[1] Series Ratings listed at higher system voltages apply to lower system voltages (Example: 240 3P/3W covers 208Y/120 3P/4W).

[2] Short Circuit tests are conducted at 100–105% of the maximum rated voltage of the panelboard.

[3] Please consult the NQ/NQM Panelboards Information Manual (80043-712-06) for additional information, including series ratings with obsolete circuit breakers.

[4] Where LG is shown, LJ and LL can be used.

[5] Unless otherwise noted, main breakers can be applied at the maximum available amperage rating.

[6] Suffixes HID, SWD, and SWN may also be applied to the applicable branch circuit breakers shown above.

[7] Where QO(B) circuit breakers are shown above, QO(B)H, QO(B)VH, and QH(B) circuit breakers may also be used.

[8] Two-pole CAFI circuit breakers cannot be used on 208Y/120V systems.

[9] Series Ratings listed at higher system voltages apply to lower system voltages (Example: 240 3P/3W covers 208Y/120 3P/4W).
 [10] Short Circuit tests are conducted at 100–105% of the maximum rated voltage of the panelboard.
 [11] Please consult the NQ/NQM Panelboards Information Manual (80043-712-06) for additional information, including series ratings with obsolete circuit breakers.
 [12] Where LG is shown, LJ and LL can be used.
 [13] Unless otherwise noted, main breakers can be applied at the maximum available amperage rating.
 [14] Suffixes HID, SWD, and SWN may also be applied to the applicable branch circuit breakers shown above.
 [15] Where QO(B) circuit breakers are shown above, QO(B)H, QO(B)VH, and QH(B) circuit breakers may also be used.
 [16] Two-pole CAFI circuit breakers cannot be used on 208Y/120V systems.
 [17] Short circuit tests are conducted at 100–105% of the maximum rated voltage of the panelboard.
 [18] Please consult the NF/NFOM Panelboards Information Manual (80043-741-03) for additional information, including series ratings with obsolete circuit breakers.

- The fuse used in this UL test is an envelope (umbrella) fuse. This fuse is designed as a "worst case" fuse. Thus, no matter what manufacturer's fuse is used, the Square D brand circuit breaker is protected.
- The line side fused switch may be in a separate enclosure or in the same enclosure as the loadside breaker. A line side fused switch may be a submain, integral main, or remote main. A load side breaker may be a branch, submain, or an integral main used on the load side of a remote main. This series combination short circuit current rating shall not exceed that of the line side fused switch. The charts apply to Square D brand load side breakers only. However, the line side fuse ratings are independent of the fuse manufacturer.
- Not applicable to Corner Grounded Systems.
- Limiters used in Square D brand DSL and DSL II fused power circuit breakers are not class L fuses and do not have series ratings.

[22] For indicated circuit breakers rated less than this maximum voltage. The indicated short circuit current rating also applies, but at the voltage rating of the circuit breaker.

Selection Procedure for NQ Merchandised Panelboards

1. Review maximum electrical system voltage, ampacity, and available fault current, and determine the type of panelboard that is desired (see tables [Table 9.1–Table 9.4](#)).
2. Identify type (plug-on or bolt-on) and total quantity of branch circuit breaker poles and panel spaces required (see Digest sections 7 and 9 for catalog numbers).
3. Select proper main lug interior (from [Main Circuit Breaker Interiors—Will accept plug-on and bolt-on circuit breakers, page 9-12](#) or [Table 9.7 NQ 14-inch-wide Main Lug Interiors, page 9-14](#)) or:
 - Select main circuit breaker interior and main circuit breaker adapter kit (from [Main Circuit Breaker Interiors—Will accept plug-on and bolt-on circuit breakers, page 9-12](#) or [Table 9.8 Main Circuit Breaker Interiors—Accepts Plug-On and Bolt-On Branch Breakers, page 9-14](#)), based upon the equivalent number of poles and ampere rating.

NOTE: Interiors include solid neutral and are field convertible to top-feed.

 - If a main circuit breaker interior was selected, select a vertical main circuit breaker (or fuse) from the PowerPacT H-, J-, L- Q-, or LA/LH frame pages in Section 7 of the Digest, or a QOB or QOB-VH back-fed main circuit breaker in Section 9 of the Digest.
4. Select ground bars from tables [Table 9.9](#) or any non-standard neutral assemblies (i.e., 200% neutral for non-linear loads) from [Table 9.38](#).
 - Please note that an aluminum ground bar kit is included with NQ Panelboard Interiors.
5. Select any required sub-feed circuit breakers, sub-feed lugs (SFL), or feed-through lugs (FTL) kits:
 - Subfeed circuit breaker (SFB), Sub-feed lugs (SFL) or feed-through lugs (FTL) kits: [Table 9.39](#) in the NQ Accessories sections.
 - For subfeed circuit breakers select a PowerPacT H-, J-, L-, or Q-frame circuit breaker from Section 7 of the Digest.
6. Determine the total enclosure height required by adding requirements from interior, main circuit breaker, neutrals and ground bars, SFL, FTL, or sub-feed circuit breaker.
7. Select enclosure from the tables [Table 9.5–Table 9.9](#), [Table 9.38–Table 9.42](#), [Table 9.25](#), and [Table 9.27](#).
 NEMA Type 1—select box and front (cover) catalog number corresponding to interior catalog number.
 NEMA Type 3R, 5, 12—select enclosure. Cover for Type 3R, 5, 12 is included with the enclosure.
8. Select the branch circuit breakers to be installed in the panel.
 For NQ panelboards use QO (VH) or QH circuit breakers from Section 7 of the Digest, QOB(VH), or QHB circuit breakers from Section 9 of the Digest.
9. Select options and accessories from tables [Table 9.7–Table 9.43](#).

Note: All NQ Merchandised Panelboard interiors include the following: a NQFP15 bag of blank filler plates; a neutral bonding strap; an NQ information manual; a NEMA instruction booklet; and a sheet of circuit numbers.

- [1] DC voltage applications require installation of DC rated QO(B) circuit breakers
- [2] Please note that some local building codes limit panelboards to 42 circuits, including those that reference 2005 or earlier version of NFPA 70.
- [3] Accepts all QO(B) shown in Tables in Sections 7 and 9. Branch circuit breaker trip ampacity cannot exceed panelboard mains rating. 175 A and 200 A circuit breakers may only be installed in single phase 400 A and 600 A NQ Panelboards. Tandem circuit breakers may not be installed.
- [4] "C" suffix indicates copper bussing.
- [5] Enclosure height may increase if accessories including alternate neutral lugs, condo riser neutral assemblies, feed-thru lugs, or sub-feed lugs are installed. 26 in. wide enclosures and trim fronts are required if condo riser neutral assemblies are installed.
- [6] Wall mounting brackets add 0.4 inches to back of MHxWP enclosures.
- [7] Nominal interior dimensions, see PBA600 for details.
- [8] D9 suffix indicates the 8.75 in. Deep Enclosure required for panelboards with PowerPacT L Main Breaker, Switch, or Sub-Feed Breaker. See PBA604 for dimensional details.
- [9] If Blank End Walls are desired at both ends of NEMA 1 Enclosure, select catalog number with "BE" suffix.
- [10] Add "F" for flush mount, "S" for surface mount.
- [11] Three point latch trim fronts are required for enclosures on panelboards with QO2175, QO2200, QO2175VH, or QO2200VH branch circuit breakers. These breakers take four pole spaces in single phase NQ interior.
- [12] Enclosure includes trim kit. Nominal interior dimensions, see PBA711 for details.
- [13] Vented Type 3R enclosure with three point latch door. Required for outdoor applications with two sub-feed breakers, or sub-feed breaker with trip current >150A. NEMA 3R enclosures must be bottom fed, and a NQ12RDE kit should also be selected. Interior nominal dimensions, see PBA603WP for details.
- [14] For the NQ14-inch-wide panelboard offer, See NQ 14-inch-wide—240 Vac, 48 Vdc.
- [15] Use only if the Local Jurisdiction where this panelboard interior is being applied has adopted the 2008 NFPA 70—National Electrical Code® (NEC®), which allows single panelboard interiors greater than 42 circuits.
- [16] NEMA 3R, 5, or 12 enclosures must be bottom fed, when selected, an NQ12RDE kit should also be selected. See *NQ Merchandised Accessories*, page 9-22.

[17] DC Voltage applications require installation of DC rated QO(B) circuit breakers.
 [18] Please note that some local building codes limit panelboards to 42 circuits, including those that reference 2005 or earlier version of NFPA 70.
 [19] Accepts all QO(B) shown in Tables in Sections 7 and 9. Branch circuit breaker trip ampacity cannot exceed panelboard mains rating. 175 A and 200 A circuit breakers may only be installed in single phase 400 A and 600 A NQ Panelboards. Tandem circuit breakers may not be installed.

 [21] Enclosure height may increase if accessories including alternate neutral lugs, condo riser neutral assemblies, feed-thru lugs, or sub-feed lugs are installed. 26 in. wide enclosures and trim fronts are required if condo riser neutral assemblies are installed.
 [22] Wall mounting brackets add 0.4 inches to back of MHxWP enclosures.
 [23] Please select the appropriate UL Service Entrance Kit for UL Service Entrance applications (see U.S. Service Entrance Barrier Kits, page 9-26).
 [24] Circuit breaker interrupt ratings, see the table for each circuit breaker range in Section 7.
 [25] Nominal interior dimensions, see PBA600 for details.
 [26] D9 suffix indicates the 8.75 in. Deep Enclosure required for panelboards with PowerPacT L Main Breaker, Switch, or Sub-Feed Breaker. See PBA604 for dimensional details.
 [27] If Blank End Walls are desired at both ends of 5.75" deep NEMA 1 Enclosure, select catalog number with "BE" suffix. Both end walls are blank in 8.75" deep enclosures.
 [28] Replace () with "F" for flush mount, or "S" for surface mount.
 [29] Three point latch trim fronts are required for enclosures on panelboards with QO2175, QO2200, QO2175VH, or QO2200VH branch circuit breakers. These breakers take four pole spaces in single phase NQ interiors.
 [30] Enclosure includes trim kit. Nominal enclosure dimensions, see PBA711 for details.
 [31] Vented Type 3R enclosure with three point latch door. Required for outdoor applications with PowerPacT L main breaker, two sub-feed breakers, or sub-feed breaker with trip current >150 A. NEMA 3R enclosures must be bottom fed. Interior nominal dimensions, see PBA603WP for details.
 [32] For the NQ14-inch-wide panelboard offer, See NQ 14-inch-wide—240 Vac, 48 Vdc, page 9-14.
 [33] Pole spaces shown are available for branch circuits, with spaces deducted for the back-fed main breaker.
 [34] Do not select a back-fed main for panels to be "Suitable for use as UL service equipment." Select a H frame circuit breaker (and associated main circuit breaker kit) from the list for 225 interiors, for panels to be "Suitable for use as UL service equipment."
 [35] QOB2110VH, QOB2125VH, or QOB2150VH take four pole spaces in NQ single phase interior.
 [36] For single phase applications, order a 3-pole breaker. Example: HDL36100.
 [37] Available for 125-400 A applications. Please order short handle circuit breaker (i.e., LAL36400MB).

[38] Please note that some local building codes limit panelboards to 42 circuits, including those that reference 2005 or earlier version of NFPA 70.
 [39] Accepts all QO(B) shown in Tables in Sections 7 and 9. Branch circuit breaker trip ampacity cannot exceed panelboard mains rating. 175 A and 200 A circuit breakers may only be installed in single phase 400 A and 600 A NQ Panelboards. Tandem circuit breakers may not be installed.
 [40] "C" suffix indicates copper bussing.
 [41] Enclosure height may increase if accessories including alternate neutral lugs, condo riser neutral assemblies, feed-thru lugs, or sub-feed lugs are installed. 26 in. wide enclosures and trim fronts are required if condo riser neutral assemblies are installed.
 [42] Wall mounting brackets add 0.4 inches to back of MHxWP enclosures.
 [43] Please select the appropriate UL Service Entrance Kit for UL Service Entrance applications (see U.S. Service Entrance Barrier Kits, page 9-26).
 [44] Circuit breaker interrupt ratings, see the table for each circuit breaker range in Section 7.
 [45] Nominal interior dimensions, see PBA600 for details.
 [46] D9 suffix indicates the 8.75 in. Deep Enclosure required for panelboards with PowerPac L Main Breaker, Switch, or Sub-Feed Breaker. See PBA604 for dimensional details.
 [47] If Blank End Walls are desired at both ends of 5.75" deep NEMA 1 Enclosure, select catalog number with "BE" suffix. Both end walls are blank in 8.75" deep enclosures.
 [48] Replace () with "F" for flush mount, or "S" for surface mount.
 [49] Three point latch trim fronts are required for enclosures on panelboards with QO2175, QO2200, QO2175VH, or QO2200VH branch circuit breakers. These breakers take four pole spaces in single phase NQ interiors.
 [50] Enclosure includes trim kit. Nominal enclosure dimensions, see PBA711 for details.
 [51] Vented Type 3R enclosure with three point latch door. Required for outdoor applications with PowerPac L main breaker, two sub-feed breakers, or sub-feed breaker with trip current >150 A. NEMA 3R enclosures must be bottom fed. Interior nominal dimensions, see PBA603WP for details.
 [52] For the NQ14-inch-wide panelboard offer, See NQ 14-inch-wide—240 Vac, 48 Vdc.
 [53] Pole spaces shown are available for branch circuits, with spaces deducted for the back-fed main breaker.
 [54] Do not select a back-fed main for panels to be "Suitable for use as UL service equipment." Select a H frame circuit breaker (and associated main circuit breaker kit) from the list for 225 interiors, for panels to be "Suitable for use as UL service equipment."
 [55] QOB2110VH, QOB2125VH, or QOB2150VH take four pole spaces in NQ single phase interior.
 [56] For single phase applications, order a 3-pole breaker. Example: HDL36100.
 [57] Available for 125–400 A applications. Please order short handle circuit breaker (i.e., LAL36400MB).

[120] Quantity of terminations is the same for copper and aluminum neutral assemblies.

[121] Allowances shown are for installation of only one type of add-on neutral lug type. When mixing add-on neutral lug types in a panelboard: 1) the total quantity may not exceed the maximum shown in that row of the table. 2) the capacity for NQ100AN is reduced by twice the quantity of NQ200AN and Q1150AN installed.

[122] Each 1 pole 70 A QO(B)170(VH) installed reduces maximum add-on lug quantity by two. A QO70AN may be used in place of an NQ100AN to create a neutral termination for a 70 A QO(B)- (VH) circuit breaker.

[123] Not allowed in 100 A NQ panelboards.

[124] One NQ200AN is required provide neutral termination for every two 175 - 200 A QO (VH) circuit breakers.

[125] Number of Terminations Required to Install Add-on Lug to NQ Neutral assembly. Lugs may block 1-4 additional terminations depending upon where each is installed.

Selection Procedure for NF Merchandised Panelboards

1. Review maximum electrical system voltage, ampacity, and available fault current, and determine the type of panelboard is desired (see [NF and I-Line™ Panelboards, page 9-5](#)).
2. Identify total quantity of branch circuit breaker poles and panel spaces required (see Digest sections 7 and 9 for catalog numbers).
3. Select proper main lug interior from [NF Main Lug Interiors, page 9-28](#) or:
 - Select main circuit breaker interior and main circuit breaker adapter kit from [NF Main Circuit Breaker Interiors - 600Y/347 Vac Max., page 9-29](#) based upon the equivalent number of poles and ampere rating.
NOTE: Interiors include solid neutral and are field convertible to top-feed.
 - If a main circuit breaker interior was selected, select a vertical main circuit breaker (or fuse) from PowerPacT H-, J-, L-, or LA/LH frame circuit breakers pages in Section 7 or a back-fed E-frame circuit breaker from Section 9 of the Digest.
4. Select ground bars from tables [Table 9.80](#) and any non-standard neutral assembly (i.e., 200% neutral for non-linear loads) from [Table 9.74](#).
 - Please note that an aluminum ground bar kit is included with NF Panelboard Interiors.
5. Select any required sub-feed circuit breakers, sub-feed lugs (SFL), or feed-through lugs (FTL) kits:
 - Subfeed circuit breaker (SFB), sub-feed lugs (SFL) or feed-through lugs (FTL) kits: [Table 9.75](#) in the NF Accessories sections.
 - For subfeed circuit breakers, select PowerPacT H-, J-, L- frame circuit breaker from Section 7 of the Digest.
6. Determine the total enclosure height required by adding requirements from interior, main circuit breaker, neutrals, SFL, FTL, or sub-feed circuit breaker.
7. Select enclosure from the tables, [Table 9.76](#), and [Table 9.77](#).
NEMA Type 1—select box and front (cover) catalog number corresponding to interior catalog number.
NEMA Type 3R, 5, 12—select enclosure. Cover for Type 3R, 5, 12 is included with the enclosure.
8. Select the branch circuit breakers to be installed in the panel.
For NF panelboards, use E-frame circuit breakers from [E-frame Thermal-magnetic \(480Y/277 Vac Max\) Maximum allowable branch breaker pair combination = 170 A, 100 A Maximum at 600Y/347 Vac, page 9-30](#).
9. Select options and accessories from tables [Table 9.74–Table 9.80](#).
NOTE: Additional NF and NQ options may be found in the [Supplemental Digest, Section 4](#).

Monitors circuit breaker contact status and provides a remote signal indicating the circuit breaker contacts are OPEN or CLOSED. Application Max Load = 10 A @ 120 Vac 50/60 Hz Terminals for #14 AWG Cu wire	Used with control circuits and is actuated only when the circuit breaker has tripped. Application Max Load = 7 A @ 120 Vac 50/60 Hz Terminals for #14 AWG Cu wire.	Shunt Trip—Trips the circuit breaker from a remote location by means of a coil energized from a separate circuit. A 120 V shunt trip will operate at 55% or more of rated voltage. Application For use with momentary or maintained push button. 120 Vac 50/60 Hz Terminals for #14 AWG Cu wire.

Separated Distribution and Split Bus NF and NQ Panelboards

Square D Separated Distribution and Split Bus Panelboards provide compact, affordable options to protect lighting, HVAC, renewable energy, and appliance circuits in buildings. Separated Distribution Panelboards facilitate Separation of Electrical Circuits for Electrical Energy Monitoring to simplify compliance with Section 130.5-B of California's 2016 Building Energy Efficiency Standards.
NOTE: Refer to Data Bulletin 1600HO1701 for more information.

Special lug pad adaptors allow field removal of cables, for easy field installation of solid core or split CTs for electrical energy measurement, by load type.

Split Bus panelboards enable configurations of two or three back fed main circuit breakers, with independent branch distribution sections, in a single enclosure.

Powerlink™ Intelligent Lighting Control Systems

Powerlink intelligent lighting control systems are ideally suited for controlling lighting and other loads in commercial, institutional, and industrial facilities. Such systems are typically used to lower utility cost by switching branch circuits OFF during non-occupied periods when lighting is unnecessary or during peak demand periods when a partial reduction in load can save significant money.

These systems utilize remotely operated circuit breakers to switch branch circuits ON and OFF via a time schedule or by an externally generated signal (typically a low voltage wall switch, photocell, access system, fire alarm or building management system). All Powerlink components mount inside a standard lighting panelboard to provide a compact, space saving installation.

Powerlink intelligent lighting control systems feature a powerful microprocessor based controller that provides system intelligence for 168 remotely operated branch circuits. Master panelboards contain the control electronics, power supply, and control bus strips for up to 42 branch circuit breakers. Sub-panels extend the capability of the system by allowing remotely operated branch circuit breakers to be operated from the master controller via a simple, 4-wire, sub-net connection.

Powerlink panels systems have the capability of being networked together and operated from a central workstation or via a remote modem connection. Powerlink software allows users to remotely configure the system, change time schedules, monitor circuit breaker or input status, and override zones and breakers.

BACnet Capability

The Building Automation and Control network (BACnet) communication protocol is incorporated into the Powerlink™ controller design. The addition of the BACnet protocol allows Powerlink panels to be easily integrated into a Building Automation System (BAS) employing this open communication standard without the need for communication bridges or gateways.

Controller

Powerlink NF3500G4 controllers support 'native' BACnet and Ethernet communications.

Factory Assembled System

SE advantage may be used to select 120 Vac, 240 Vac or 480Y/277 Vac Powerlink intelligent lighting control systems:

- Select system type and interior size from Table 9.88 , page 9-42. All Powerlink panels are furnished with either 1 or 2 control bus strips.
- All Powerlink panels use NF type panelboard interiors, boxes, and trims and are suitable for 120 Vac, 240 Vac or 480Y/277 Vac systems.
- Select branch circuit breaker requirements. Powerlink panels can accommodate both ECB-G3 remotely operated circuit breakers and EDB, EGB and EJB standard branch circuit breakers.
- Refer to panelboard section for additional panelboard accessories.
- For complete price, order by description.
- Apply appropriate discount schedule.

Energy Management (EM) Lighting Control System

The Powerlink Energy Management (EM) Lighting Control System incorporates the same features found in the Powerlink 3500 level system, in addition to integral branch circuit and optional main metering for energy monitoring and verification of the lighting system. Integral metering is accomplished using the PowerLogic™ Branch Circuit Power Meter (BCPM), which is a highly accurate, full-featured multi-branch circuit power meter that provides unrivalled low-current monitoring.

The Powerlink system reduces electrical energy consumption associated with lighting and other loads by automatically switching loads off during non-occupied periods. The Powerlink system is often ideal for reducing the peak demand by switching unnecessary lights off in response to an automated response signal or when high time-of-day energy tariffs occur.

- Integral individual and optional mains metering to provide utmost flexibility in assuring a sustainable metering and verification program
- Monitors current, voltage, energy consumption, demand, and power factor for complete energy profiling
- Accumulated metering information transmitted via Modbus communications interface
- Data updates occurring within seconds to provide timely preventative maintenance information
- Optional EGX150 web interface for storing and reporting data via standard web browser (suggested for applications without Energy Management System [EMS] software)
- Alarm indication when parameters approach user-configured thresholds
- 16 hard-wired inputs available for connection to devices with physical dry-contacts
- 64 communication inputs available for network connection
- 16 independent time schedules, each can be configured into 24 distinct periods
- 7-day repeating clock with changeable automatic daylight savings time
- Automatic sunrise/sunset tracking with offsets
- 32 special event periods
- 32 remote sources for sharing input status, time schedules, or zone status between controllers
- Full custom logic capabilities, including full Boolean functions and synchronization services
- RS232 and RS485
- Serial communications using Modbus ASCII/RTU, BACnet MS/TP and DMX512 protocols (metering Modbus only)
- Ethernet 100BaseT communications using Modbus TCP and BACnet/IP protocols

[71] To complete the catalog number, replace the blank () with the appropriate interrupt rating (G, J, K, or L).

[72] For 100% rated circuit breakers add a "C" in the 9th character place. For example, the catalog number for a 100% standard-type trip unit with LI trip functions at 250 A would be PGA36025CU31A.

[2] (#) = Number of conductors per phase.

[3] The lug range shown is for the highest amperage of the circuit breaker frame shown in the table.

[4] Use only 90 °C insulated conductors based on an ampacity of 75 °C conductors.
