

EcoStruxure™ Secure Connect

Quick Start Guide

11/2023

EIO0000003800.03

Legal Information

The information provided in this document contains general descriptions, technical characteristics and/or recommendations related to products/solutions.

This document is not intended as a substitute for a detailed study or operational and site-specific development or schematic plan. It is not to be used for determining suitability or reliability of the products/solutions for specific user applications. It is the duty of any such user to perform or have any professional expert of its choice (integrator, specifier or the like) perform the appropriate and comprehensive risk analysis, evaluation and testing of the products/solutions with respect to the relevant specific application or use thereof.

The Schneider Electric brand and any trademarks of Schneider Electric SE and its subsidiaries referred to in this document are the property of Schneider Electric SE or its subsidiaries. All other brands may be trademarks of their respective owner.

This document and its content are protected under applicable copyright laws and provided for informative use only. No part of this document may be reproduced or transmitted in any form or by any means (electronic, mechanical, photocopying, recording, or otherwise), for any purpose, without the prior written permission of Schneider Electric.

Schneider Electric does not grant any right or license for commercial use of the document or its content, except for a non-exclusive and personal license to consult it on an "as is" basis.

Schneider Electric reserves the right to make changes or updates with respect to or in the content of this document or the format thereof, at any time without notice.

To the extent permitted by applicable law, no responsibility or liability is assumed by Schneider Electric and its subsidiaries for any errors or omissions in the informational content of this document, as well as any non-intended use or misuse of the content thereof.

Safety Information

Important Information

Read these instructions carefully, and look at the equipment to become familiar with the device before trying to install, operate, service, or maintain it. The following special messages may appear throughout this documentation or on the equipment to warn of potential hazards or to call attention to information that clarifies or simplifies a procedure.

The addition of this symbol to a “Danger” or “Warning” safety label indicates that an electrical hazard exists which will result in personal injury if the instructions are not followed.

This is the safety alert symbol. It is used to alert you to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.

 DANGER
DANGER indicates a hazardous situation which, if not avoided, will result in death or serious injury.

 WARNING
WARNING indicates a hazardous situation which, if not avoided, could result in death or serious injury.

 CAUTION
CAUTION indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.

NOTICE
NOTICE is used to address practices not related to physical injury.

Please Note

Electrical equipment should be installed, operated, serviced, and maintained only by qualified personnel. No responsibility is assumed by Schneider Electric for any consequences arising out of the use of this material.

A qualified person is one who has skills and knowledge related to the construction and operation of electrical equipment and its installation, and has received safety training to recognize and avoid the hazards involved.

About the Book

Document Scope

This document describes how to quickly install, configure, and test EcoStruxure Secure Connect. EcoStruxure Secure Connect provides secure remote access to devices as if you were on site.

NOTE: Read and understand this document before installing, operating, or maintaining your EcoStruxure Secure Connect.

EcoStruxure Secure Connect users should read through the entire document to understand all features.

Validity Note

This document has been updated for the release of Vijeo Designer 6.2 SP7, SoMachine 4.3 and EcoStruxure Operator Terminal Expert 3.0.

The EcoStruxure Secure Connect offer is compatible with the EcoStruxure Machine Expert software, which is the successor of the SoMachine software. At the time of writing this document, the latest available version of EcoStruxure Machine Expert is 2.0.

Trademarks

Schneider Electric has made every effort to supply trademark information about company names, products, and services mentioned in this manual.

Vijeo Designer, EcoStruxure Operator Terminal Expert, EcoStruxure Machine Expert, and Harmony are registered trademarks or trademarks of Schneider Electric.

GateManager, LinkManager, and SiteManager, are registered trademarks of Secomea A/S.

Microsoft, Windows, Windows Server, Internet Explorer, Windows Media, Excel, Visio, DirectX, Visual Basic, Visual C++, and Visual Studio are registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries.

All other brands and products referenced in this document are acknowledged to be the trademarks or registered trademarks of their respective holders.

Information on Non-Inclusive or Insensitive Terminology

As a responsible, inclusive company, Schneider Electric is constantly updating its communications and products that contain non-inclusive or insensitive terminology. However, despite these efforts, our content may still contain terms that are deemed inappropriate by some customers.

Cybersecurity

Cybersecurity Guideline

Use this product inside a secure industrial automation and control system. Total protection of components (equipment/devices), systems, organizations, and networks from cyber attack threats requires multi-layered cyber risk mitigation measures, early detection of incidents, and appropriate response and recovery plans when incidents occur. For more information about cybersecurity, refer to the following URL:

<http://www.se.com/ww/en/download/document/EIO0000004948/>

▲ WARNING

POTENTIAL COMPROMISE OF SYSTEM AVAILABILITY, INTEGRITY, AND CONFIDENTIALITY

- Change default passwords at first use to help prevent unauthorized access to device settings, controls and information.
- Disable unused ports/services and default accounts, where possible, to minimize pathways for malicious attacks.
- Place networked devices behind multiple layers of cyber defenses (such as firewalls, network segmentation, and network intrusion detection and protection).
- Apply the latest updates and hotfixes to your Operating System and software.
- Use cybersecurity best practices (for example: least privilege, separation of duties) to help prevent unauthorized exposure, loss, modification of data and logs, interruption of services, or unintended operation.

Failure to follow these instructions can result in death, serious injury, or equipment damage.

EcoStruxure Secure Connect

Overview

EcoStruxure Secure Connect allows technicians and programmers to remotely monitor, diagnose, control, and program devices. This can significantly reduce the cost of maintaining devices and maximize device uptime. Remote access to the device is achieved by means of a private, point-to-point connection. Access to this connection is strictly controlled and all data sent and received on the connection is encrypted.

Use Case

This quick start guide presents a typical use case for the deployment of EcoStruxure Secure Connect. It describes how to install and configure the components of an EcoStruxure Secure Connect solution, then use them to control a programmable logic controller (PLC) located on a remote work site from a laptop computer located in a local office.

The following figure shows the use case:

NOTE: The HMIGTO appliance and the M251 Logic Controller must be on the same network at the work site. Modify IP addresses that appear in this guide to those used on your network.

NOTE: This document illustrates one possible use case. EcoStruxure Secure Connect supports many different device types and architectures. Adapt the steps in this document to correspond to your environment.

Use Case Components

Overview

The following sections describe the components of the use case solution.

Licenses

You must have a license to use EcoStruxure Secure Connect.

This document assumes the use of a 30-day free trial license, which includes:

- 1 x EcoStruxure Secure Connect GateManager license
- 1 x EcoStruxure Secure Connect SiteManager Extended 5 agents license
- 1 x EcoStruxure Secure Connect LinkManager license
- 1 x EcoStruxure Secure Connect LinkManager Mobile license

NOTE: This document refers to Trial license usage. The Trial license needs to be followed by Pack purchase to maintain the EcoStruxure Secure Connect service.

HMI/iPC Appliance

This use case assumes the use of a Harmony™ HMIGTO touchscreen display unit compatible with the latest version of the Vijeo Designer configuration software (Vijeo Designer 6.2 SP7 or later).

NOTE: The HMIGTO appliance must have Internet access. For HMI appliances with no Web browser in the application, you can check this as follows:

1. Temporarily connect a PC at the same network connection point
2. Set the PC network settings to those of the HMI appliance
3. Start an Internet browser on the PC and check you can access Web pages.

This may require retrieving settings or obtaining authorization from the IT infrastructure of the work site. Only outbound authorization is required in most cases.

For a complete list of appliances that support EcoStruxure Secure Connect, refer to the Supported Model List in the *EcoStruxure Secure Connect Catalog*.

SiteManager

The SiteManager software runs on the HMIGTO appliance. It is installed on the appliance as part of Vijeo Designer RunTime.

To be registered with the GateManager component, SiteManager requires outgoing access to specific ports and protocols. The following outbound rules must be granted on the HMIGTO appliance:

- TLS through Web proxy (TLS to remote IP address and port of Web proxy)
- HTTPS (HTTP over TLS) to remote IP address of GateManager, remote port 443
- TLS over HTTP to remote IP address of GateManager, remote port 80

SiteManager has a Web user interface. It listens locally for incoming connections to the Web user interface. Access is restricted to the following HMIGTO appliance user:

- TLS to loopback IP, local port 11444

LinkManager

The LinkManager software is installed on a laptop computer in the office and is typically used by PLC programmers and service engineers. LinkManager allows secure remote access to devices.

This use case assumes:

- A laptop computer running Windows 10, 64-bit edition
- A Windows user account on the laptop computer with administrator privileges.
- Access to the Internet using the HTTPS protocol. This may need to be configured on the corporate firewall and/or the personal firewall on the PC.

GateManager

The GateManager software runs on a Schneider Electric-hosted network server. You use GateManager to create secure, encrypted connections between appliances on the work site and the LinkManager software running on personal computers in the office. The Web-based user interface requires use of the HTTPS protocol. When you request a trial license, or purchase a license, a secure, private customer domain folder on the server is automatically created. Login credentials of a GateManager administrator account on this customer domain are then provided to you by email.

It is the role of the GateManager administrator to configure this domain. This involves:

- Attaching purchased licenses to SiteManager appliances.
- Creating subdomains for organizing equipment based on their purpose, access level, physical location, and so on.
- Verifying for the entire customer domain the network status of all SiteManager and LinkManager components.
- Creating and managing other GateManager administrator accounts (only available with GateManager Premium Access) and LinkManager user accounts.
- Setting up and managing audit logs, alerts, and automated actions (only available with GateManager Premium Access).

⚠ WARNING

EQUIPMENT DAMAGE

- Before any maintenance action, ensure by phone that you have on-site agreement.
- Before any update, ensure that you have a stable Internet and electricity environment.
- In particular, do not use 3G through a mobile phone setup as tethering hotspot for any update

Failure to follow these instructions can result in death, serious injury, or equipment damage.

Device

This use case assumes the use of a TM251MESE logic controller, which has a configurable Ethernet interface. The device must be physically connected to the HMIGTO appliance with an Ethernet cable. Make a note of the Ethernet configuration details (IP address and subnet mask) of the device.

EcoStruxure Secure Connect supports a wide range of Schneider Electric devices.

Programming Software

This use case assumes the use of SoMachine V4.3 programming software, installed on the same laptop computer as the LinkManager software.

EcoStruxure Secure Connect only establishes a connection to the appliance. Therefore, any programming software can be used provided that the network requirements (open ports, and so on) are met.

Internet Browser

An Internet browser is required to access the Web-based user interfaces of LinkManager, SiteManager, and GateManager.

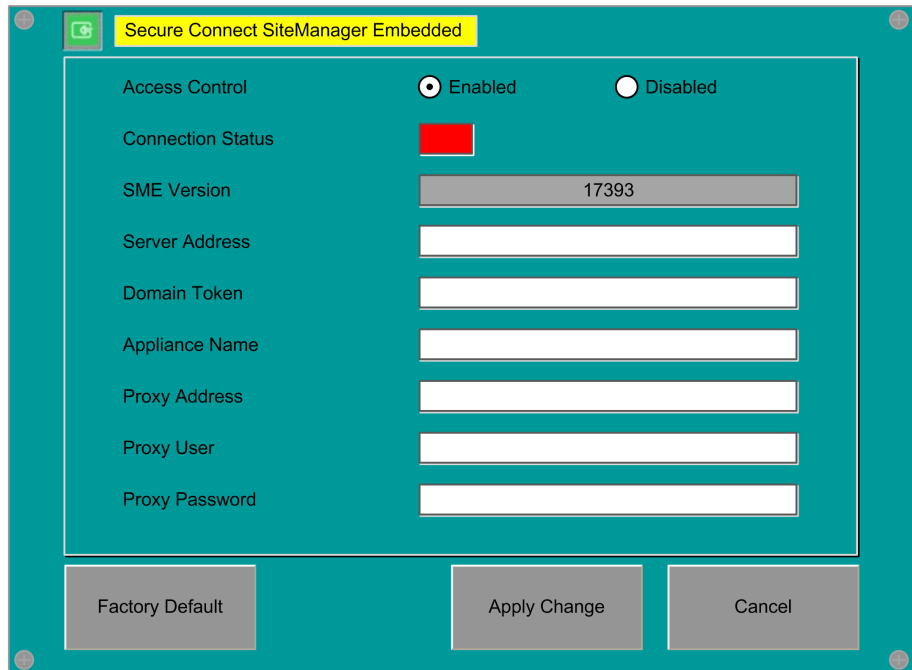

This document assumes the use of Google Chrome. Any recent version of Mozilla Firefox or Microsoft Edge can also be used.

Configuring a Proxy Server

Depending on the network policies in place at the work site, outgoing connections to the Internet may be restricted (IP address range blocked, port range blocked, protocol types blocked, and so on). Both the SiteManager and LinkManager components may require a Web proxy to access the Internet.

If this is the case, contact the network administrator of your work site for help in setting up the connection to the Internet to use a Web proxy.

The SiteManager user interface, for example, allows you to configure a Web proxy:

Proxy Address. IP address of the Web proxy. An IP address, optionally followed by a colon (:) and a port number. For example, *10.11.0.100:9400* or *10.0.11.0.100* (port 80 is used by default).

Proxy User. Web proxy user name, if any.

Proxy Password. Password for the Web proxy user name, if any.

Installation Overview

Installation Steps

⚠ WARNING

UNINTENDED EQUIPMENT OPERATION

This product must be installed and configured by qualified software installation staff with administrator rights.

Failure to follow these instructions can result in death, serious injury, or equipment damage.

Perform the steps in the following order:

1. Connect to the GateManager user interface, page 13
2. Create GateManager and LinkManager user accounts, page 15
3. Enable the SiteManager connection of the HMIGTO appliance to GateManager, page 17
4. Register the HMIGTO appliance with SiteManager, page 19
5. Create an agent, page 21
6. Install LinkManager, page 24
7. Log in to LinkManager and test the connection, page 26.

Step 1: Connecting to the GateManager

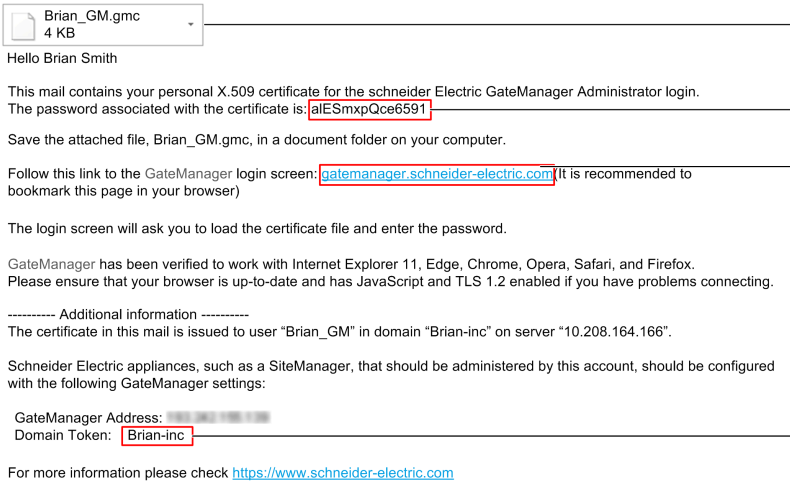

Overview

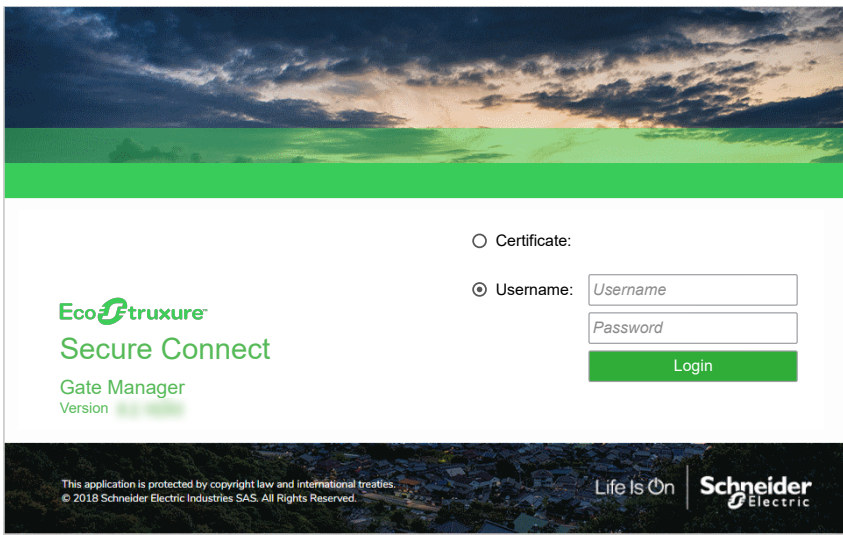

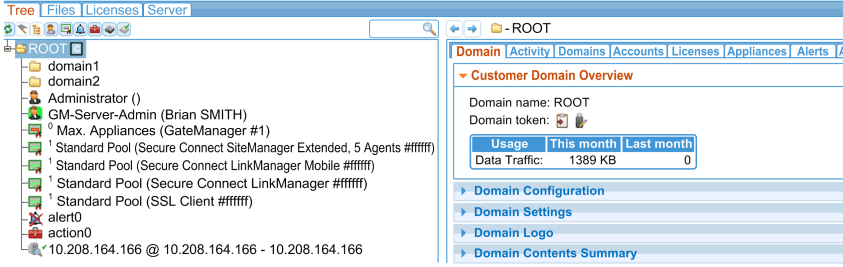

The first step is to request a trial license for EcoStruxure Secure Connect, then log in to the GateManager user interface using the credentials provided. This step can be done on the laptop computer in the office or any other computer.

Obtaining a Trial License

Step	Action
1	Contact your reseller to obtain a Trial license or visit the product page on se.com .
2	If you are using the product enquiry form on the product page, then enter the information requested, and click Request now . Result: A message is sent to the email address you provide.

Logging In to GateManager

Step	Action
1	<p>Open the email that you receive, which contains all the information you need to log in to GateManager. For example:</p>  <p>1 Attached certificate file, with a <i>.gmc</i> (GateManager Certificate) extension</p> <p>2 Password to use with the certificate</p> <p>3 Web site address to use to log in to the GateManager user interface</p> <p>4 This domain token value is later used in the Vijeo Designer RunTime of the HMIGTO appliance. It is used to register the appliance in the GateManager customer domain.</p>
2	Save the GateManager certificate attached to the email to the local file system.
3	Click the GateManager link in the received email (or copy and paste the link into a Web browser) to access the GateManager Login window:

Step	Action
	
4	Select the Certificate option. NOTE: Logging in with a certificate offers improved cybersecurity and is the only option recommended by Schneider Electric.
5	Click Choose a file , then browse and select the GateManager certificate you saved previously.
6	Enter the password contained in the received email.
7	Click Login . Result: The GateManager user interface is displayed: 

Step 2: Creating User Accounts

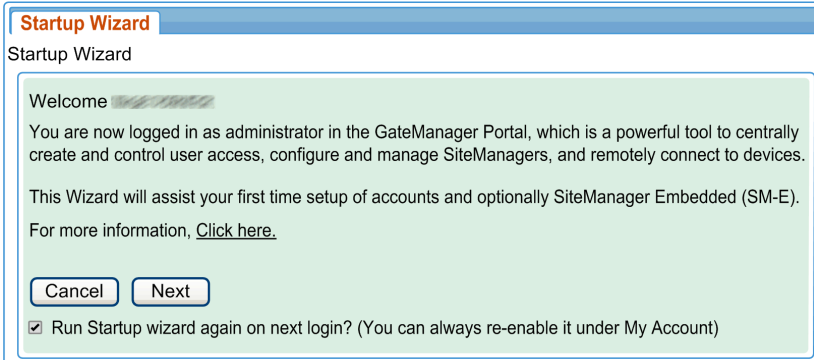

Overview

Once you have accessed the GateManager user interface, the next step is to create user accounts:

GateManager Account Type	Description
Domain Administrator	An option provided by the Premium Access add-on. Allows customers to administer their own customer domain. Allows the creation of sub-domains to manage customers and/or have complete control over which LinkManager users can assess which agents.
Basic Administrator	Standard administrator role managing the customer domain. Performs tasks such as license management and controlling LinkManager.
LinkManager User	The user role for a technician or expert: the physical person who establishes the connection from the laptop computer to the HMI-GTO appliance.

Before starting, take time to consider these roles within your organization. There may be more than one role per person, depending on the size of your organization. For example, if the GateManager Basic Administrator Account and LinkManager User accounts are to be used by the same physical person, only one account is required. Otherwise, two separate accounts are required.

Creating the Accounts

Step	Action
1	<p>The first time you log in to the GateManager user interface, a wizard screen is displayed on the right:</p> 
2	<p>Click Next. The following wizard screen is displayed:</p>

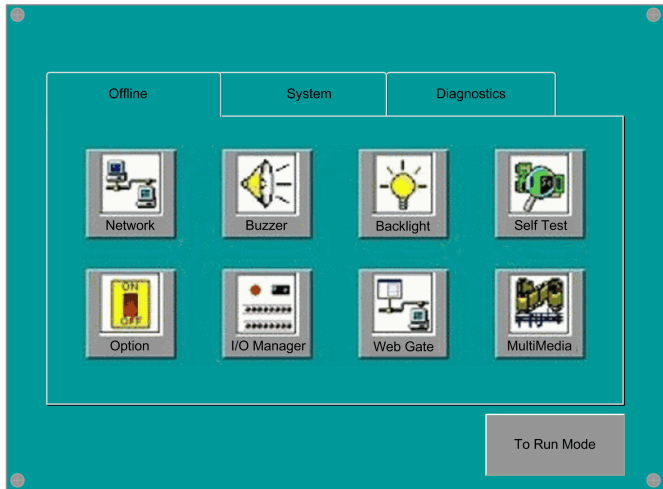

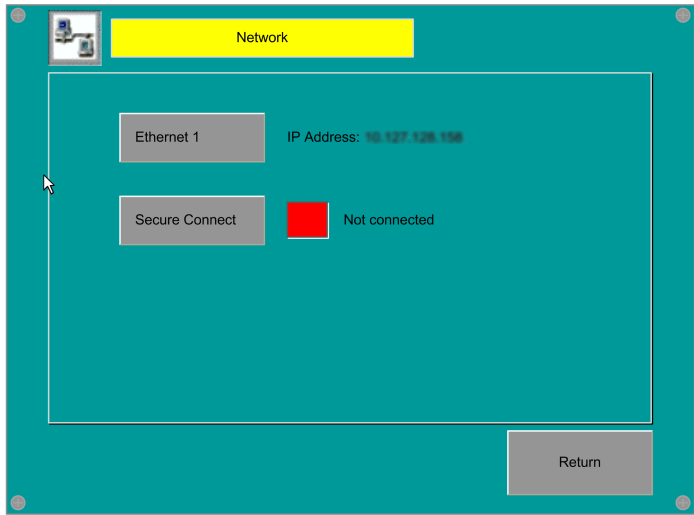

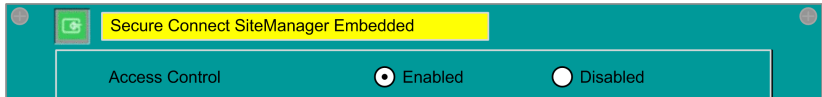

Step	Action
	<div data-bbox="619 203 1433 779"> <p>Startup Wizard</p> <p>Startup Wizard</p> <p> LinkManager License and Account</p> <p>Your domain contains a LinkManager floating license, which can be used by you and your technicians to obtain remote access to devices for programming and troubleshooting of equipment using the native software for the equipment, just as if you were onsite.</p> <p>You can connect to SiteManagers and devices directly from the GateManager Portal with this administrator account. While connected, the LinkManager license will be temporarily allocated to you. Your first connection attempt will automatically check if the LinkManager software is installed on your PC, and if not, you will be presented with a LinkManager download page.</p> <p>You can create an unlimited number of dedicated LinkManager user accounts that will automatically share the license.</p> <p>Click [Next] to get help on creating a dedicated LinkManager user account for yourself.</p> <p>If you want to create an account for another person than yourself, check this box:</p> <p><input type="checkbox"/> I want to create a dedicated LinkManager account for another person.</p> <p><input type="button" value="Cancel"/> <input type="button" value="Back"/> <input type="button" value="Skip"/> <input type="button" value="Next"/></p> <p><input checked="" type="checkbox"/> Run Startup wizard again on next login? (You can always re-enable it under My Account)</p> </div>
3	<div data-bbox="619 853 1433 1205"> <p>Startup Wizard</p> <p>Startup Wizard</p> <p> LinkManager License and Account</p> <p>Your dedicated LinkManager account has now been created, and you will receive an email shortly with your LinkManager login information.</p> <p>Use the same password you entered for this administrator login.</p> <p><input type="button" value="Cancel"/> <input type="button" value="Next"/></p> <p><input checked="" type="checkbox"/> Run Startup wizard again on next login? (You can always re-enable it under My Account)</p> </div> <p>Result: An email is sent to the address you specified when requesting the trial license, page 13. You will use this email later to install LinkManager, page 24.</p>
4	<div data-bbox="619 1361 1433 1845"> <p>Startup Wizard</p> <p>Startup Wizard</p> <p> SiteManager Embedded License and Device</p> <p>You have a SiteManager Embedded (SM-E) license available that can be assigned to an SM-E. Currently no SM-E has connected to which you can associate the license.</p> <p>If the SM-E is not yet installed on the device you want to remote access, you can download it from this link http://ftp.gatemanager.dk/schneider/sme.htm and install on your platform.</p> <p>Once installed and started, enter the following information into the SM-E GUI and ensure that the device on which the SM-E is installed has access to the Internet.</p> <p>GateManager Address: </p> <p>Domain Token: </p> <p><input type="button" value="Finish"/> <input type="button" value="Refresh"/></p> <p><input checked="" type="checkbox"/> Run Startup wizard again on next login? (You can always re-enable it under My Account)</p> </div>
5	Click Finish .

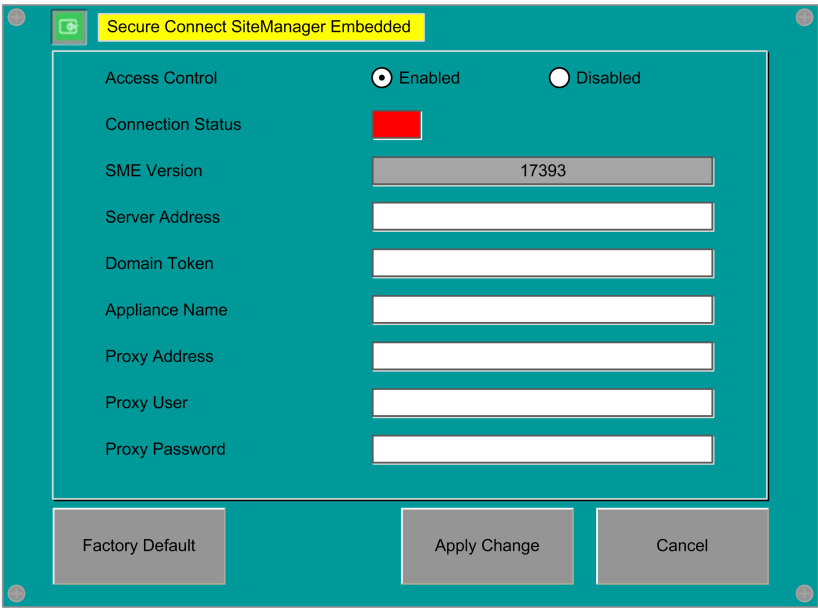

Step 3: Enabling the SiteManager Connection of the HMIGTO Appliance to GateManager

Overview

The next step is to enable the SiteManager software on the HMIGTO appliance and establish a network connection between the appliance—physically located on the work site—and the GateManager server.

Activating and Configuring the SiteManager Software

Step	Action
1	On the HMIGTO appliance, enter the Vijeo Designer RunTime Configuration menu.
2	Select the Offline tab: 
3	Click the Network button. Result: The Network window appears: 
4	Click the Secure Connect button. Result: The Secure Connect SiteManager Embedded window appears.
5	Set the Access Control option to Enabled : 

Step	Action
	<p>Result: Additional fields are displayed:</p> 
6	<p>Specify the following items:</p> <ol style="list-style-type: none"> 1. In the Server Address field, type the IP address of the GateManager server. This address is contained in the email you received when registering your trial version of EcoStruxure Secure Connect. Refer to <i>Logging in to GateManager</i>, page 13. 2. In the Domain Token field, type the domain token assigned to you, "Brian-Inc". This is contained in the email you received when registering your trial version of EcoStruxure Secure Connect. Refer to <i>Logging in to GateManager</i>, page 13. 3. In the Appliance Name field, type a unique name for your appliance, for example "MyHMIGTO". This name is later used to identify the appliance in the GateManager user interface. <p>If the HMI has been previously configured, it is strongly recommended to click the Factory Default button in the bottom left of the window to return SiteManager to its factory default settings.</p> <p>NOTE: If your appliance uses a proxy server, you may also need to complete the Proxy Address, Proxy Server, and Proxy Password fields. Refer to <i>Configuring a Proxy Server</i>, page 11.</p>
7	<p>Click the Apply Change button.</p> <p>Result: You return to the Network window. In a few seconds, the indicator next to the Secure Connect button turns green to indicate a successful connection to your domain on the GateManager server:</p> 
8	<p>Click Return on the Network window.</p>

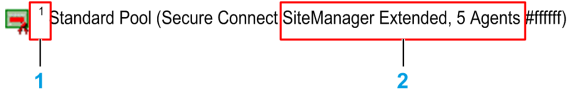

Step 4: Registering an Appliance on GateManager

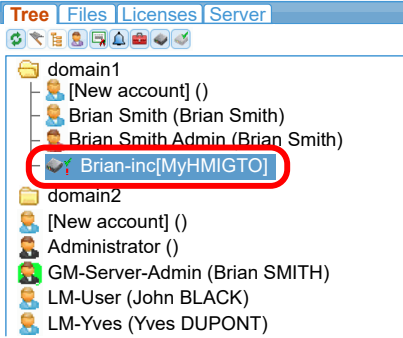

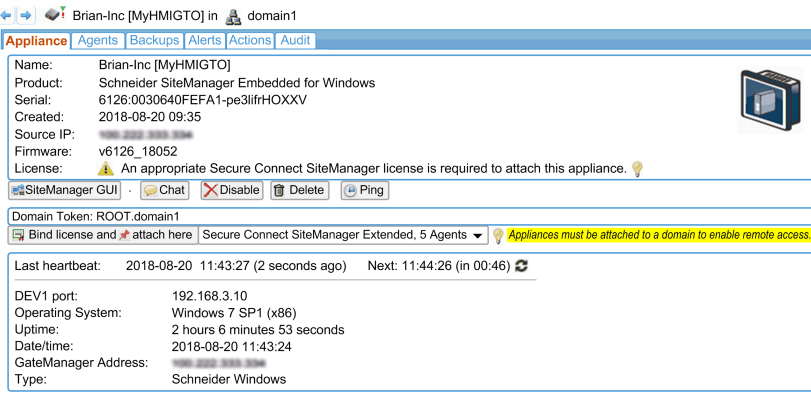

Overview

Every HMI/PC appliance and device deployed as part of a EcoStruxure Secure Connect solution must be associated with a license you have purchased. This association is made in the GateManager user interface.

Associating the HMIGTO Appliance with a SiteManager License

NOTE: This may already have been done when using the wizard to create user accounts, page 15.

Step	Action
1	If you are not already logged in, log in to the GateManager user interface (see Connection to the GateManager, page 13).
2	<p>In the Tree tab on the left, find the following entry:</p>  <p>Standard Pool (Secure Connect SiteManager Extended, 5 Agents #fffff)</p> <p>1 Number of available licenses remaining</p> <p>2 Number of SiteManager agent licenses available</p> <p>A SiteManager agent is a user-defined rule for building a remote connection to either the SiteManager appliance or a device connected to the SiteManager appliance on the work site. Creating an Agent, page 21 describes how to create the rule for this use case.</p> <p>Either a SiteManager Extended, 5 Agents license (included in the trial version) or a SiteManager Extended, 10 Agents license, page 9 is required for this use case.</p> <p>Make sure that there is at least one available license. If the license icon is red and 0 appears (), there are no more available licenses. In this case, return to the EcoStruxure Secure Connect web site or contact your reseller to purchase additional licenses.</p>

Step	Action
3	<p>In the Tree tab on the left, select the appliance to register. Appliances are labeled with the domain prefix and appliance name you assigned in Vijeo Designer Run Time when configuring the connection to GateManager, page 17:</p>  <p>The properties of the appliance appear in the Appliance tab on the right.</p> 
4	<p>Click Bind license and attach here.</p> <p>Result: The appliance is associated with the SiteManager licence.</p> <p>Notice that the number of available licenses in the Tree view on the left is reduced by 1.</p>

Step 5: Creating an Agent

Overview

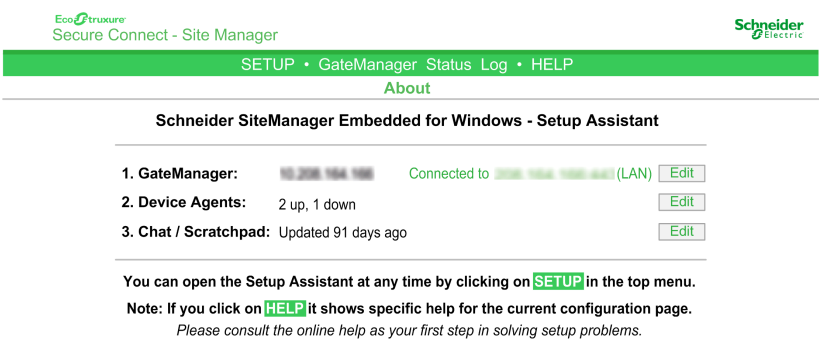

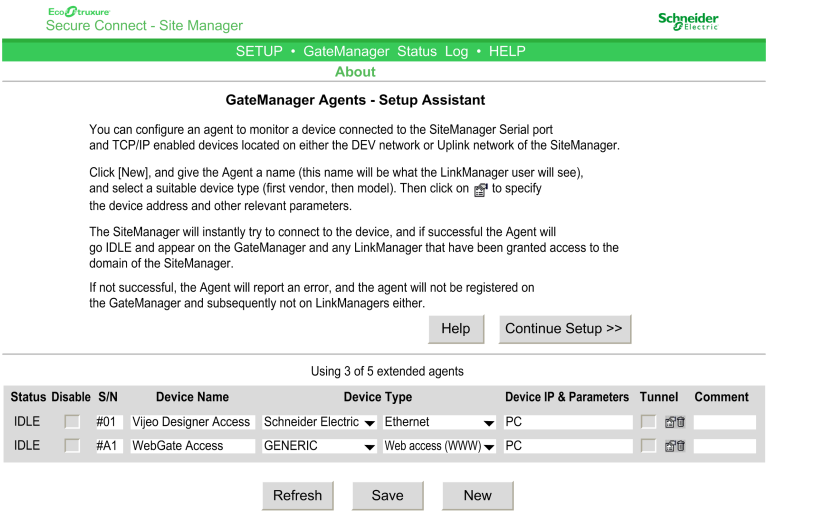

The next step is to create an agent that will allow direct access to the Ethernet interface of the TM251MESE logic controller at the work site.

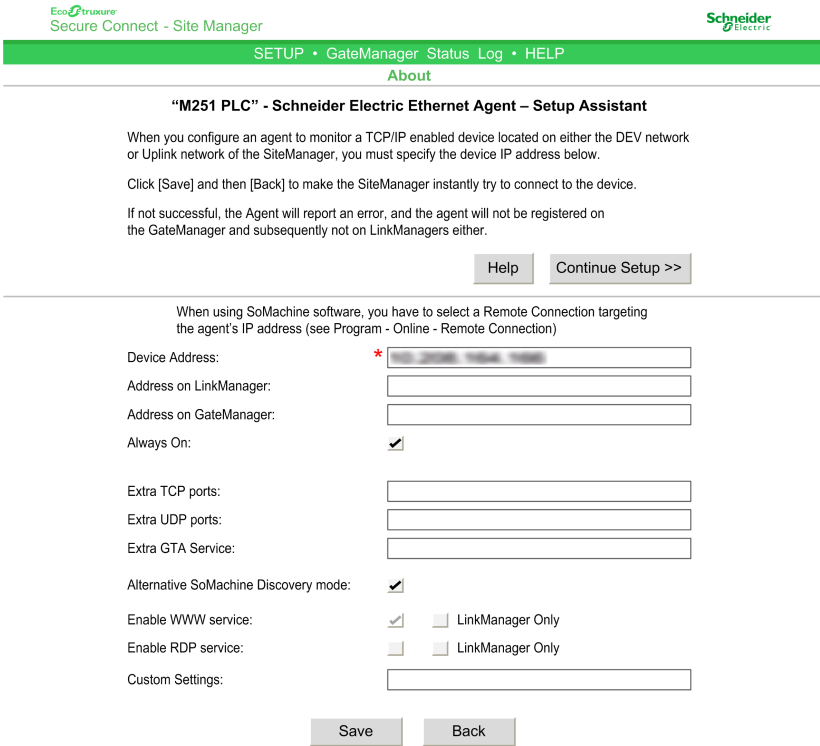

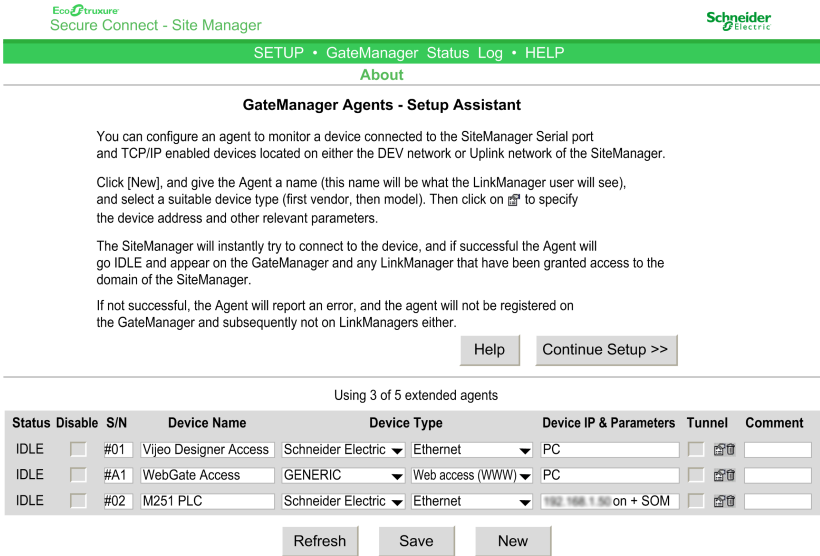

An agent is a user-defined rule containing all the parameters necessary for LinkManager to connect to an individual device. To connect to 5 devices, for example, you would need to create 5 different agents. The license in the trial version is an extended 5 license: up to 5 agents can be used with this appliance, permitting up to 5 extended devices behind the iPC/HMI appliance. Extended devices are those accessible from the iPC/HMI appliance over the network of the work site.

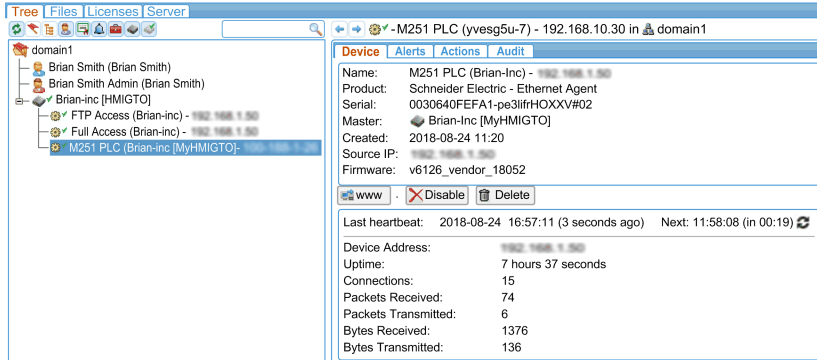

It is also possible for multiple agents to connect to the same device: for example one to establish an FTP connection to the device, and another to build a Vijeo Designer project transfer connection to the device.

Creating an Agent

Proceed as follows:

Step	Action
1	<p>On the PC logged in to the GateManager user interface, page 13, right-click on the MyHMIGTO appliance in the Tree tab on the left and choose Open SiteManager GUI.</p> <p>Result: The SiteManager user interface opens in a new browser tab:</p> 
2	<p>Click the Edit button next to Device Agents.</p> <p>Result: A list of existing agents appears:</p> 
3	Click New .
4	Specify the following information: <ul style="list-style-type: none"> Device Name: M251 PLC

Step	Action
	<ul style="list-style-type: none"> Device Type: Schneider Electric / Ethernet <p>NOTE: The Device Type list box contains the default agent definitions for access to all supported devices (port rules, and so on).</p> <p>The GENERIC device type provides full access to the device.</p> <p>PC in the Device IP & Parameters column refers to the IP address of the appliance. PC can also be selected for HMI appliances.</p>
5	<p>Click the Parameter Details button  to display additional parameters:</p>  <p>Specify:</p> <ul style="list-style-type: none"> Device Address. The IP address of the M251 programmable logic controller Always On. Selected Alternative SoMachine Discovery mode. Selected
6	<p>Click Save then Continue Setup.</p> <p>Result: The new agent is added to the list of agents. If SiteManager can communicate with the device, the device status changes to IDLE after a few seconds, indicating that a connection has been made to the device but data is not yet being exchanged:</p> 
7	<p>Click Continue Setup.</p>

Step	Action
8	Close the browser tab to return to the GateManager user interface.
9	<p>In the Tree tab on the left, select the new agent, which appears below the MyHMIGTO appliance:</p>  <p>Result: The status of the device appears in the Device tab on the right.</p>

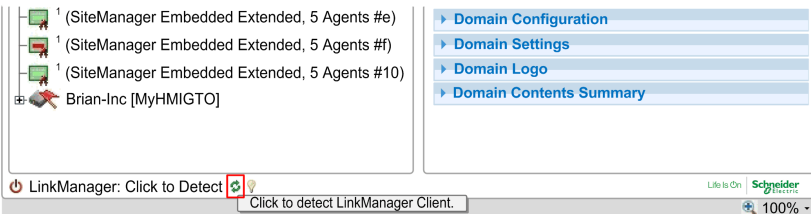

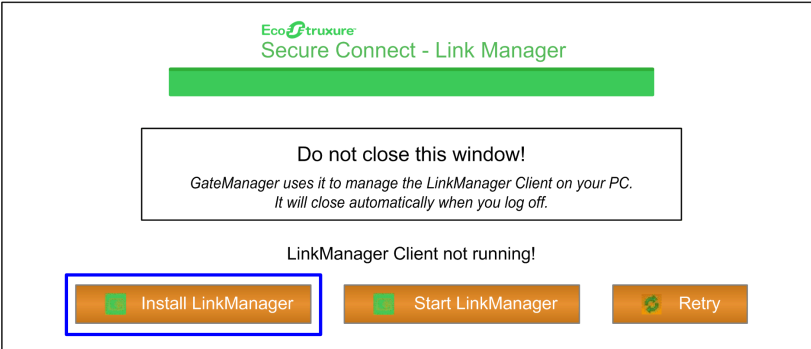

Step 6: Installing LinkManager

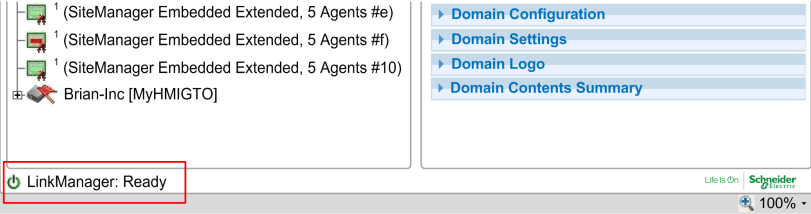

Overview

The next step is to install LinkManager on the laptop computer in the local office.

Installing LinkManager

To install LinkManager:

Step	Action
1	If you are not already logged in, log in to the GateManager user interface (see Connection to GateManager , page 13) on the laptop computer in the office.
2	<p>Click the Refresh icon in the bottom left corner of the GateManager window:</p>  <p>Result: GateManager checks whether the LinkManager software is installed on the laptop computer.</p>
3	<p>The following window appears:</p>  <p>Click Install LinkManager.</p>
4	A message appears asking whether you want to save the setup file. Click Run to launch the setup program.

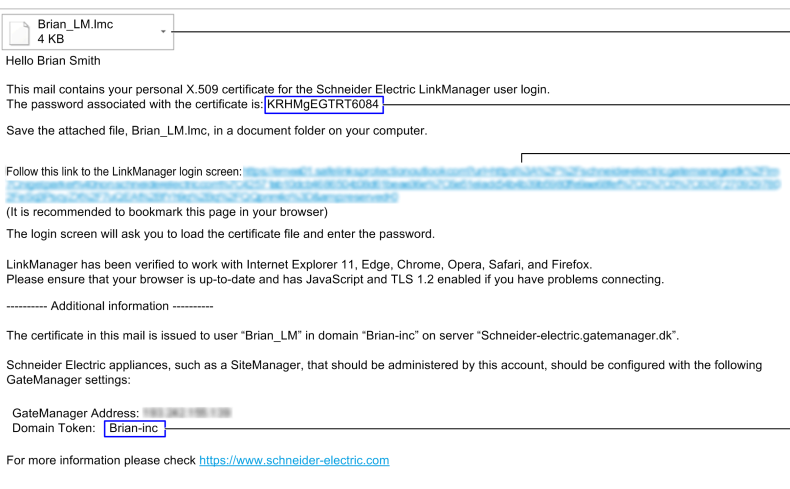

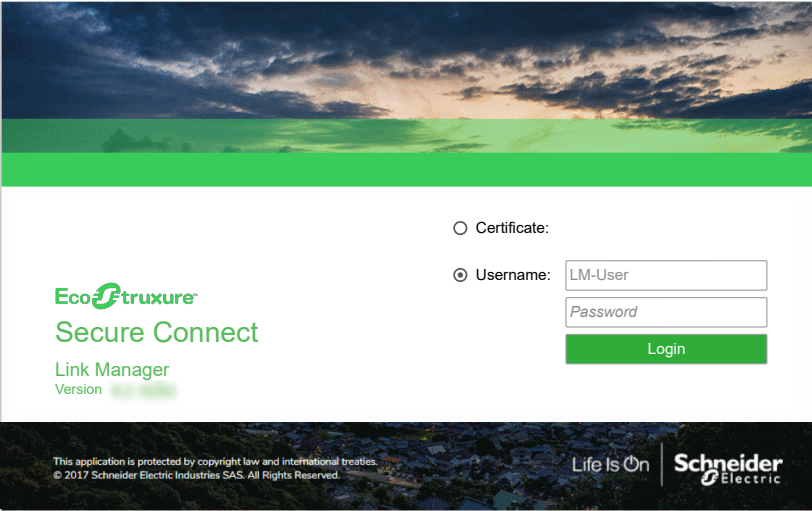

Step	Action
5	<p>Click Run on the security warning window that appears.</p> <p>Result: The LinkManager software is installed on the laptop computer. When installation is complete, a LinkManager icon appears  in the Windows system tray in the bottom right of the screen.</p>
6	<p>Return to the GateManager window and click the Refresh icon in the bottom left of the window again:</p>  <p>This time, the installed LinkManager software is detected and the message changes to LinkManager: Ready:</p>  <p>LinkManager is now installed and ready for use.</p>

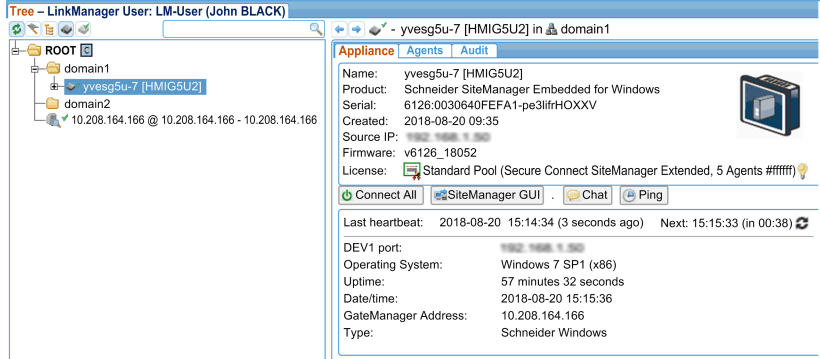

Step 7: Starting LinkManager and Connecting to Device

Overview

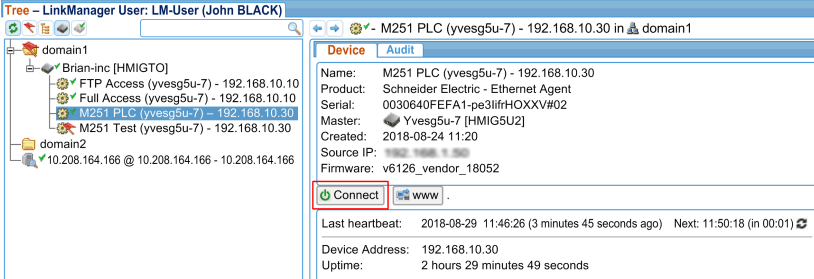

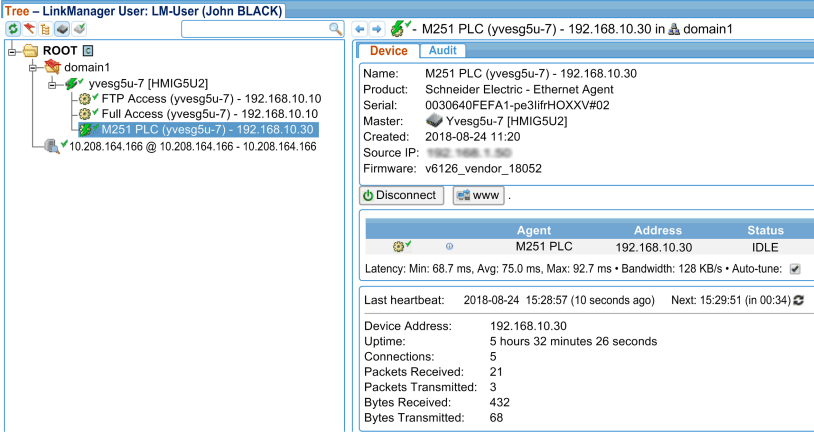

The final step is to log in to LinkManager on the laptop computer and view data generated by the device.

Logging in to LinkManager

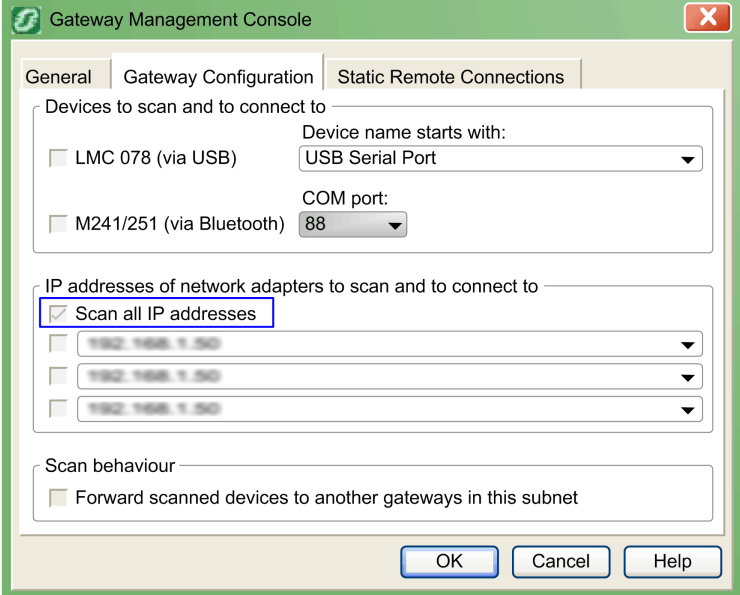

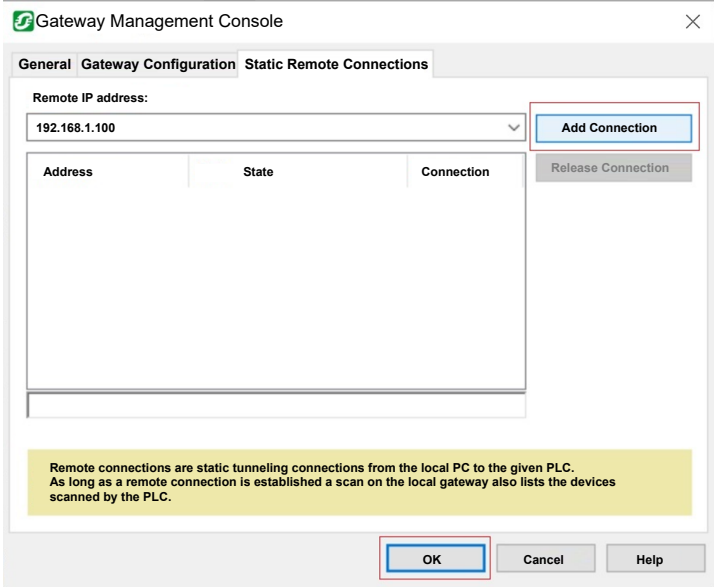

Step	Action
1	<p>Open the email you received after creating the LinkManager user account (see Creating User Accounts, page 15). For example:</p>  <p>1 Attached certificate file with a .lmc (LinkManager Certificate) extension.</p> <p>2 Password associated with the certificate</p> <p>3 Address to use to log in to the LinkManager user interface</p> <p>4 Domain token prefix used to identify appliances.</p>
2	<p>The default Web browser is launched and the LinkManager login window appears:</p> 
3	<p>Select the Certificate option.</p> <p>NOTE: Logging in with a certificate offers improved cybersecurity and is the only option recommended by Schneider Electric.</p>
4	<p>Click Choose and select the previously downloaded LinkManager certificate file.</p>

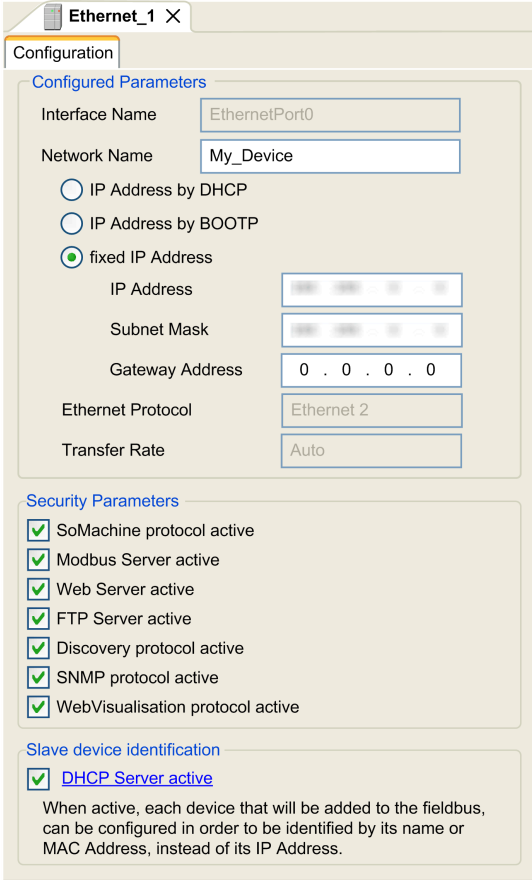

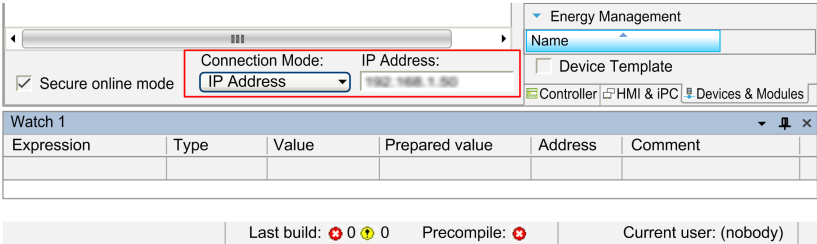

Step	Action
5	Enter the password from the email you received.
6	<p>Click Login.</p> <p>Result: The Link Manager user interface appears:</p>  <p>The screenshot shows the LinkManager interface. On the left is a tree view with 'ROOT' expanded to show 'domain1', 'yvesg5u-7 [HMIG5U2]', and 'domain2'. The right pane shows details for 'yvesg5u-7 [HMIG5U2]':</p> <ul style="list-style-type: none"> Name: yvesg5u-7 [HMIG5U2] Product: Schneider SiteManager Embedded for Windows Serial: 6126:0030640FEFA1-pe3lfrHOXXV Created: 2018-08-20 09:35 Source IP: 10.208.164.166 Firmware: v6126_18052 License: Standard Pool (Secure Connect SiteManager Extended, 5 Agents #fffff) <p>Buttons include 'Connect All', 'SiteManager GUI', 'Chat', and 'Ping'. Status information shows 'Last heartbeat: 2018-08-20 15:14:34 (3 seconds ago)' and 'Next: 15:15:33 (in 00:38)'. System details include 'Operating System: Windows 7 SP1 (x86)', 'Uptime: 57 minutes 32 seconds', 'Date/time: 2018-08-20 15:15:36', 'GateManager Address: 10.208.164.166', and 'Type: Schneider Windows'.</p> <p>NOTE: The LinkManager user interface is very similar to that of the GateManager. Check that LinkManager User: appears in the top-left corner of the window.</p>

Connecting to the M251 Programmable Logic Controller

Step	Action
1	<p>In the Tree tab on the left of the LinkManager use interface, expand the domain structure and select first the MyHMIGTO device, then the M251 PLC agent that you created earlier in GateManager, page 21.</p> <p>Result: The device properties appear in the Appliance tab on the right.</p>
2	<p>Click the Connect button on the right:</p>  <p>NOTE: You could also select the MyHMIGTO appliance on the left, then click the Connect All button that appears on the right to connect all agents defined for the appliance simultaneously.</p> <p>Result: The M251 programmable logic controller connection details appear:</p>  <p>A secure connection has now been established between LinkManager and the device.</p> <p>NOTE: You can also click the WWW button on the right to log in to the web site embedded in the M251 programmable logic controller. This allows you to directly monitor the controller, view diagnostics, and perform a number of maintenance operations (including stopping and starting the controller).</p>

Remotely Programming the M251 Programmable Logic Controller

Step	Action
1	<p>Right-click the SoMachine Gateway Tray Application icon  in the Windows system tray of the laptop computer and choose Gateway Management Console.</p> <p>Go to the Gateway Configuration tab and select the Scan all IP addresses option if it is not already selected:</p>  <p>This ensures that SoMachine is configured to scan all IP addresses for incoming communications.</p> <p>Click OK.</p>
2	<p>Right-click on the Gateway Tray Application icon  in the Windows system tray again, and choose Restart Gateway.</p> <p>Or you can add a static route in the Gateway Tray Application:</p>  <ol style="list-style-type: none"> 1. Click the Static Remote Connections tab. 2. In the Remote IP address field, enter the local IP address of the M251 programmable logic controller, then click Add connection. 3. Click OK. <p>NOTE: This step is important, as it establishes the connection between LinkManager and the remote HMIGTO appliance.</p>

Step	Action
3	Start either SoMachine Central or Logic Builder , and create a new project. Add a TM251MESE logic controller to the project. Refer to the <i>M251 Programming Guide</i> in the EcoStruxure Machine Expert online help if necessary.
4	<p>In Logic Builder, go to the Devices tab on the left and double-click on the Ethernet_1 (Ethernet Network) node to display the Ethernet properties of the logic controller:</p> 
5	<p>Enter the IP Address and the Subnet Mask of the M251 programmable logic controller located on the work site.</p> <p>NOTE: Verify that the values match those you entered when creating the agent, page 21.</p>
6	In the Gateway Address field, enter the IP address of the HMIGTO appliance that is connected to the M251 programmable logic controller.
7	<p>In the Applications Tree tab, create a new programmable object unit (POU):</p> <ol style="list-style-type: none"> Right-click on Application (MyController: TM251MESE) and choose Add Object > POU In the Implementation language list, choose Instruction List (IL), then click Add. Add a new section to the existing application in the controller. For example, create a simple test POU containing a few lines of code: <pre>%MW10 := %MW10 - 1; %MW11 := WSTRING_TO_WORD("51");</pre>
8	<p>In the Devices Tree tab on the left, double-click Application (MyController: TM251MESE). At the bottom of the Controller Selection tab on the right, select IP Address in the Connection Mode list, and enter the IP address of the M251 logic controller:</p> 

Step	Action
9	Click the Login button  on the toolbar, or choose Online > Login .
10	Click Yes on the window that appears to log in to the logic controller.
11	Click OK to transfer the new POU from the LinkManager laptop computer to the logic controller on the work site.
12	In the Application tree tab, click the Start/Stop icon on the toolbar to start and stop running the POU on the logic controller. You are now in control of the program running on the remote M251 programmable logic controller!

Glossary

A

agent:

An object that contains all the parameters necessary for LinkManager to connect to a remote device. For example, an agent might specify use of the FTP protocol, the IP address of the device, and use of the standard FTP port number.

appliance:

An HMI/iPC display unit that LinkManager can connect to.

D

device:

A device, such as a Programmable Logic Controller (PLC), that connects to a display unit.

display unit:

Indicates a touch-panel display unit manufactured by Schneider Electric for displaying the screen interface designed in Screen Editor or Logic Program Software.

domain token:

A text string provided to you when you register EcoStruxure Secure Connect. When concatenated with the appliance name, uniquely identifies appliances in your domain.

domain:

A private area of the GateManager software in which to configure and manage users, appliances, licenses, audit logs, alerts, automated actions, and so on.

G

GateManager:

It is used for user administration and access control for LinkManagers, and acts as communication broker between LinkManagers and SiteManagers.

H

HTTPS:

Hyper Text Transfer Protocol Secure

L

LinkManager:

The software installed on your computer, allows remote access to SiteManager and/or devices represented by agents on the SiteManager.

S

SiteManager Embedded Basic:

One of the license formats required to use SiteManager Embedded. Allows access to the display unit and registration of up to two agents.

SiteManager Embedded Extended:

One of the license formats required to use SiteManager Embedded. Allows access to external IP devices – such as PLCs, IPCs, server, Web camera, and so on, on the same network as the display unit, and registration of five agents or more.

SiteManager Embedded:

Software used to set up access to the EcoStruxure Secure Connect network. This software may not be required as you can set up the network connection from the offline screen of some display units.

SiteManager:

Refers to display units on the work site connected to the EcoStruxure Secure Connect network.

subdomain:

A logical division of a domain, useful for organizing equipment based on purpose, access level, physical location, and so on.
