeds, conforms to or hasn't reached the setpoint value. An additional LED indicates common errors (limit exceeded or not reached). The limits for pressure monitoring are set through parameterisation. The pressure sensor plate can be parameterised via the PLC or the interface for CPX-FMT.

Alternatively the pressure in the exhaust duct (3/5) and the process pressure (external) can be measured. Pressure measurement in the exhaust duct is used for monitoring the operating pressure during reverse operation (supply to 3/5).

Pressure sensor versions

Code	Illustration	Type	Use
PE		VMPA-FB-PS-1	Monitoring the operating pressure in duct 1
PF		VMPA-FB-PS-3/5	Monitoring the pressure in exhaust ducts 3 and 5 (Monitoring the exhaust performance or pressure monitoring with reversibly operated valve terminal)
PG		VMPA-FB-PS-P1	Monitoring an external process pressure

Key features – Mounting

Valve terminal mounting

Sturdy terminal mounting via:

- Four through-holes for wall mounting
- Additional mounting brackets
- H-rail mounting

 **Note**

When wall mounting valve terminals MPA with more than 4 sub-bases, use additional mounting brackets type VMPA-BG-RW to prevent damage to the valve terminal. The mounting

brackets can be mounted on the pneumatic supply plates.

Wall mounting – Multi-pin plug connection, AS-Interface and CPI connection

The MPA valve terminal is screwed onto the mounting surface using four M4 or M6 screws. The mounting holes

are on the pneumatic interface and on the right end plate. Optional mounting brackets are also available.

Wall mounting – Fieldbus connection

The MPA valve terminal is screwed onto the mounting surface using six M4 or M6 screws. The mounting holes are on the left end plate (CPX) and on the right end plate MPA.

The pneumatic interface also provides further mounting holes as well as optional mounting brackets.

H-rail mounting

The valve terminal MPA is hooked onto the H-rail → arrow [1].

The valve terminal MPA is then swivelled onto the H-rail and secured in place with the clamping piece → arrow [2].

The following MPA mounting kit is required for H-rail mounting of the valve terminal:

- CPX-CPA-BG-NRH

This enables the valve terminal to be mounted on an H-rail to EN 60715.

 **Note**

More information about mounting solenoid valves on individual sub-bases can be found at → VMPA1

Key features – Display and operation

Display and operation

Every solenoid coil is allocated an LED that indicates its signal status.

- Indicator 12 shows the signal status of the coil for output 2
- Indicator 14 shows the signal status of the coil for output 4

Manual override

The manual override (MO) enables the valve to be switched when not electrically activated or energised.

The valve is switched by pushing the manual override. The set switching status can also be locked by turning the manual override (code R).

Alternatives:

- The cover cap (code N or as an accessory) prevents the manual override from being locked. The manual override can then only be activated by pushing it.
- The cover cap (code V or as an accessory) can prevent the manual override from being accidentally activated.

- The cover cap (code Y or as an accessory) can be used to operate the manual override in detenting mode without additional tools.

Pneumatic connection and control elements

- [1] Flat plate silencer for exhaust port 3/5
- [2] Manual override (for each pilot solenoid coil, non-detenting or non-detenting/detenting)
- [3] Adjusting knob for optional pressure regulator plate
- [4] Inscription label holder for sub-base
- [5] Working ports 2 and 4, per valve position
- [6] Supply port 1
- [7] Pressure gauge (optional)
- [8] Ports 12 and 14 for supplying the external pilot air

Note
A manually operated valve (manual override) cannot be reset electrically. Conversely, an electrically actuated valve cannot be reset using the mechanical manual override.

Electrical connection and display components on the AS-Interface

- [1] M12 socket for AS-Interface bus and additional supply (AS-i Out)
- [2] M12 plug for AS-Interface bus and auxiliary power supply (AS-i In)
- [3] Earth connection
- [4] Status LEDs for inputs
- [5] Status LEDs for AS-Interface
- [6] Diagnostic LEDs for valves

Key features – Display and operation

Manual override (MO)

MO with automatic return (non-detenting),

- [1] Press in the plunger of the MO with a pointed object or screwdriver. The pilot valve switches and actuates the main valve.
- [2] Remove the pointed object or screwdriver. The spring force pushes the plunger of the manual override back. The pilot valve returns to its normal position as does the single solenoid main valve (not the case with double solenoid valve code J).

MO with locking (detenting)

- [1] Press in the plunger of the MO with a pointed object or screwdriver until the valve switches and then turn the plunger clockwise by 90° until the stop is reached. The valve remains actuated
- [2] Turn the plunger anti-clockwise by 90° until the stop is reached and then remove the pointed object or screwdriver. The spring force pushes the plunger of the manual override back. The valve returns to its normal position (not with double solenoid valve code J).

MO with automatic return (non-detenting),

MO is actuated by pushing it with a pointed object or screwdriver and reset by spring force (detenting position prevented by coded cover cap). Valves can be ordered with a fitted cover cap in the valve terminal configurator using the selection menu “Manual override” (code N).

MO with lock – Assembly

Turn MO to clip it onto the pilot valve. The MO cap can then be operated (detenting) without tools. Valves can be ordered with a fitted cover cap in the valve terminal configurator using the selection menu “Manual override” (code N).

MO with lock – Actuation

Sliding the cap for the MO with latch in the direction of the arrow results in:

- Cap locks into the end position
- The pilot valve switches and actuates the main valve.

MO with lock – Actuation

Sliding the cap for the MO with latch in the direction of the arrow results in:

- Cap locks into the end position
- The spring force pushes the plunger of the manual override back.
- The pilot valve returns to its normal position as does the main single solenoid valve (not the case with double solenoid valve code J).

Key features – Display and operation

Inscription system

- [1] Inscription label holder ASLR-D-L1
- [2] Inscription label on the flat plate silencer of the pneumatic interface
- [3] Inscription labels IBS-6x10
- [4] Inscription label holder for sub-base VMPA...-ST-2-4, 4-fold, for IBS-6x10 inscription labels
- [5] Inscription label holder for sub-base VMPA...-ST-1-4, transparent, for paper foil labels

To label the valve, an inscription label holder VMPA1-ST-1-4 (for paper foil labels) or VMPA1-ST-2-4 (for inscription labels IBS-6x10) can be mounted on every sub-base size 10 or 20.

The sub-base for width 14 is wider. Separate inscription label holders VMPA14-ST-1-4 (for paper labels) or VMPA14-ST-2-4 (for inscription labels IBS-6x10) are therefore available for width 14.

The inscription label holder ASLR-D-L1 can be pushed onto the manual override. Inscription label holders/inscription labels that can be ordered individually → page 99.

As an alternative or in addition, large inscription labels can be applied to the flat plate silencer on the pneumatic interface. Labelling templates can be downloaded from the online portal: Additional information: www.festo.com/catalogue/mpa → Support/Downloads.

Key features – Electrical components

Electrical power as a result of current reduction

Each MPA solenoid coil is protected with a spark arresting protective circuit as well as against polarity reversal. In addition, all valve types have integrated current reduction.

MPA valves are supplied with operating voltage in the range 18 ... 30 V (24 V +/-25%). This high tolerance is made possible by the integrated control electronics and offers additional safety, e.g. in the case of a drop in operating voltage.

Individual valve

Valves on individual sub-bases can also be used for actuators that are further away from the valve terminal.

- Detachable electronics module with integrated holding current reduction
- Electrical M8 connection, 4-pin with screw connection

Note

More information about the individual valve interface can be found at → VMPA1

Electrical multi-pin plug connection

The following multi-pin plug connection is offered for the valve terminal MPA:

- Sub-D multi-pin plug connection (25-pin)

Pin 1 ... 24 are used for addresses 1 ... 24 in order.

If fewer than 24 addresses are used for the valve terminal, the remaining pins

to 24 are left free. Pin 25 is reserved for the neutral conductor. The valves are switched by positive or negative logic (PNP or NPN). Mixed operation is not permitted. Each pin on the multi-pin plug can actuate exactly one solenoid coil. If the maximum configurable number of valve positions is 24, this means that 24 valves can be addressed, each with a single solenoid coil.

With 12 or fewer valve positions, 2 solenoid coils per valve can be addressed. With 12 or more valve positions, the number of available valve positions for valves with two solenoid coils decreases.

Note

If a single solenoid valve is mounted on a double solenoid valve position, the second address is also occupied and cannot be used.

Guidelines on addressing for valves/solenoid coils

- The maximum possible number of addresses for multi-pin plug connection is 24.
- Each sub-base/electronics module occupies a specific number of addresses/pins:
 - Sub-base MPA1 for 4 single solenoid valves: 4
 - Sub-base MPA1 for 4 double solenoid valves: 8
 - Sub-base MPA2 for 2 single solenoid valves: 2
 - Sub-base MPA2 for 2 double solenoid valves: 4
- The addresses are numbered from left to right in ascending order. The following applies at the individual valve positions: address x for coil 14 and address x+1 for coil 12.
- If single solenoid valves are mounted on sub-bases for double solenoid valves, the address of coil 12 and the assigned pin will remain unused.

Key features – Electrical components

AS-Interface® fieldbus connection

The AS-Interface allows individual components or small component groups to be widely distributed in terms of space.

The AS-Interface connection of valve terminal MPA-S can be used to control up to 8 solenoid coils.

The electrical interface of the valve terminal contains the LEDs that indicate

the signal status and the protective circuit for the valves.

Note

More information can be found at
→ Internet: [as-interface](#)

CPI fieldbus connection

All CP valve terminals and CP modules are connected using a ready-to-install CP cable, and are attached to the CP interface. 4 modules, for example one CPV valve terminal and one to three CP

input modules, make up an installation string that ends at the CP interface. The installation system supports a maximum of 4 installation strings

that can be connected to a CP bus node.

Note

More information can be found at
→ Internet: [cpi](#)

Fieldbus connection CPX

All functions and features of the electrical peripherals CPX are permitted in connection with the CPX interface. This means that:

- The valves and electrical outputs are supplied via the operating voltage connection CPX
- The valves are supplied and switched off independently via a separate valve connection on the CPX (code V)

Note

More information can be found at
→ Internet: [cpx](#)

Key features – Electrical components

Instructions for use		
Operating materials	Bio-oils	Mineral oils
<p>Operate your system with unlubricated compressed air, if possible. Festo valves and cylinders are designed so that, if used as intended, they will not require additional lubrication and will still achieve a long service life. The quality of compressed air downstream of the compressor must correspond to that of unlubricated compressed air. If possible, do not operate the entire system with lubricated compressed air. The lubricators should, where possible, always be installed directly upstream of the actuator requiring them.</p>	<p>Incorrect additional oil and too high an oil content in the compressed air reduce the service life of the valve terminal.</p> <p>Use Festo special oil OFSW-32 or the alternatives listed in the Festo catalogue (as specified in DIN 51524 HLP32; basic oil viscosity 32 CST at 40°C).</p>	<p>When using mineral oils (e.g. HLP oils to DIN 51524, parts 1 to 3) or similar oils based on poly-alpha-olefins (PAO), the maximum residual oil content of 5 mg/m³ must not be exceeded (see ISO 8573-1 Class 4).</p> <p>A higher residual oil content is not permitted, regardless of the compressor oil, because the permanent lubrication would otherwise be flushed out over a period of time.</p>

Datasheet – Valve terminal

-  - Flow rate
 - MPA1: up to 360 l/min
 - MPA14: up to 670 l/min
 - MPA2: up to 850 l/min

-  - Voltage
 - 24 V DC

-  - Valve width
 - MPA1: 10 mm
 - MPA14: 14 mm
 - MPA2: 20 mm

General technical data

Valve terminal design	Modular, valve sizes can be mixed			
Electrical control	Fieldbus	Multi-pin plug	AS-i interface	CPI interface
Actuation type	Electrical			
Nominal voltage	[V DC]	24		
Operating voltage range	[V DC]	18 ... 30		
Residual ripple	[Vss]	4		
Max. no. of valve positions		64 (FB), 24 (MP)		
Valve size	[mm]	10, 14, 20		
Pilot air supply	Internal or external			
Lubrication	Life-time lubrication, PWIS-free (free of paint-wetting impairment substances)			
Type of mounting	Wall mounting On H-rail to EN 60715			
Mounting position	Any (wall mounting) Horizontal only (H-rail)			
Manual override	Non-detenting, detenting			
Protection rating to EN 60529	IP67 (for all types of signal transmission in assembled state)			
Pneumatic connections				
Pneumatic connection	Via sub-base or individual connection			
Supply port	1	G1/4 (M7 with individual sub-base)		
Exhaust port	3/5	QS-10, QS-3/8" (M7 with individual sub-base)		
Working ports	2/4	Dependent on the connection type selected MPA1: M7, QS4, QS6, 3/16", 1/4" MPA14: G1/8, QS6, QS8, 1/4", 5/16" MPA2: G1/8, QS6, QS8, 1/4", 5/16"		
Pilot air connection	12/14	M7 (M5 with individual sub-base)		
Pilot exhaust air port	82/84	M7 (M5 with individual sub-base and with end plate VMPE-EPR-G)		
Pressure compensation port	With ducted exhaust air: via port 82/84 (M5 with individual sub-base and with end plate VMPE-EPR-G) With flat plate silencer: exhausting to atmosphere

Datasheet

Operating and environmental conditions	
Operating medium	Compressed air to ISO 8573-1:2010 [7:4:4]
Note on operating/ pilot medium	Lubricated operation possible (in which case lubrication will always be required)
Operating pressure	[MPa] -0.09 ... 1
	[bar] -0.9 ... 10
Pilot pressure	[MPa] 0.3 ... 0.8
	[bar] 3 ... 8
Ambient temperature	[°C] -5 ... +50
Temperature of medium	[°C] -5 ... +50
Storage temperature ¹⁾	[°C] -20 ... +40
Relative humidity	Max. 90% at 40°C

1) Long-term storage

Certifications ¹⁾				
Type	MPA-MPM-VI (multi-pin plug interface)	MPA-FB-VI (fieldbus interface)	MPA-ASI-VI (AS-i interface)	MPA-CPI-VI (CPI interface)
Part number	539105	530411	546279	546280
ATEX category for gas	II 3 G			
Type of (ignition) protection for gas	Ex ec IICT4 Gc X			
ATEX ambient temperature	[°C] $-5 \leq T_a \leq +50$			
Explosion protection certification outside the EU	-	EPL Gc (BR)	-	-
Certificate-issuing authority	-	DNV 15.0193 X	-	-
CE marking (see declaration of conformity)	To EU EMC Directive ²⁾			
	To EU Explosion Protection Directive (ATEX)			
KC marking	KC EMC			
Certification	c UL us - Recognized (OL)			
	RCM			
Corrosion resistance class CRC ³⁾	1	1	0	0

1) Interface versions that are not listed do not have any of the listed certifications

2) For information about the area of use, see the EC declaration of conformity at: www.festo.com/catalogue/... → Support/Downloads.

If the devices are subject to usage restrictions in residential, commercial or light-industrial environments, further measures for the reduction of the emitted interference may be necessary.

Datasheet

Pilot pressure p2 as a function of working pressure p1 with external pilot air supply

For valves with code: M, J, B, G, E, W, X

For valves with code: N, K, H, D, I

Pilot pressure p2 as a function of working pressure p1 for valves with mechanical spring return

For valves in width 10 mm with code: MS, NS, KS, HS, DS

For valves in width 20 mm with code: MS, NS, KS, HS, DS

For valves in width 10 mm with code: MU, NU, KU, HU

Datasheet

Flow rate q_n as a function of output pressure p_2 with pressure regulator plates (width 20 mm)

(P regulator plate) for port 1

Supply pressure 10 bar,
regulated pressure set at 6 bar

(B regulator plates) for port 2

Supply pressure 10 bar,
regulated pressure set at 6 bar

Flow rate q_n as a function of output pressure p_2 with pressure regulator plates (width 20 mm)

(A regulator plates) for ports 4

Supply pressure 10 bar,
regulated pressure set at 6 bar

(B regulator plates, rev.) for ports 3, reversible

Supply pressure 10 bar,
regulated pressure set at 6 bar

Flow rate q_n as a function of output pressure p_2 with pressure regulator plates (width 20 mm)

(A regulator plates, rev.) for ports 5, reversible

Supply pressure 10 bar,
regulated pressure set at 6 bar

Shock resistance		Shock test with severity level 2 to FN 942017-5 and EN 60068-2-27		
Vibration resistant		Transport application test with severity level 2 to FN 942017-4 and EN 60068-2-6		

Datasheet

Electrical data – MPA with electronics module VMPA...-FB... (CPX terminal, CPI interface)			
	MPA1	MPA14	MPA2
Intrinsic current consumption per electronics module			
At 24 V U _{EL/SEN} ¹⁾ (internal electronics, all outputs 0-signal)	[mA]	Typically 8	
At 24 V U _{val} ²⁾ (internal electronics, without valves)			
VMPA...-EMG..., separate circuits	[mA]	Typically 23	
VMPA...-EMS..., without separate circuits	[mA]	Typically 3	
Maximum current consumption per solenoid coil at nominal voltage			
Nominal pick-up current	[mA]	58	99
Nominal current following current reduction	[mA]	9	18
Time until current reduction	[ms]	24	24
Diagnostic message			
Undervoltage U _{AUS} ³⁾	[V]	17.5 ... 16	

Electrical data – MPA with electronics module VMPA...-MPM... (AS-Interface, multi-pin)			
	MPA1	MPA14	MPA2
Current consumption at Sub-D multi-pin plug connection per solenoid coil at nominal voltage			
Nominal pick-up current	[mA]	80	100
Nominal current with current reduction	[mA]	25	20
Time until current reduction	[ms]	25	50

Calculation example for current consumption (CPX terminal, CPI interface)		
Current consumption with two solenoid coils MPA2 switched in parallel and one electronics module VMPA...-EMS... without separate circuits	[mA]	I _{EL/SEN} = 8
Nominal pick-up current (duration 24 ms)	[mA]	I _{VAL} = 3 (intrinsic current consumption of electronics module) + 2 x 99 (MPA2) = 202
Nominal current with current reduction (after 24 ms)	[mA]	I _{VAL} = 3 (intrinsic current consumption of electronics module) + 2 x 18 (MPA2) = 39

- 1) Power supply for electronics and sensors
- 2) Load voltage supply for valves
- 3) Load voltage outside of function range

Vertical stacking components, regulator plate VMPA1

Type	H1	L1	L2	L3
VMPA1-...	105	151.1	122.3	26.9

Vertical stacking components, regulator plate VMPA2

Type	H1	L1	L2	L3
VMPA2-...	152	179.6	131.6	26.9

Datasheet – Proportional pressure regulator VPPM

Function:

-  - Flow rate
380 ... 1650 l/min
-  - Pressure regulation ranges
0.02 ... 10 bar
-  - Voltage
21.6 ... 26.4 V DC

General technical data

		VPPM-6TA	VPPM-8TA
Valve function		3-way proportional pressure regulator	
Design		Piloted diaphragm regulator	
Range of applications		For CPI connection, for fieldbus	
Type of mounting		Via through-hole or accessories	
Sealing principle		Soft	
Actuation type		Electrical	
Type of control		Piloted	
Mounting position		Any	
Reset method		Mechanical spring	
Display type		LED	Back-lit LCD
Pneumatic connection	1, 2, 3	Sub-base	
Nominal width	Pressurisation [mm]	6	8
	Exhausting [mm]	4.5	7
Standard nominal flow rate	2 bar type [l/min]	380	450
	6 bar type [l/min]	900	1050
	10 bar type [l/min]	1400	1650
Product weight	[g]	400	500
Material	Housing	Anodised wrought aluminium alloy	

Electrical data

Electrical connection		Via E-box
Operating voltage range	[V DC]	21.6 ... 26.4
Residual ripple	[%]	10
Max. electrical power consumption	[W]	7
Duty cycle	[%]	100
Short circuit current rating		For all electrical connections
Reverse polarity protection		For all electrical connections
Protection rating to EN 60529		IP65

-  - **Note**
Output pressure will be unregulated if there is a break in the power supply cable.

-  - **Note**
Note possible restrictions for the IP protection class
→ ATEX declaration of conformity

	VPPM-...-0L6H-...	[bar]	0.03	
	VPPM-...-0L10H-...	[bar]	0.05	
Linearity error FS (full scale)	Standard	[%]	2	
	Type S1	[%]	1	
Repetition accuracy FS (full scale)		[%]	0.5	
Temperature coefficient		[%/K]	0.04	
Ambient temperature		[°C]	0 ... 60	0 ... 50
Temperature of medium		[°C]	10 ... 50	
Corrosion resistance class CRC ²⁾			2	
KC marking			KC EMC	
CE marking (see declaration of conformity) ⁴⁾			To EU EMC Directive ³⁾	
			To EU RoHS Directive	
UKCA marking (see declaration of conformity) ⁴⁾			To UK EMC regulations ³⁾	
			To UK RoHS regulations	
Certification			RCM	
			c UL us - Listed (OL)	
Certificate-issuing authority			UL E322346	
LABS (PWIS) conformity			VDMA24364-B1/B2-L	

1) Input pressure 1 should always be 1 bar greater than the maximum regulated output pressure.

2) More information: www.festo.com/x/topic/crc

3) For information about the area of use, see the EC declaration of conformity at: www.festo.com/catalogue/... → Support/Downloads.

If the devices are subject to usage restrictions in residential, commercial or light-industrial environments, further measures for the reduction of the emitted interference may be necessary.

4) More information: www.festo.com/catalogue/... → Support/Downloads.

Designation						
End plate and fieldbus pneumatic interface						
	End plate, right	with port 82/84 for ducted exhaust air (M5 connecting thread)	–	8029133	VMPA-EPR-G	
		Without port 82/84	–	533373	VMPA-EPR	
	Pneumatic interface	Ducted exhaust air, internal pilot air	For CPX plastic interlinking block		533370	VMPA-FB-EPL-G
			For CPX metal interlinking block		552286	VMPA-FB-EPLM-G
		Ducted exhaust air, external pilot air	For CPX plastic interlinking block		533369	VMPA-FB-EPL-E
			For CPX metal interlinking block		552285	VMPA-FB-EPLM-E
		Flat plate silencer, internal pilot air	For CPX plastic interlinking block		533372	VMPA-FB-EPL-GU
			For CPX metal interlinking block		552288	VMPA-FB-EPLM-GU
	Flat plate silencer, external pilot air	For CPX plastic interlinking block		533371	VMPA-FB-EPL-EU	
		For CPX metal interlinking block		552287	VMPA-FB-EPLM-EU	
Electrical interface for AS-Interface						
	4 inputs/4 outputs, to spec. 2.1	Internal pilot air	Ducted exhaust air	546989	VMPA-ASI-EPL-G-4E4A-Z	
			Silencer	546991	VMPA-ASI-EPL-GU-4E4A-Z	
		External pilot air	Ducted exhaust air	546988	VMPA-ASI-EPL-E-4E4A-Z	
			Silencer	546990	VMPA-ASI-EPL-EU-4E4A-Z	
	8 inputs/8 outputs, to spec. 2.1	Internal pilot air	Ducted exhaust air	546993	VMPA-ASI-EPL-G-8E8A-Z	
			Silencer	546995	VMPA-ASI-EPL-GU-8E8A-Z	
		External pilot air	Ducted exhaust air	546992	VMPA-ASI-EPL-E-8E8A-Z	
			Silencer	546994	VMPA-ASI-EPL-EU-8E8A-Z	
	8 inputs/8 outputs, to spec. 3.0, expanded addressing range	Internal pilot air	Ducted exhaust air	573184	VMPA-ASI-EPL-G-8E8A-CE	
			Silencer	573186	VMPA-ASI-EPL-GU-8E8A-CE	
		External pilot air	Ducted exhaust air	573183	VMPA-ASI-EPL-E-8E8A-CE	
			Silencer	573185	VMPA-ASI-EPL-EU-8E8A-CE	
Manifold block for AS-Interface						
	Socket M12, 5-pin			195704	CPX-AB-4-M12X2-5POL	
	M8 socket, 3-pin			195706	CPX-AB-8-M8-3POL	
	Spring-loaded terminals, 32-pin			195708	CPX-AB-8-KL-4POL	
	Socket, Sub-D, 25-pin			525676	CPX-AB-1-SUB-BU-25POL	
Electrical interface for CPI						
	External pilot air	Ducted exhaust air		546983	VMPA-CPI-EPL-E	
		Silencer		546985	VMPA-CPI-EPL-EU	
	Internal pilot air	Ducted exhaust air		546984	VMPA-CPI-EPL-G	
		Silencer		546986	VMPA-CPI-EPL-GU	
Electrical interface for multi-pin plug connection						
	External pilot air	Ducted exhaust air		540893	VMPA1-MPM-EPL-E	
		Silencer		540895	VMPA1-MPM-EPL-EU	
	Internal pilot air	Ducted exhaust air		540894	VMPA1-MPM-EPL-G	
		Silencer		540896	VMPA1-MPM-EPL-GU	

Accessories
