# IP 20 distributed inputs/outputs

Distributed I/O system for network or fieldbus  
Advantys™ OTB

<b>Applications</b>	<b>Data exchange between a control source (PLC, variable speed drives, PC, etc.) and the inputs and outputs</b>
<b>Type of bus or network</b>	Ethernet TCP/IP network

<b>Nature of bus or network</b>	Mixed local industrial network	
<b>Structure</b>	Physical interface	10/100 BASE-T
	Access method	CSMA-CD
	Transfer rate	10/100 Mbits/s

<b>Medium</b>	Shielded dual twisted pair via Ethernet ConneXium cabling system	
<b>Configuration</b>	Number of devices	256 max. per network segment. Unlimited using switches.
	Maximum length (distance)	500 m (1640.4 ft.) according to standard 802.3 1000 m (3280.8 ft.) with ConneXium cabling system
<b>Digital inputs/outputs</b>	Number of I/O	20 I/O
	Number of inputs	12, 24 V $\overline{\text{sink}}$ /source (PNP or NPN) inputs
	Number of outputs	6 relay outputs and 2, 24 V $\overline{\text{sink}}$ transistor, source (PNP) outputs ♦

<b>Type of connection</b>	Removable screw terminal blocks
---------------------------	---------------------------------

<b>Input/output expansion</b>	Number of expansion modules	7 digital or analog input/output modules, or connection accessories
	Maximum I/O configuration	With interface module: - 132 with screw terminal I/O expansion module - 244 with type HE10 connector I/O expansion module - up to 48 analog I/O (24 input channels and 24 output channels)

<b>Supply voltage</b>	24 V $\overline{\text{sink}}$ supply
-----------------------	--------------------------------------

<b>Integrated I/O functions</b>	Counting, 5 kHz	2 channels, 32 bits (0...4,294,967,296 points) - dedicated digital inputs - up/down counting with preset value
	Counting, 20 kHz	2 channels, 32 bits (0...4,294,967,296 points) - dedicated digital inputs/outputs - up/down counting, up counting, down counting, frequency meter
	Pulse generator, 7 kHz	2 PWM function channels (output with pulse width modulation) and PLS function (pulse generator output)

<b>Type</b>	<b>OTB 1E0 DM9LP</b>
-------------	----------------------

<b>Page</b>	10
-------------	----

♦ For sink (NPN) outputs, see the expansion modules starting on page 10.

**Data exchange between a control source (PLC, variable speed drives, PC, etc.) and the inputs and outputs**

CANopen bus	Modbus Serial network
-------------	-----------------------

CAN fieldbus	Local RS 485 network
ISO 11898 (SUB-D 9-pin connector)	RS 485 (2 x RJ 45 connectors in parallel)
CSMA-MA, multimaster	Master-slave
10...1000 Kbits/s depending on distance	1.2...38.4 kbauds

Shielded dual twisted pair	Dual twisted pair
127 slaves	32 slaves per segment
From 30 m / 98.4 ft. (1 Mbits/s) to 1000 m / 3280.8 ft. (> 50 Kbits)	Up to 1000 m (3280.8 ft.)

20 I/O
12, 24 V $\bar{\text{---}}$ sink/source (PNP or NPN) inputs
6 relay outputs and 2, 24 V $\bar{\text{---}}$ transistor, source (PNP) outputs $\blacklozenge$

Removable screw terminal blocks

7 digital or analog input/output modules, or connection accessories

With interface module:  
 - 132 with screw terminal I/O expansion module  
 - 244 with type HE10 connector I/O expansion module  
 - up to 48 analog I/O (24 input channels and 24 output channels)

24 V  $\bar{\text{---}}$  supply

2 channels, 32 bits (0...4,294,967,296 points)  
 - dedicated digital inputs  
 - up/down counting with preset value  
 2 channels, 32 bits (0...4,294,967,296 points)  
 - dedicated digital inputs/outputs  
 - up/down counting, up counting, down counting, frequency meter  
 2 PWM function channels (output with pulse width modulation) and PLS function (pulse generator output)

## Presentation

There is an increasing tendency for machine manufacturers to design their automation systems using modular architectures. The use of inputs/outputs (I/Os) is becoming more and more common. The Advantys OTB offer is an ideal solution for “optimized” type distributed input/output requirements. This offer, complementing the Advantys interface family, has been designed to provide the right technical-economical balance and to meet the needs of machine manufacturers and users seeking the best compromise between size, ease of cabling, setting-up and costs. Open and modular, the Advantys OTB solution enables the creation of industrial I/O islands managed by a master controller (PLC, PC or variable speed drive) via a fieldbus or communication network.

With its expandable block type architecture, the Advantys OTB solution adapts to all configurations of automation system islands. The Advantys OTB offer is particularly economical for small and medium size islands. In addition, the optimized sizes of this offer are ideally suited to the size of enclosures for distributed I/Os that are located as near to the machine as possible. This solution reduces cabling time and costs and, at the same time, takes into account the modular architecture of the machine.

Furthermore, the Advantys OTB offer proposes fewer references relating to spare parts and accessories that are required for creating an island.

The Advantys OTB offer has also been designed to be as simple as possible. This offer includes 3 communication bases (interface modules) for the various types of network or fieldbus: CANopen, Ethernet TCP/IP or Modbus RS 485 Serial Line. Inputs and outputs are directly integrated in the interface modules. Each base incorporates 20 I/O:

- 12, 24 V  $\bar{}$  inputs,
- 6 relay outputs,
- 2, 24 V  $\bar{}$  solid-state outputs.

All the bases use a 24 V  $\bar{}$  supply. Of monobloc design, each Advantys OTB interface module can be fitted with expansion modules.

With its range of I/O expansions, the Advantys OTB offer provides a modularity that allows all requirements to be met, commencing with a base that can be fitted with up to 7 digital or analog I/O modules. The expansion modules, like the interface modules, simply clip-on to 35 mm (1.37") symmetrical rail and enable configurations of up to 132 digital I/O and up to 48 analog I/O channels, or a mixture of both types (within the limit of 7 expansion modules), to be obtained.

Sensors and actuators are connected to the interface modules and I/O expansion modules using removable screw terminal blocks. All Advantys OTB modules provide an IP 20 degree of protection. To simplify sensor and actuator connections, as well as linking commons, the Advantys OTB offer also includes a commoning module. This module, as with all the other modules of the Advantys OTB range, allows the through connection of the internal bus or network (passively in this case) and enables connection of the commons in two isolated groups for each commoning module.

## Description

The Advantys OTB 1●0 DM9LP (1) interface modules comprise:

- 1 An access door to the speed and network address coding wheels.
- 2 A connector for expansion modules (right-hand side).
- 3 Three coding wheels (depending on model) for island address and bus or network communication speed adjustment.
- 4 Indicator lights (communication status and I/O states).
- 5 Screw terminal connectors for connection of inputs/outputs.
- 6 Connectors for connection of bus or communication network.
- 7 Terminals for connection of 24 V  $\bar{}$  supply.

Mounting: the interface modules mount on 35 mm (1.37") symmetrical rail.

(1) Only the communication part is dedicated to each fieldbus or network and can differ. The general description remains the same.

## Environmental characteristics

<b>Product certifications</b>			cULus, CE
<b>Temperature</b>	Operation	°C	0...+55 ° (32...+131 °F)
	Storage	°C	-25...+70 ° (-13...+158 °F)
<b>Relative humidity</b>			30...95%, without condensation
<b>Degree of protection</b>			IP 20
<b>Altitude</b>	Operation	m	0...2000 (0...6562 ft)
	Storage	m	0...3000 (0...9843 ft)
<b>Vibration resistance</b>		<b>Hz</b>	10...57, amplitude 0.075 mm (0.00024"), acceleration 57...150 Hz
		<b>m/s<sup>2</sup></b>	9.8 (1 gn)
<b>Shock resistance</b>		<b>m/s<sup>2</sup></b>	147 (15 gn), for 11 ms
<b>Resistance to electrostatic discharge</b>	Conforming to IEC 61000-4-2	<b>kV</b>	4 on contact, 8 in air
<b>Resistance to radiated fields</b>	Conforming to IEC 61000-4-3	<b>V/m</b>	10
<b>Immunity to fast transient voltages</b>	Conforming to IEC 61000-4-4	<b>kV</b>	0.5 for the I/Os, 1 for the 24 V $\pm$ supply
<b>Mounting</b>			On 35 mm (1.37") symmetrical rail

## Interface module characteristics

Interface module type			OTB 1E0 DM9LP	OTB 1C0 DM9LP	OTB 1S0 DM9LP
<b>Type of bus/network</b>			Ethernet TCP/IP Modbus	CANopen	Modbus RS 485 Serial line

Input characteristics			
Number of input channels			12
Nominal input voltage		V $\equiv$	24, sink or source (positive or negative logic, PNP or NPN)
Common			1
Input voltage limits		V $\equiv$	20.4...26.4
Nominal input current		mA	5 for I0 and I1, I6 and I7; 7 for the others
Input impedance		k $\Omega$	5.7 for I0 and I1, I6 and I7; 4.7 for the others
Filtering time	At state 1	$\mu$ s	35 for I0 and I1, I6 and I7; 40 for the others
	At state 0	$\mu$ s	45 for I0 and I1, I6 and I7; 150 for the others
Programmable filtering time		ms	Electronic filtering time - 3 or 12 depending on configuration
Isolation			No isolation between channels, isolation with internal logic using photocouplers

Transistor output characteristics (solid-state)			
Number of output channels			2
Output logic			Source (positive logic, PNP)
Common			1
Nominal output values	Voltage	V $\equiv$	24
	Current	A	0.3
Output value limits	Voltage	V $\equiv$	20.4...28.8
	Current per channel	A	0.36
	Current per common	A	0.72
Response time	At state 1	$\mu$ s	5 for Q0 and Q1; 300 for other outputs
	At state 0	$\mu$ s	5 for Q0 and Q1; 300 for other outputs
Voltage drop (voltage at state 1)		V $\equiv$	1 max.
Maximum inrush current		A	1
Leakage current		mA	0.1
Induction L/R		ms	10 (28.8 V $\equiv$ , 1 Hz)
Overvoltage protection		V $\equiv$	39 $\pm$ 1
Maximum power (filament lamp)		W	8
Isolation		$\sim$ ms	500 (no isolation between channels, isolation with internal logic using photocouplers)

Relay output characteristics			
Number of output channels			6
Commons	Common 1		3 contacts (relay) NO
	Common 2		2 contacts (relay) NO
	Common 3		1 contact (relay) NO
Nominal output values (1) (resistive or inductive load)	Voltage	V $\equiv$	30
		V $\sim$	240
	Current per channel	A	2
	Current per common	A	8
Minimum switchable load		mA/V $\equiv$	0.1 (reference value)
Contact resistance (unused condition)		m $\Omega$	30 max.
Insulation voltage (rms)		V $\sim$	1500 for 1 minute
Consumption for all the outputs	At state 1	5 V $\equiv$	30
		24 V $\equiv$	40
	At state 0	5 V $\equiv$	5
Electrical durability			AC-1: 10 <sup>5</sup> operating cycles with 500 VA load AC-14: 10 <sup>5</sup> operating cycles with 250 VA load AC-15: 10 <sup>5</sup> operating cycles with 200 VA load DC-1: 10 <sup>5</sup> operating cycles with 60 W load DC-13: 10 <sup>5</sup> operating cycles with 30 W load

Commoning block characteristics			
Commoning block type			OTB 9ZZ 61JP
Application			Passive, inter-module
Commons			2 groups of 10 terminals
Nominal output values (1) (resistive or inductive load)	Voltage	V $\equiv$	19...30
		V $\sim$	215...240
	Current per channel	A	2
	Current per group of commons	A	8

(1) With 1800 operations max./hour:  
- electrical life: 100,000 operations min.,  
- mechanical life: 20 x 10<sup>6</sup> operations min.

### Presentation

The range of Twido I/O modules includes input modules, output modules and mixed input/output modules. With the 15 I/O modules offered, in addition to the I/O integrated in 24 I/O compact base controllers and modular base controllers, configurations can be adapted to best suit application requirements, so optimizing costs. The following discrete I/O modules are available :

- 1, 120 V ~ discrete input module, 8 channels, fitted with a removable screw terminal block.
- 4, 24 V = discrete input modules comprising an 8-channel module, two 16-channel modules and a 32-channel module, equipped with either removable screw terminal blocks or HE 10 type connector, depending on the model. These modules can be either "sink or source".
- 8 discrete output modules comprising two output modules with 8 and 16 relay outputs, three output modules with 8, 16 or 32-channel "sink" transistor outputs and three output modules with 8, 16 or 32-channel "source" transistor outputs, equipped with either removable screw terminal blocks or HE 10 type connector, depending on the model.
- 2 discrete mixed input and output modules, comprising one 4-channel input/4-channel relay output module with removable screw terminal block and one 16-channel input/8-channel relay output module with non-removable spring terminal block.

The narrow width of these I/O modules, 17.5 mm (0.68"), 23.5 mm (0.92"), 29.7 mm (1.17") or 39.1 mm (1.54") makes it possible to build Twido configurations of up to 264 I/O with a minimal overall size of L 255.4 mm (10.0") x H 90 mm (3.54") x D 81.3 mm (3.2).

All these discrete I/O modules and the analog I/O modules are connected to the base controller by stacking them on a rail, starting from the right-hand side panel of the base controller, according to the following rules :

- For 24 I/O compact base controllers TWD LC●A 24DRF: 4 modules max. (see characteristics 18).
- For 40 I/O compact base controllers TWD LCA● 40DRF: 7 modules max. (see characteristics 18).
- For 20 I/O modular base controllers TWD LMDA 20D●K: 4 modules max. (see characteristics 29).
- For 20 and 40 I/O base controllers TWD LMDA 20DRT/40D●K: 7 modules max. (see characteristics 29).

All the discrete I/O modules are electrically isolated with the use of a photocoupler between the internal electronic circuit and the input/output channels.

### Description

Twido discrete I/O modules comprise :

- 1 An extension connector for electrical connection to the previous module (1).
- 2 One or two blocks for displaying the channels and module diagnostics.
- 3 One or two connection components of varying type, depending on the model :
  - removable screw terminal block (1 or 2) for modules whose reference ends in T,
  - HE 10 type connector (1 or 2) for modules whose reference ends in K,
  - non-removable spring terminal block for module TWD DMM 24DRF.
- 4 Latching mechanism for attachment to the previous module.

These modules are mounted on a symmetrical rail. Fixing kit TWD XMT 5 (supplied in lots of 5) allows plate or panel mounting. For modules with removable screw terminal block, the terminal blocks are supplied with the module.

(1) A connector on the right-hand side panel ensures continuity of the electrical link with the next I/O module.

Module with removable screw terminal block

Module with HE 10 type connector

General characteristics			
Temperature	°C	Operation : 0...+ 55 (32...+ 131 °F) Storage : - 25...+ 70 (-13...+ 158 °F)	
Relative humidity		30 to 95 %, without condensation	
Degree of protection		IP 20	
Altitude	m	Operation : 0...2000 (0...6562 ft) Storage : 0...3000 (0...9843 ft)	
Vibration resistance	Mounted on rail	Hz	10...57, amplitude 0.075 mm, acceleration 57...150 Hz
		m/s <sup>2</sup>	9.8 (1 gn)
	Plate or panel mounted (using fixing kit TWD XMT 5)	Hz	2...25, amplitude 1.6 mm, acceleration 25...100 Hz
		m/s <sup>2</sup>	39.2 (4 gn)
Shock resistance		m/s <sup>2</sup>	147 (15 gn) for 11 ms

### Presentation

Twido analog I/O expansion modules enable the acquisition of various analog values encountered in industrial applications.

Analog output modules are used to control the preactuators in devices such as variable speed drives, valves and applications that require process control. The output current or voltage is proportional to the numerical value defined by the user program. When the Twido controller stops, the outputs can be configured with fallback (reset to the lowest scale value or hold the last value received). This function, when set to 'hold', is useful when debugging the application or when a fault occurs, in order not to disturb the process being controlled.

The 8 following analog I/O modules are available:

- One module with 2 inputs: 0...10 V, 4...20 mA.
- One module with 4 inputs: 0...10 V, 0...20 mA, Pt 100/1000, Ni100/1000 range 50...150 °C (122...302 °F).
- One module with 8 inputs: 0...10 V, 0...20 mA.
- One module with 8 inputs: PTC/NTC.
- One module with 1 output: 0...10 V, 4...20 mA.
- One module with 2 outputs: ± 10 V.
- One mixed module with 2 inputs: 0...10 V, 4...20 mA and 1 output: 0...10 V, 4...20 mA.
- One mixed module with 2 thermocouple or temperature probe inputs and one 0...10 V, 4...20 mA output.

Twido analog extension modules offer a resolution of 10 bits, 11 bits + sign and 12 bits, with connection by removable screw terminal block. An external 24 V  $\square$  power supply is required for each analog module.

Like discrete I/O modules, analog I/O modules are connected to the base controller by stacking them on a  $\square$  rail, starting from the right-hand side panel of the base controller, according to the following rules:

- For 24 I/O compact base controllers TWD LC●A 24DRF: 4 modules max. (see characteristics page 18).
- For 40 I/O compact base controllers TWD LC●A 40DRF: 7 modules max. (see characteristics page 18).
- For 20 I/O modular base controllers TWD LMDA 20D●K: 4 modules max. (see characteristics page 29).
- For 40 I/O modular base controllers TWD LMDA 20DRT/40D●K: 7 modules max. (see characteristics page 29).

All analog I/O modules are electrically isolated with the use of a photocoupler between the internal electronic circuit and the input/output channels

### Description

Twido analog I/O modules comprise:

- 1 An extension connector for electrical connection to the previous module (1).
- 2 A block for displaying the channel and module diagnostics.
- 3 A removable screw terminal block for connection of the 24 V  $\square$  external power supply, the sensors and the preactuators.
- 4 A latching mechanism for attachment to the previous module.

These modules are mounted on a symmetrical  $\square$  rail. Fixing kit TWD XMT 5 (supplied in lots of 5) allows plate or panel mounting.

(1) A connector on the right-hand side panel ensures continuity of the electrical link with the next I/O module.

General characteristics

### References

These analog I/O expansion modules are mounted on symmetrical  $\bar{L}$  rails to the right of the Twido base controller. The sensors/preactuators are connected to a removable screw terminal block (supplied with each module). The maximum number of I/O and/or analog modules which may be mounted depends on the type of base controller:

Type of TWD controller	LC●A 10DRF	LC●A 16DRF	LC●A 24DRF	LC●A 40DRF	LMDA 20D●K	LMDA 20DRT	LMDA 40D●K

# Connection interfaces

## Advantys™, Telefast® pre-wired system for Twido®

### I/O connection sub-bases

#### Presentation

Relay and connection functions, with or without polarity distribution, significantly reduce wiring time and eliminate the risk of error.

The AdvantysTelefast pre-wired system allows fast, reliable and economical remote connection of I/O modules (24 V  $\text{---}$  discrete) to operative parts, partly eliminating the single-wire connection and intermediate terminal blocks.

The Telefast system can only be connected to Twido modules equipped with HE 10 type connectors. It consists of connecting cables and interface sub-bases.

The Telefast range is suitable for all types of connection found in control system devices:

- I/O located in the PLC cabinet,
- I/O located directly on the machine or in auxiliary enclosures.

All the I/O connection sub-bases comprise output terminals on 2 rows :

- 1<sup>st</sup> row: connection of the signal,
- 2<sup>nd</sup> row: connection of its common
- 24 V  $\text{---}$  for the inputs,
- 0 V for the outputs.

A 3<sup>rd</sup> row of optional terminals ABE 7BV●● may be added for connection of another common.

These I/O sub-bases are available in different configurations:

#### Sub-bases for Twido modular base controllers

- **ABE 7B20MPN20**: sub-base with 12 inputs + 8 passive outputs.
- **ABE 7B20MPN22**: sub-base with 12 inputs + 8 passive outputs.
  - individual fuse protection for each output (0.315 A),
  - LED indication,
  - blade disconnecter for the 0 V common.
- **ABE 7B20MRM20**: sub-base with 12 inputs + 8 outputs with soldered relays
  - 2 A solid state relay (1 x 4 A common/2 channels) on 2 outputs,
  - electromechanical relays (1N/O 24 V  $\text{---}$  / 250 V  $\sim$ , 3 A) on 6 outputs for adaptation of the current or voltage signal (1 x 10 A common/6 channels).

#### Sub-bases for Twido extension modules

- **ABE 7E16EPN20**: sub-base with 16 passive inputs.
- **ABE 7E16SPN20**: sub-base with 16 passive outputs.
- **ABE 7E16SPN22**: sub-base with 16 passive outputs.
  - individual fuse protection for each output (0.315 A),
  - LED indication
  - blade disconnecter for breaking the 0 V common.
- **ABE 7E16SRM20**: sub-base with 16 soldered relay outputs
  - electromechanical relays (1N/O 24 V  $\text{---}$  / 250 V  $\sim$ , 3 A) on 16 outputs for adapting the current or voltage signal (1 x 5 A common/4 channels)

#### Optional terminal blocks

- **ABE 7BV20TB**
  - 12 shunted screw terminals for the input common,
  - 8 shunted screw terminals for the output common.
- **ABE 7BV20**
  - 20 shunted screw terminals for connection of a single common.

I/O connection sub-bases

## Description

Connection sub-bases ABE 7B20M●●●●, ABE 7E16SRM20 and ABE 7E16SPN22

- 1 HE 10 connector (20-way for ABE 7E16●●●●●, 26-way for ABE 7B20●●●●●).
- 2 Fuse for the 24 V  $\text{---}$  supply circuit.
- 3 Rail mounting.
- 4 LED for channel indication (only on ABE 7B20MPN22 and ABE 7E16SPN22).
- 5 24 V  $\text{---}$  power supply terminal block.
- 6 Blade disconnecter on 0 V  $\text{---}$  (only on ABE 7B20MPN22 and ABE 7E16SPN22).
- 7 Legend holder cover: customer marking on outside and sub-base wiring scheme on inside, providing access to fuses per channel (only on ABE 7B20MPN22 and ABE 7E16SPN22).
- 8 Test point for  $\varnothing$  2.3 mm (0.09") plug.
- 9 Upper terminal block for connection of signals.
- 10 Lower terminal block for connection of commons.
- 11 Optional snap-on terminal block with 20 screw terminals.

## Connection sub-bases ABE 7E16EPN20 and ABE 7E16SPN20

- 1 HE 10 connector, 20-way,
- 2 Fuse for the 24 V  $\text{---}$  supply circuit.
- 3 Rail mounting.
- 4 24 V  $\text{---}$  power supply terminal block.
- 5 Test point for  $\varnothing$  2.3 mm (0.09") plug.
- 6 Upper terminal block for connection of signals.
- 7 Lower terminal block for connection of commons.
- 8 Optional snap-on terminal block with 20 screw terminals.

Pre-wired solutions

## Presentation (continued)

- 1 Modular base controller with 26-way HE 10 connectors. The modular sizes available are 20 or 40 I/O.
- 2 Input and output modules with 20-way HE 10 connectors. The modular sizes available are 16 or 32 I/O.
- 3 Cable (ABF T26B●●●) equipped with a 26-way HE 10 connector at each end. This cable is available in 0.5, 1 and 2 metre lengths (AWG 28/0.08 mm<sup>2</sup>).
- 4 Cable (ABF T20E●●●) equipped with a 20-way HE 10 connector at each end. This cable is available in 0.5, 1, 2 and 3 metre lengths (AWG 28/0.08 mm<sup>2</sup>).
- 5 20 channel sub-base (ABE 7B20MPN2● or ABE 7B20MR20) for modular base controllers.
- 6 16 channel sub-base (ABE 7E16SPN22 or ABE 7E16SRM20) for output extension modules.
- 7 16 channel sub-base (ABE 7E16EPN20 or ABE 7E16SPN20) for input or output extension modules.

## Dimensions

ABE 7B20MPN20, ABE 7B20MPN22, ABE 7B20MRM20, ABE 7E16SPN22, ABE 7E16SRM20

Mounting on 35 mm rail

Screw fixing (retractable lugs)

(1) ABE 7BV20, ABE 7BV20TB.

ABE 7E16EPN20, ABE 7E16SPN20

Mounting on 35 mm rail

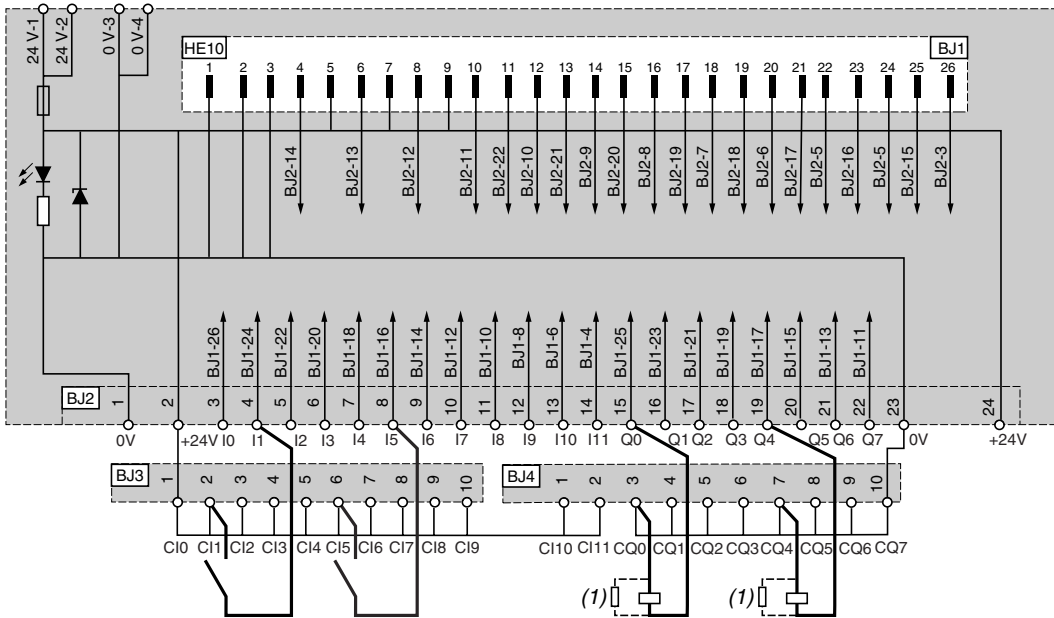

(1) ABE 7BV20, ABE 7BV20TB.

mm  
inches

## ABE 7B20MPN20

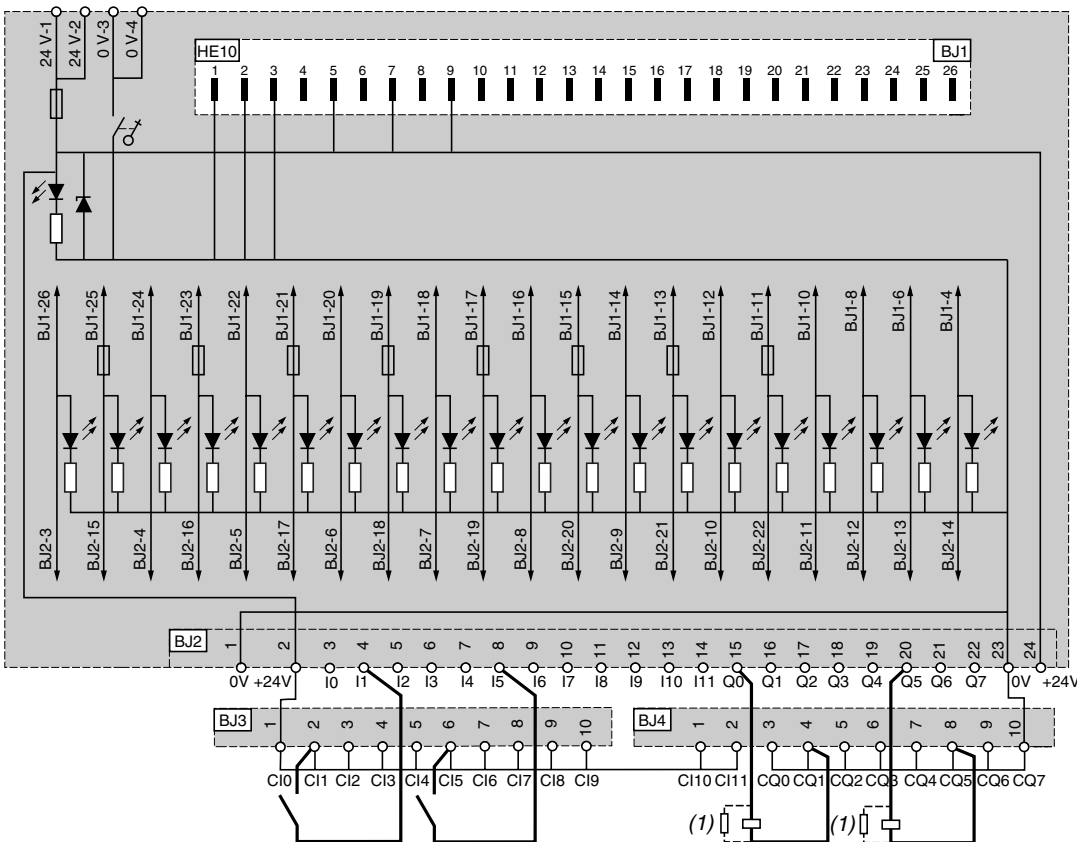

### HE10, 26-way

BJ1

## ABE 7B20MPN22

### HE10, 26-way

BJ1

(1) Example of output connections.  
When connecting an inductive load, include a diode or a varistor.

## ABE 7B20MRM20

HE10, 26-way

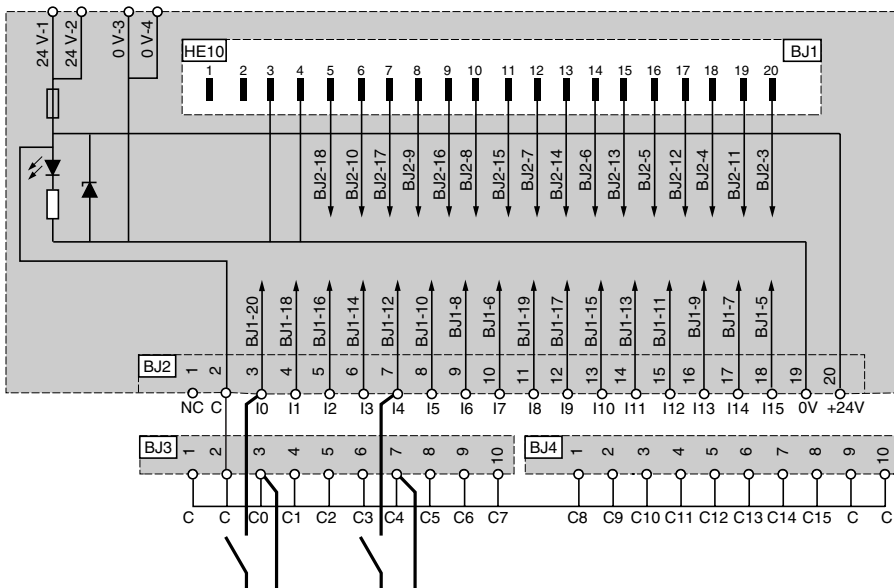

BJ1

(1) Example of output connections.  
When connecting an inductive load, include a diode or a varistor.

## ABE 7E16EPN20

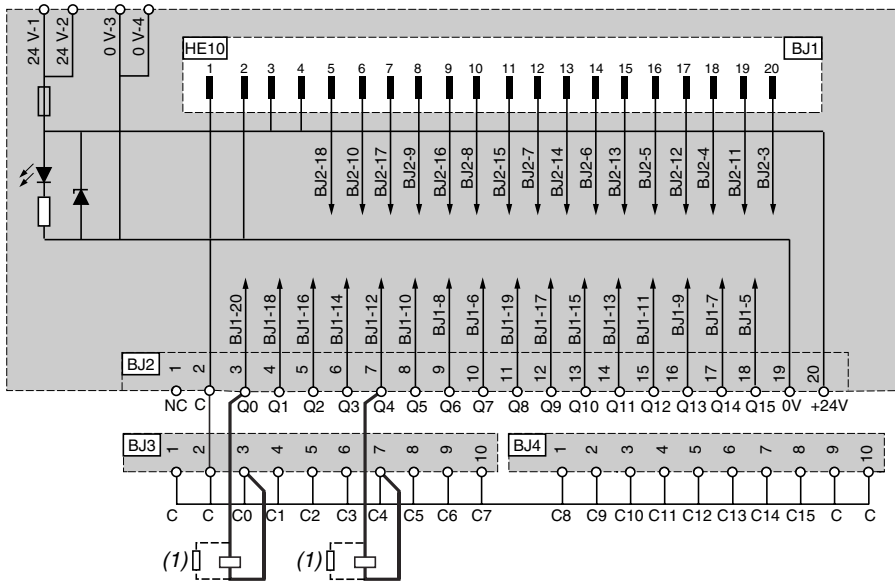

HE10, 20-way

BJ1

## ABE 7E16SPN20

HE10, 20-way

## ABE 7E16SPN22

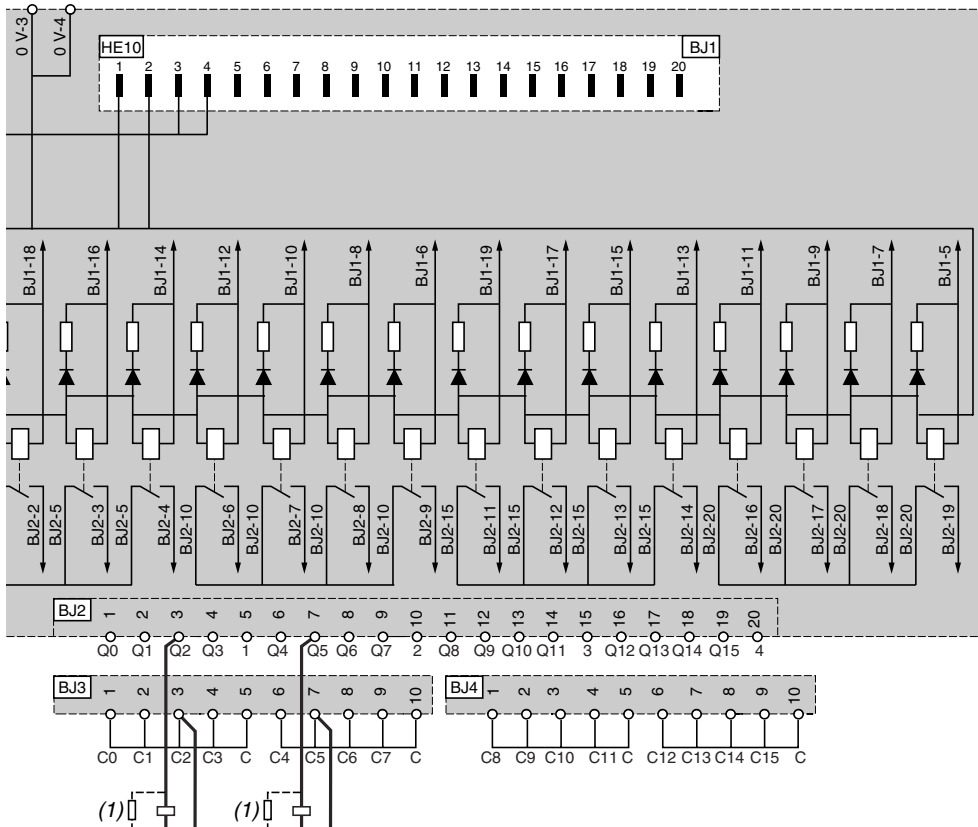

HE10, 20-way

(1) Example of output connections.  
When connecting an inductive load, include a diode or a varistor.

ABE 7E16SRM20

HE10, 20-way

(1) Example of output connections.  
When connecting an inductive load, include a diode or a varistor.

# The efficiency of Telemecanique branded *solutions*

Used in combination, Telemecanique products provide quality solutions, meeting all your **Automation & Control** applications requirements.

## A worldwide presence

### Constantly available

- More than 5 000 points of sale in 130 countries.
- You can be sure to find the range of products that are right for you and which complies fully with the standards in the country where they are used.

### Technical assistance wherever you are

- Our technicians are at your disposal to assist you in finding the optimum solution for your particular needs.
- Schneider Electric provides you with all necessary technical assistance, throughout the world.

*Simply Smart !*
