## JSY1000/3000/5000 Series

Plug-in

Size reduction has been made possible thanks to a flow increase.

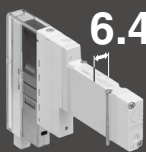

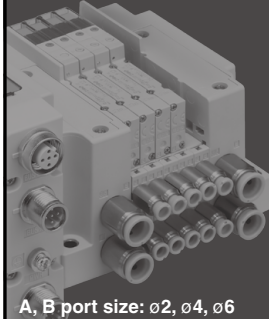

This allows for **space saving**, **weight reduction**, and a **large flow rate**.

## A 4-position dual 3-port valve is available.

- Features two 3-port valves built into one body

- The 3-port valves on the A and B sides can be operated independently.
- When used as a 3-port valve, only half the number of stations are required.
- Can also be used as a 4-position, 5-port valve

### ■ Noise resistance

- Uses the 2.4 GHz ISM frequency band
- Frequency hopping: Every 5 ms

### ■ High-speed connection

- From the remote power supply ON to start of communication:  
**Min. 250 ms**

### ■ Communication response

- Wireless communication signal  
Response time: **5 ms**

### ■ Communication cables not required

- Reduced wiring work, space, and cost
- Minimized disconnection risk

### ■ Number of I/O points

- Max. 1280 inputs/1280 outputs  
(Max. 128 inputs/128 outputs per module)

### ■ Compatible protocols

## Application Examples

### For tool changing

### For spot welding

### For rotary tables

## The EX260 series supports safety communication (PROFIsafe).

■ This is a Fieldbus unit which supports safety standard ISO 13849-compliant safety circuit constructions.

PROFIsafe is established as an international standard (IEC 61784-3-3). It is a communication protocol that transmits safety-related data by PROFINET communication and can be used up until safety standards ISO 13849-1 PL e and IEC 61508/IEC 62061 SIL 3.

### ■ Using the safety communication protocol

Refer to the EX260 **Web Catalog** for details on units that support the safety communication protocol. When using a manifold valve within an ISO 13849-compliant safety system, the device needs to be considered from both the pneumatic circuit and the electric side. Devices (including valves) need to be selected based on whether their functions are in line with the safety level of the equipment as a whole. The use of valves that have been validated as being compliant with ISO 13849-2 may be required. For details on valves that have been validated, please contact SMC. In addition, refer to "Safety Instructions" for precautions on model selection.

# Ejector can be mounted on a compact-size JSY1000 p. 161-1

The devices have been integrated into one for applications in which an actuator and vacuum suction are used together.

Spacer Type Ejector is connection to both A port and B port. (See p. 161-4 circuit diagram). One of them can be connected to vacuum pad and the other to pressure switch without a branch piping to manifold. When only one of them is turned piping, be sure to turn plug the unused port.

## Application Examples

### Material handling

### Small box making process

#### Metal workpiece with holes and complicated shape

Magnet gripper + Vacuum pad, etc.

#### Small robot

Air gripper + Vacuum pad, etc.

#### Pick and place

Slide table + Vacuum pad, etc.

#### Cartoner

Cylinder + Vacuum pad, etc.

Separate fieldbus-compatible manifold JSY1000-E types are available to built-in pressure sensor and enable energy-saving control of ejector.

## Manifold Options

### Individual SUP spacer

When the same manifold is to be used for different pressures, an individual SUP spacer can be used to act as a supply port for different pressures.

p. 153

### Individual EXH spacer

When valve exhaust affects other stations due to the circuit configuration, this spacer can be used for individual valve exhaust.

p. 153

### New Spacer Type Ejector for JSY1000

Used for vacuum suction applications.

### Manifold Options

#### ■ SUP/EXH blocking disk

(For the connector type manifold, Type 10)

##### [SUP blocking disk]

Inserting an SUP blocking disk in the pressure supply passage of a manifold valve can allow for the use of 2 different pressures (high and low) in 1 manifold.

##### [EXH blocking disk]

Inserting an EXH blocking disk in the exhaust passage of a manifold valve can separate the exhaust from the valve so it does not affect the other valves. It can also be used in positive pressure and vacuum pressure mixed manifolds. (2 pieces are required to block both the EA and EB sides of the EXH.)

p. 154

#### ■ Labels for blocking disks

These labels can be used to indicate and confirm where on the manifold the SUP/EXH blocking disk assemblies were inserted. (3 labels of each)

p. 154

### Tube Releasing Tool

■ This tool can be used to remove tubes from ports A and B.

## Vacuum Unit ZK2 Combination Manifold p. 140

JSY3000 valves and ZK2 ejectors can be connected to the same manifold.

This allows for a compact body and reduced wiring/wiring labor.

### Fieldbus compatible

The centralized electrical wiring can be connected to the fieldbus system.

**Lead wire**

### Integrated manifold

Centralized electrical wiring for ejectors and valves (Reduced wiring)

### Individual pressure supply

The individual pressure supply to the valve manifold (JSY3000) and ejector manifold (ZK2) prevents the reduction of vacuum pressure due to pressure interference.

### Specifications

- Max. number of outputs: 32 (Valve + Ejector)
- Valve stations: 2 to 24 stations (Max. number of outputs: 30, Depends on whether single or double)
- Ejector stations: 1 to 8 stations (Max. number of outputs: 16)

### Centralized wiring and piping directions

Wiring and piping for valves and ejectors can be arranged in the same direction. (Wiring method: Terminal block box and lead wire or EX250 and EX260)

- Loosen B tight flat head screw to remove the pilot cover in the direction indicated by the arrow ①.
- Remove the pilot valve mounting screws.
- Remove the pilot valve in the direction indicated by the arrow ②.

\* Assemble by following the removal procedure in reverse.

\*1 Ensure the gasket is mounted, and take care not to bend the socket.

\*2 Be noted for mounting that there are two types of lengths for the pilot valve mounting screws.

\*3 **The pilot valve of the JSY1000 cannot be removed. This is irreplaceable.**

\*1 Weight: "W" is the value for the internal pilot specification, the max. fitting size, and the manifold only. The valve weight is not included. To obtain the weight with valves attached, add the valve weight given on page 35 for the appropriate number of stations.

\*2 The FW type is not available for the JSY1000.

\*3 The FC, PC, PGC, and PHC types are not available for the JSY5000.

\*4 The serial unit weight is included, but the I/O unit weight is not included. Add the weight of the I/O unit for calculation.

## ZK2 Combination Manifold Weight

### Single Unit

Single unit model	Weight [g]
ZK2 (1 station for manifold, Without pressure sensor/switch)	99

### Pressure Sensor/Pressure Switch for Vacuum

Pressure sensor/Pressure switch for vacuum model	Weight [g]
ZK2-PS□-A (Excludes the cable portion weight)	5
ZK2-ZS□-A (Excludes the lead wire with connector weight)	14

### Formula for ZK2 combination manifold weight

$Wz = ① \times n1 + ② + 3 \times n2 + ③$  (n1: JSY3000 stations, n2: ZK2 stations)

JSY3000 P, E port entry	③
D side	158
U side	275
B side	292

The weight "Wz" is the value for the internal pilot specification, the max. fitting size, and the manifold only. To obtain the weight with valves and ejectors mounted, add the valve weight and the weight of the ejector, pressure sensor, and pressure switch for vacuum above, respectively, for the appropriate number of stations.

## Connector Wiring Layout

For both serial and parallel wiring, additional valves are sequentially assigned pins on the connector. This makes it completely unnecessary to disassemble the connector unit.

### ■ Single solenoid valve is installed to all double wiring. (in the case of all double wiring) (Manifold specification sheet is not necessary.)

### ■ Single/double wiring are mixed. (Manifold specification sheet is necessary.)

\* These diagrams are for the purpose of explanation, and differ from the actual connector wiring.

\*1 Double wiring: 2-position single, double, 3-position, and 4-position valves can be used on all manifold stations.

The use of a 2-position single solenoid will result in an unused control signal. If this is not desired, order with a specified layout.

\*2 Specified layout: Indicate the wiring specifications on the manifold specification sheet. (Note that 2-position double, 3-position, and 4-position valves cannot be used where single wiring has been specified.)

\* This also includes the number of blanking plates.

## How to Order Manifold Assembly

### Example (JJ5SY3-10F1-□)

JJ5SY3-10F1-05D-C8 ... 1 set (Type 10 5-station manifold base part no.)  
 \* JSY3100-5U ..... 2 sets (2-position single part no.)  
 \* JSY3200-5U ..... 3 sets (2-position double part no.)  
 \* The asterisk denotes the symbol for the assembly.  
 Prefix it to the part numbers of the valve, etc.

- For the valve arrangement, the valve closest to the D side is considered the 1st station.
- Under the manifold part number, state the valves to be mounted in order starting with the 1st station as shown in the figure. If the arrangement becomes too complicated, specify the details on a manifold specification sheet.

### 6 Manual override

\* Push-turn locking lever type "E" is not available for the JSY1000.

\* **When ordering a valve individually, the base gasket is not included.**

Since the base gasket is attached to the manifold, please order the base gasket separately if it is needed for maintenance. Refer to page 137 for base gasket and mounting screw part numbers.

## ⚠ Caution

If the JSY3000/5000 series is to be continuously energized, please be sure to select the power-saving circuit (continuous duty type) specification. Refer to "Made to Order" on page 156.  
 For the JSY1000 series, only the power-saving circuit specification is available.

## Electrical Wiring Specifications

**D-sub connector**

If alignment is not specified, the internal wiring will be double wiring (connected to SOL. a and SOL. b) regardless of number of stations, valve types, and option types.

\* When using a valve with no polarity, either positive common or negative common can be used.

## Specified Layout

(25 pins)

A mixture of single and double wiring can be specified on the manifold specification sheet. The maximum number of stations is determined according to the number of solenoids. The total number of solenoids should be 24 or less. 1 solenoid is required for the 2-position single, and 2 solenoids for the 2-position double, 3-position, and 4-position.

## Specified Layout

(P, PC: 26 pins)

(PG, PGC: 20 pins)

(PH, PHC: 10 pins)

A mixture of single and double wiring can be specified on the manifold specification sheet. The maximum number of stations is determined according to the number of solenoids. The total number of solenoids should be 24 or less for P and PC, 18 or less for PG and PGC, and 8 or less for PH and PHC. 1 solenoid is required for the 2-position single, and 2 solenoids for the 2-position double, 3-position, and 4-position.

\*1 Double wiring: 2-position single, double, 3-position, and 4-position valves can be used on all manifold stations.

The use of a 2-position single solenoid will result in an unused control signal. If this is not desired, order with a specified layout.

\*2 Specified layout: Indicate the wiring specifications on the manifold specification sheet. (Note that 2-position double, 3-position, and 4-position valves cannot be used where single wiring has been specified.)

\*3 This also includes the number of blanking plates.

## How to Order Manifold Assembly

### Example (JJJSY3-10TC-□)

JJSY3-10TC-05D-C8 ... 1 set (Type 10 5-station manifold base part no.)  
 \* JSY3100-5U ..... 2 sets (2-position single part no.)  
 \* JSY3200-5U ..... 3 sets (2-position double part no.)  
 The asterisk denotes the symbol for the assembly.  
 Prefix it to the part numbers of the valve, etc.

- For the valve arrangement, the valve closest to the D side is considered the 1st station.
- Under the manifold part number, state the valves to be mounted in order starting with the 1st station as shown in the figure. If the arrangement becomes too complicated, specify the details on a manifold specification sheet.

- \* Only "Z" and "NZ" types are available for the JSY1000 series.
- \* When the non-polar common specification type is selected, take measures to prevent surge voltage. For details, refer to page 159.

### 6 Manual override

\* Push-turn locking lever type "E" is not available for the JSY1000.

\* **When ordering a valve individually, the base gasket is not included.**  
 Since the base gasket is attached to the manifold, please order the base gasket separately if it is needed for maintenance. Refer to page 137 for base gasket and mounting screw part numbers.

## ⚠ Caution

If the JSY3000/5000 series is to be continuously energized, please be sure to select the power-saving circuit (continuous duty type) specification. Refer to "Made to Order" on page 156.  
 For the JSY1000 series, only the power-saving circuit specification is available.

## Spring Type Terminal Block "TC" Connection

### Step 1. Remove the terminal block cover.

Loosen the 4 mounting screws (M3) to remove the terminal block cover.

### Step 3. Mount the terminal block cover.

Securely tighten the mounting screws (M3) to the torque shown below only after confirming that the gasket is installed correctly.

Proper tightening torque [N·m]
0.54 to 0.66

• Applicable wire range: Conductor diameter  $\phi 0.5$  to  $\phi 1.2$  mm, Stranded wire AWG24 to 16

### Step 2. The diagram below shows the terminal block wiring.

All stations are provided with double wiring regardless of the mounted valves.

Connect each wire to the power supply side, according to the markings provided inside the terminal block. Be sure to connect the wire with the push button pressed down.

## Electrical Wiring Specifications (IP67 compliant)

If alignment is not specified, the internal wiring will be double wiring (connected to SOL. a and SOL. b) regardless of number of stations, valve types, and option types.

\* When using a valve with no polarity, either positive common or negative common can be used.

## Specified Layout

A mixture of single and double wiring can be specified on the manifold specification sheet. The maximum number of stations is determined according to the number of solenoids. The total number of solenoids should be 32 or less. 1 solenoid is required for the 2-position single, and 2 solenoids for the 2-position double, 3-position, and 4-position.

### Terminal Block "T" Connection

**Step 1. Remove the terminal block cover.**

Loosen the 4 mounting screws (M4) to remove the terminal block cover.

**Step 2. The diagram below shows the terminal block wiring.**

**All stations are provided with double wiring regardless of the mounted valves.**

Connect each wire to the power supply side, according to the markings provided inside the terminal block.

**Step 3. Mount the terminal block cover.**

Securely tighten the screws to the torque shown below only after confirming that the gasket is installed correctly.

Proper tightening torque [N·m]
0.7 to 1.2

- Applicable crimped terminal: 1.25-3S, 1.25Y-3, 1.25Y-3N, 1.25Y-3.5
- Name plate: VVQ5000-N-T
- Drip proof plug assembly (for G3/4): AXT100-B06A

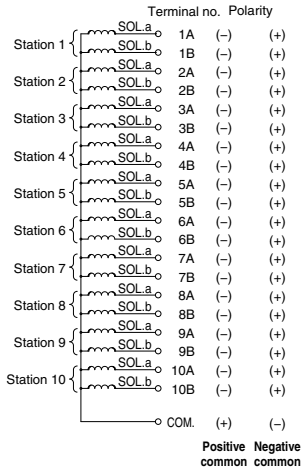

### Electrical Wiring Specifications (IP67 compliant)

If alignment is not specified, the internal wiring will be double wiring (connected to SOL. a and SOL. b) regardless of number of stations, valve types, and option types.

\* When using a valve with no polarity, either positive common or negative common can be used.

#### Standard wiring

#### Specified Layout

A mixture of single and double wiring can be specified on the manifold specification sheet. The maximum number of stations is determined according to the number of solenoids. The total number of solenoids should be 20 or less. 1 solenoid is required for the 2-position single, and 2 solenoids for the 2-position double, 3-position, and 4-position.

- \* The 3/5(E) port is plugged for the built-in silencer type.
- \* When the built-in silencer type is used, keep the exhaust port from coming into direct contact with water or other liquids.
- \* The external pilot specification should be ordered as Made to Order. For details, refer to page 156.

- \*1 Double wiring: 2-position single, double, 3-position, and 4-position valves can be used on all manifold stations. The use of a 2-position single solenoid will result in an unused control signal. If this is not desired, order with a specified layout.
- \*2 Specified layout: Indicate the wiring specifications on the manifold specification sheet. (Note that 2-position double, 3-position, and 4-position valves cannot be used where single wiring has been specified.)
- \*3 This also includes the number of blanking plates.

### 9 Mounting and Option

Symbol	Mounting
Nil	Direct mounting
D□	DIN rail mounting

- \* Enter the number of stations inside □ when it is larger than the number of valve stations. (Refer to "DIN Rail Option" shown below.)
- \* Refer to page 160 for details on securing the DIN rail mounting type manifold.

#### DIN Rail Option

Nil	DIN rail mounting (With DIN rail)
0	DIN rail mounting (Without DIN rail)
3	For 3 stations
⋮	⋮
24	For 24 stations

Specify a length longer than that of the standard rail.

## How to Order Manifold Assembly

### Example (JJ5SY3-10L11-□)

JJ5SY3-10L11-05D-C8- 1 set (Type 10 5-station manifold base part no.)  
 \* JSY3100-5U ..... 2 sets (2-position single part no.)  
 \* JSY3200-5U ..... 3 sets (2-position double part no.)  
 The asterisk denotes the symbol for the assembly.  
 Prefix it to the part numbers of the valve, etc.

- For the valve arrangement, the valve closest to the D side is considered the 1st station.
- Under the manifold part number, state the valves to be mounted in order starting with the 1st station as shown in the figure. If the arrangement becomes too complicated, specify the details on a manifold specification sheet.

- \* Only "Z" and "NZ" types are available for the JSY1000 series.
- \* When the non-polar common specification type is selected, take measures to prevent surge voltage. For details, refer to page 159.

### 6 Manual override

\* Push-turn locking lever type "E" is not available for the JSY1000.

\* **When ordering a valve individually, the base gasket is not included.** Since the base gasket is attached to the manifold, please order the base gasket separately if it is needed for maintenance. Refer to page 137 for base gasket and mounting screw part numbers.

## ⚠ Caution

If the JSY3000/5000 series is to be continuously energized, please be sure to select the power-saving circuit (continuous duty type) specification. Refer to "Made to Order" on page 156.  
 For the JSY1000 series, only the power-saving circuit specification is available.

## Electrical Wiring Specifications

### Lead wire

#### 34 cores

If alignment is not specified, the internal wiring will be double wiring (connected to SOL. a and SOL. b) regardless of number of stations, valve types, and option types.

### Electrical characteristics

Item	Property
Conductor resistance $\Omega/\text{km}, 20^\circ\text{C}$	143 or less
Voltage limit V, 1 minute, AC	2000
Insulation resistance $\text{M}\Omega/\text{km}, 20^\circ\text{C}$	10 or more

\* Cannot be used for movable wiring  
The minimum bending radius of the cable is 55 mm.

Positive common Negative common

\* For negative common specification, a valve for negative common or a valve without polarity should be used.

### Specified Layout

A mixture of single and double wiring can be specified on the manifold specification sheet. The maximum number of stations is determined according to the number of solenoids. The total number of solenoids should be 32 or less. 1 solenoid is required for the 2-position single, and 2 solenoids for the 2-position double, 3-position, and 4-position.

**Electrical Wiring Specifications**

**Lead wire**

\* Cannot be used for movable wiring  
The minimum bending radius of the cable is 45 mm.

**Positive common    Negative common**

\* For negative common specification, a valve for negative common or a valve without polarity should be used.

- \*1 The wireless system is suitable for use only in a country where it is in accordance with the Radio Act and regulations of that country.
- \* I/O unit cannot be mounted without SI unit.
- \* Valve plate which connects manifold and SI unit is included, but it is not mounted to a valve without SI unit. For mounting, refer to the EX600 series on page 129.

<b>9</b>	9 stations

- \* When not selecting an SI unit, the symbol will be "nil."
- \* SI unit is not included in I/O unit stations.
- \* When I/O unit is selected, it is shipped separately, and assembled by users. Refer to the attached operation manual for mounting.

### 6 Valve stations

- \*1 Double wiring: 2-position single, double, 3-position, and 4-position valves can be used on all manifold stations. The use of a 2-position single solenoid will result in an unused control signal. If this is not desired, order with a specified layout.
- \*2 Specified layout: Indicate the wiring specifications on the manifold specification sheet. (Note that 2-position double, 3-position, and 4-position valves cannot be used where single wiring has been specified.)
- \* This also includes the number of blanking plates.

### 7 P, E port entry, SUP/EXH block assembly

P, E port entry	Internal pilot	Internal pilot, Built-in silencer
U side (2 to 10 stations)	<b>U</b>	<b>C</b>

Both sides (2 to 24 stations)	<b>B</b>	<b>F</b>

- \* The 3/5(E) port is plugged for the built-in silencer type.
- \* When the built-in silencer type is used, keep the exhaust port from coming into direct contact with water or other liquids.
- \* The external pilot specification should be ordered as Made to Order. For details, refer to page 156.

- \*1 Indicate the sizes on the manifold specification sheet in the case of "CM."
- \*2 The JSY1000 manifold pitch for C2 and C4 is 6.5 mm, and 9 mm for C6. When CM is selected, the manifold pitch is different depending on the selected fitting.

### 9 Mounting and Option

Symbol	Mounting
<b>Nil</b>	Direct mounting
<input type="checkbox"/>	DIN rail mounting

- \* Enter the number of stations inside  when it is larger than the number of valve stations. (Refer to "DIN Rail Option" shown below.)
- \* Refer to page 160 for details on securing the DIN rail mounting type manifold.

#### DIN Rail Option

Nil	DIN rail mounting (With DIN rail)
<b>0</b>	DIN rail mounting (Without DIN rail)
<b>3</b>	For 3 stations
⋮	⋮
<b>24</b>	For 24 stations

Specify a length longer than that of the standard rail.

- \* If the DIN rail must be mounted without an SI unit, select D0. Refer to L3 of the dimensions for the DIN rail length and order separately. (Refer to page 152 for the DIN rail part number.)

For details on the EX600 Integrated Type (For Input/Output) Serial Transmission System, refer to the **Web Catalog** and the **Operation Manual**. For the part numbers of the SI units to be mounted, refer to pages 129 and 130. (IP40 specifications may be required according to the I/O unit to be selected.) Please download the Operation Manual via the SMC website, <https://www.smcworld.com>

## How to Order Manifold Assembly

### Example (JJ5SY3-10S6□-□)

JSY3100-5U ..... 1 set (Type 10 5-station manifold base part no.)  
 \* JSY3100-5U ..... 2 sets (2-position single part no.)  
 \* JSY3200-5U ..... 3 sets (2-position double part no.)  
 \* EX600-DXPB ..... 1 set I/O unit part number (Station 1)  
 \* EX600-DYPB ..... 1 set I/O unit part number (Station 2)  
 \* The asterisk denotes the symbol for the assembly. Prefix it to the part numbers of the valve, etc.

- For the valve arrangement, the valve closest to the D side is considered the 1st station.
- Under the manifold part number, state the valves to be mounted, then the I/O units in order starting with the 1st station as shown in the figure. If the arrangement becomes too complicated, specify the details on a manifold specification sheet.
- \*1 Do not enter the SI unit part number and the end plate part number together.

**⚠ Caution**  
 If the JSY3000/5000 series is to be continuously energized, please be sure to select the power-saving circuit (continuous duty type) specification. Refer to "Made to Order" on page 156.  
 For the JSY1000 series, only the power-saving circuit specification is available.

- \* Select "U" or "Z" for the valve when the SI unit output polarity is positive common. Select "U" or "NZ" for the valve when the SI unit output polarity is negative common.
- \* Only "Z" and "NZ" types are available for the JSY1000 series.
- \* **When ordering a valve individually, the base gasket is not included.** Since the base gasket is attached to the manifold, please order the base gasket separately if it is needed for maintenance. Refer to page 137 for base gasket and mounting screw part numbers.
- \* Push-turn locking lever type "E" is not available for the JSY1000.

\*1 Double wiring: 2-position single, double, 3-position, and 4-position valves can be used on all manifold stations. The use of a 2-position single solenoid will result in an unused control signal. If this is not desired, order with a specified layout

\*2 Specified layout: Indicate the wiring specifications on the manifold specification sheet.

(Note that 2-position double, 3-position, and 4-position valves cannot be used where single wiring has been specified.)

\* This also includes the number of the blanking plate assembly.

### 7 P, E port entry

<b>U</b>	U side (2 to 10 stations)
<b>D</b>	D side (2 to 10 stations)
<b>B</b>	Both sides (2 to 24 stations)

### 8 SUP/EXH block assembly

<b>Nil</b>	Internal pilot
<b>S</b>	Internal pilot, Built-in silencer

\* The 3/5(E) port is plugged for the built-in silencer type.

\* When the built-in silencer type is used, keep the exhaust port from coming into direct contact with water or other liquids.

\* The external pilot specification should be ordered as Made to Order. For details, refer to page 156.

## How to Order Manifold Assembly

### Example (JJ5SY3-10SAAN□-□)

JJ5SY3-10SAANY2-05D-C6---1 set (Type 10 5-station manifold base part no.)  
 \* JSY3100-5U ..... 3 sets (2-position single part no.)  
 \* JSY3200-5U ..... 2 sets (2-position double part no.)  
 \* EX245-DX1 ..... 1 set I/O module part number  
 \* EX245-DY1 ..... 1 set I/O module part number  
 The asterisk denotes the symbol for the assembly. Prefix it to the part numbers of the valve, etc.

- For the valve arrangement, the valve closest to the D side is considered the 1st station.
- The I/O module station arrangement is numbered starting from the SI unit side.
- Under the manifold part number, state the valves to be mounted, then the I/O modules in order starting with the 1st station as shown in the figure. If the arrangement becomes too complicated, specify the details on a manifold specification sheet.

\*1 Do not enter the SI unit part number and the end plate part number together.

## How to Order Manifolds

**Made to Order**  
(Refer to page 156 for details.)

Specification

### 6 Valve stations

Symbol	Stations	Note
<b>02</b>	2 stations	Double wiring*1
⋮	⋮	
<b>16</b>	16 stations	
<b>02</b>	2 stations	Specified layout*2 (Up to 32 solenoids available)
⋮	⋮	
<b>24</b>	24 stations	

- \*1 Double wiring: 2-position single, double, 3-position, and 4-position valves can be used on all manifold stations. The use of a 2-position single solenoid will result in an unused control signal. If this is not desired, order with a specified layout.
- \*2 Specified layout: Indicate the wiring specifications on the manifold specification sheet. (Note that 2-position double, 3-position, and 4-position valves cannot be used where single wiring has been specified.) When determining the number of valve stations, note that the maximum number of solenoids for the AS-Interface applicable SI unit specification is as follows.
  - 8 in/8 out specification: Max. 8 solenoids
  - 4 in/4 out specification: Max. 4 solenoids
- \* This also includes the number of blanking plates.
- \* For the product without the SI unit (S0), note the maximum number of solenoids of the SI unit that will be mounted. If the layout is specified, indicate it on the manifold specification sheet.

### 9 Mounting and Option

Symbol	Mounting
<b>NII</b>	Direct mounting
<b>D□</b>	DIN rail mounting

- \* Enter the number of stations inside □ when it is larger than the number of valve stations. (Refer to "DIN Rail Option" shown below.)
- \* Refer to page 160 for details on securing the DIN rail mounting type manifold.
- \* DIN rail mounting (D□) is not available for the product without the SI unit (S0).

#### DIN Rail Option

<b>NII</b>	DIN rail mounting (With DIN rail)
<b>0</b>	DIN rail mounting (Without DIN rail)
<b>3</b>	For 3 stations
⋮	⋮
<b>24</b>	For 24 stations

Specify a length longer than that of the standard rail.

- \* Refer to L3 of the dimensions for the DIN rail length and order separately. (Refer to page 152 for the DIN rail part number.)

<b>ZE</b>	EtherNet/IP™ (Negative common)	

- \* Ensure a match with the common specification of the valve to be used.
- \* Input block cannot be mounted without SI unit.
- \* The supply current from the SI unit of AS-Interface applicable 1 power supply system specification to the input block and valve is limited.

### 4 Input block stations

### 3 SI unit (Output polarity, Protocol, Number of outputs, Communication connector)

Symbol (Output polarity)	Number of outputs	Protocol	Communication connector
Positive common (NPN)	Negative common (PNP)		
0*1 Without SI unit			
QA	QAN	DeviceNet®	32
QB	QBN		16
NA	NAN	PROFIBUS DP	32
NB	NBN		16
NC	NCN	CC-Link	32
ND	NDN		16
VA	VAN	EtherCAT	32
VB	VBN		16
DA	DAN	PROFINET	32
DB	DBN		16
FA	FAN	EtherNet/IP™	32

EA	EAN	Ethernet	32
EB	EBN		16
—*2	GAN	POWERLINK	32
—*2	GBN		16
—*2	KAN	IO-Link	32*4 M12

- \*1 Without SI unit, the output polarity is decided by the SI unit used. Ensure a match with the common specification of the valves to be used.
- \*2 Positive common (NPN) type is not available.
- \*3 IP40 for the D-sub applicable communication connector specification.
- \*4 Only the 32 outputs type is available.
- \* DIN rail cannot be mounted without SI unit.

### 7 A, B port size (Metric/One-touch fitting)

Symbol	A, B port	JSY1000	JSY3000	JSY5000
C2 C4 C6 C8 C10 C12	Straight	ø2	●	—

P, E port size (One-touch fittings)		ø8	ø10	ø12

- \*1 Indicate the sizes on the manifold specification sheet in the case of "CM."
- \* The JSY1000 manifold pitch for C2 and C4 is 6.5 mm, and 9 mm for C6. When CM is selected, the manifold pitch is different depending on the selected fitting.

For details on the EX260 Integrated Type (For Output) Serial Transmission System, refer to the **Web Catalog** and the **Operation Manual**. For the part numbers of the SI units to be mounted, refer to page 134. Please download the Operation Manual via the SMC website, <https://www.smcworld.com>

Nil	Internal pilot
S	Internal pilot, Built-in silencer

- \* The 3/5(E) port is plugged for the built-in silencer type.
- \* When the built-in silencer type is used, keep the exhaust port from coming into direct contact with water or other liquids.
- \* The external pilot specification should be ordered as Made to Order. For details, refer to page 156.

### 4 Valve stations

In the case of the 32-output SI unit

Symbol	Stations	Note
02	2 stations	Note
⋮	⋮	⋮
16	16 stations	Double wiring*1
⋮	⋮	⋮
02	2 stations	Specified layout*2 (Up to 32 solenoids available)
⋮	⋮	⋮
24	24 stations	

In the case of the 16-output SI unit

Symbol	Stations	Note
02	2 stations	Note
⋮	⋮	⋮
08	8 stations	Double wiring*1
⋮	⋮	⋮
02	2 stations	Specified layout*2 (Up to 16 solenoids available)
⋮	⋮	⋮
16	16 stations	

- \*1 Double wiring: 2-position single, double, 3-position, and 4-position valves can be used on all manifold stations. The use of a 2-position single solenoid will result in an unused control signal. If this is not desired, order with a specified layout.
- \*2 Specified layout: Indicate the wiring specifications on the manifold specification sheet. (Note that 2-position double, 3-position, and 4-position valves cannot be used where single wiring has been specified.)
- \* This also includes the number of blanking plates.
- \* For the product without the SI unit (S0), note the maximum number of solenoids of the SI unit that will be mounted. If the layout is specified, indicate it on the manifold specification sheet.

### 8 Mounting and Option

Symbol	Mounting
Nil	Direct mounting
D□	DIN rail mounting

- \* Enter the number of stations inside □ when it is larger than the number of valve stations. (Refer to "DIN Rail Option" shown below.)
- \* Refer to page 160 for details on securing the DIN rail mounting type manifold.
- \* DIN rail mounting (D□) is not available for the product without the SI unit (S0).

#### DIN Rail Option

Nil	DIN rail mounting (With DIN rail)
0	DIN rail mounting (Without DIN rail)
3	For 3 stations
⋮	⋮
24	For 24 stations

Specify a length longer than that of the standard rail.

- \* Refer to L3 of the dimensions for the DIN rail length and order separately. (Refer to page 152 for the DIN rail part number.)

## How to Order Manifold Assembly

### Example (JJ5SY3-10SNAN-□)

JJ5SY3-10SNAN-05D-C8 -- 1 set (Type 10 5-station manifold base part no.)  
 \* JSY3100-5U ..... 2 sets (2-position single part no.)  
 \* JSY3200-5U ..... 3 sets (2-position double part no.)  
 The asterisk denotes the symbol for the assembly.  
 Prefix it to the part numbers of the valve, etc.

- For the valve arrangement, the valve closest to the D side is considered the 1st station.
- Under the manifold part number, state the valves to be mounted in order starting with the 1st station as shown in the figure. If the arrangement becomes too complicated, specify the details on a manifold specification sheet.

C		N.C./N.O.

### 5 Light/surge voltage suppressor and common specification

Symbol	With light	Surge voltage suppressor	Common specification
U	●	●	Non-polar
Z			Positive common
NZ			Negative common

- Select "U" or "Z" for the valve when the SI unit output polarity is Nil (positive common). Select "U" or "NZ" for the valve when the SI unit output polarity is N (negative common).
- Only "Z" and "NZ" types are available for the JSY1000 series.

### 6 Manual override

\* Push-turn locking lever type "E" is not available for the JSY1000.

### \* When ordering a valve individually, the base gasket is not included.

Since the base gasket is attached to the manifold, please order the base gasket separately if it is needed for maintenance. Refer to page 137 for base gasket and mounting screw part numbers.

## ⚠ Caution

If the JSY3000/5000 series is to be continuously energized, please be sure to select the power-saving circuit (continuous duty type) specification. Refer to "Made to Order" on page 156. For the JSY1000 series, only the power-saving circuit specification is available.

# JSY1000/3000/5000 Series

## Using the safety communication protocol

Refer to the EX260 Web Catalog for details on units that support the safety communication protocol. When using a manifold valve within an ISO 13849-compliant safety system, the device needs to be considered from both the pneumatic circuit and the electric side. Devices (including valves) need to be selected based on whether their functions are in line with the safety level of the equipment as a whole. The use of valves that have been validated as being compliant with ISO 13849-2 may be required. For details on valves that have been validated, please contact SMC. In addition, refer to "Safety Instructions" for precautions on model selection.

Refer to page 104 for details on manifolds that support Fieldbus and Industrial Ethernet.

- \*1 Indicate the sizes on the manifold specification sheet in the case of "CM."
- \* The JSY1000 manifold pitch for C2 and C4 is 6.5 mm, and 9 mm for C6. When CM is selected, the manifold pitch is different depending on the selected fitting.

### 8 Mounting and Option

Symbol	Mounting
Nil	Direct mounting
D□	DIN rail mounting

- \* Enter the number of stations inside □ when it is larger than the number of valve stations. (Refer to "DIN Rail Option" shown below.)
- \* Refer to page 160 for details on securing the DIN rail mounting type manifold.
- \* DIN rail mounting (D□) is not available for the product without the SI unit (S0).

### 3 SI unit (Output polarity, Protocol, Number of outputs, Communication connector)

Symbol (Output polarity)	Protocol	Number of outputs	Communication connector
Positive common (NPN)	PROFIsafe	32*3	M12
Negative common (PNP)			
0*1	Without SI unit		
—*2	FPN		

\*1 Without SI unit, the output polarity is decided by the SI unit used.

Ensure a match with the common specification of the valves to be used.

\*2 Positive common (NPN) type is not available.

\*3 Only the 32 outputs type is available.

\* DIN rail cannot be mounted without SI unit.

### DIN Rail Option

Nil	DIN rail mounting (With DIN rail)
0	DIN rail mounting (Without DIN rail)
3	For 3 stations
⋮	⋮
24	For 24 stations

Specify a length longer than that of the standard rail.

- \* Refer to L3 of the dimensions for the DIN rail length and order separately. (Refer to page 152 for the DIN rail part number.)

For details on the EX260 Integrated Type (For Output) Serial Transmission System, refer to the Web Catalog and the Operation Manual. For the part numbers of the SI units to be mounted, refer to page 134. Please download the Operation Manual via the SMC website, <https://www.smcworld.com>

[Validated product examples]

Please contact SMC for further details as supported variations are continually being added.

\* 2-position double of rubber seal and manual override with locking function (D, E type) are excluded, because they don't comply with safety standard.

3	JSY3000
5	JSY5000

### 3 SI unit

0	Without SI unit	
Q	DeviceNet®	(Positive common NPN)
R1	OMRON CompoBus/S	16 outputs
R2	(Positive common NPN)	8 outputs
V	CC-Link (Positive common NPN)	
ZB*1	CompoNet®	Positive common NPN
ZBN*1		Negative common PNP

\*1 The communication connector (for the opposite side) is not provided. Please order it separately.

\* Ensure a match with the common specification of the valve to be used.

### 2 Type

10	Side ported
----	-------------

### 5 P, E port entry

U	U side (2 to 10 stations)
D	D side (2 to 10 stations)
B	Both sides (2 to 16 stations)

### 6 SUP/EXH block

Nil	Internal pilot
S	Internal pilot, Built-in silencer

\* The 3/5(E) port is plugged for the built-in silencer type.

\* The external pilot specification should be ordered as Made to Order. For details, refer to page 156.

Made to Order

### 4 Valve stations

Symbol	Stations	Note
02	2 stations	Double wiring*1
:	:	
08	8 stations	
02	2 stations	Specified layout*2 (Up to 16 solenoids available)
:	:	
16	16 stations	

\*1 Double wiring: 2-position single, double, 3-position, and 4-position valves can be used on all manifold stations.

The use of a 2-position single solenoid will result in an unused control signal. If this is not desired, order with a specified layout.

\*2 Specified layout: Indicate the wiring specifications on the manifold specification sheet. (Note that 2-position double, 3-position, and 4-position valves cannot be used where single wiring has been specified.)

\* This also includes the number of blanking plates.

\* Since R2 type SI unit has 8 outputs, note that up to 8 solenoids can be accommodated.

### 7 A, B port size (Metric/One-touch fitting)

Symbol	A, B port	JSY1000	JSY3000	JSY5000
C2	ø2	●	—	—
C4	ø4	●	—	—

C12	ø12	—	—	●
CM*1	Straight port, mixed sizes	●	●	●
P, E port size (One-touch fittings)		ø8	ø10	ø12

\*1 Indicate the sizes on the manifold specification sheet in the case of "CM."

\* The JSY1000 manifold pitch for C2 and C4 is 6.5 mm, and 9 mm for C6. When CM is selected, the manifold pitch is different depending on the selected fitting.

### 8 Mounting and Option

Symbol	Mounting
Nil	Direct mounting
D□	DIN rail mounting

\* Enter the number of stations inside □ when it is larger than the number of valve stations. (Refer to "DIN Rail Option" shown below.)

\* Refer to page 160 for details on securing the DIN rail mounting type manifold.

#### DIN Rail Option

Nil	DIN rail mounting (With DIN rail)
0	DIN rail mounting (Without DIN rail)
3	For 3 stations
:	:
16	For 16 stations

Specify a length longer than that of the standard rail.

\* If the DIN rail must be mounted without an SI unit, select D0. Refer to L3 of the dimensions for the DIN rail length and order separately. (Refer to page 152 for the DIN rail part number.)

For details on the EX120 Integrated Type (For Output) Serial Transmission System, refer to the **Web Catalog** and the **Operation Manual**. For the part numbers of the SI units to be mounted, refer to page 135. Please download the Operation Manual via the SMC website, <https://www.smcworld.com>

## How to Order Manifold Assembly

### Example (JJ5SY3-10S3V-□)

JJ5SY3-10S3V-05D-C8 ...1 set (Type 10 5-station manifold base part no.)  
 \* JSY3100-5U .....2 sets (2-position single part no.)  
 \* JSY3200-5U .....3 sets (2-position double part no.)  
 The asterisk denotes the symbol for the assembly.  
 Prefix it to the part numbers of the valve, etc.

- For the valve arrangement, the valve closest to the D side is considered the 1st station.
- Under the manifold part number, state the valves to be mounted in order starting with the 1st station as shown in the figure. If the arrangement becomes too complicated, specify the details on a manifold specification sheet.

### 5 Light/surge voltage suppressor and common specification

Symbol	With light	Surge voltage suppressor	Common specification
U			Non-polar
Z	●	●	Positive common
NZ			Negative common

- Select "U" or "Z" for the valve when the SI unit specification is positive common. Select "U" or "NZ" for the valve when the SI unit specification is ZBN (negative common).
- Only "Z" and "NZ" types are available for the JSY1000 series.

### 6 Manual override

\* Push-turn locking lever type "E" is not available for the JSY1000.

- When ordering a valve individually, the base gasket is not included.** Since the base gasket is attached to the manifold, please order the base gasket separately if it is needed for maintenance. Refer to page 137 for base gasket and mounting screw part numbers.

## ⚠ Caution

If the JSY3000/5000 series is to be continuously energized, please be sure to select the power-saving circuit (continuous duty type) specification. Refer to "Made to Order" on page 156. For the JSY1000 series, only the power-saving circuit specification is available.

## Manifold Exploded View [Common Parts]

### Type 10: How to Increase Connector Type Manifolds

- 1 Loosen the U-side tension bolt (a), and remove the (B) SUP/EXH end block assembly.
- 2 Screw in (4) tie-rods for additional stations to the (5) tie-rod of the manifold.  
 (Screw them in until there is no gap between the tie-rods.)
- 3 Connect the (A) manifold block assembly and (B) SUP/EXH end block assembly to be added, and tighten the tension bolt (a).

<For JSY3000>

**Tightening torque for tension bolt (a) (M3): 0.8 N-m**

### ⚠ Caution

1. Be sure to shut off the power and air supplies before disassembly.  
 Furthermore, since air may remain inside the actuator, piping, and manifold, confirm that the air is completely exhausted before performing any work.
2. When disassembly and assembly are performed, air leakage may result if the tightening of the tension bolt is inadequate.

\*1 Double wiring: 2-position single, double, 3-position, and 4-position valves can be used on all manifold stations. The use of a 2-position single solenoid will result in an unused control signal.

\*2 Specified layout: Indicate the wiring specifications on the manifold specification sheet. (Note that 2-position double, 3-position, and 4-position valves cannot be used where single wiring has been specified.)

\* The total number of solenoids for the valve and ejector should not exceed the number of output points. (Number of ejector solenoids: 2 per station)

\* This also includes the number of blanking plates.

\* For models without an SI unit (S0), note the number of output points of the SI unit that will be mounted.

Specify the valve manifold and mounted valve part numbers as well as the ejector manifold and mounted ejector part numbers for ordering. Refer to the bottom of this page for an order example.

Z	•	•	Positive common
NZ	•	•	Negative common

- \* When the non-polar common specification type is selected, take measures to prevent surge voltage. For details, refer to page 159.
- \* For fieldbus compatible manifolds, ensure that the output polarity of the SI unit matches the common specification of the valve. Note that the common specification of the ejector is non-polar.

#### 6 Manual override

- \* **When ordering a valve individually, the base gasket is not included.**  
Since the base gasket is attached to the manifold, please order the base gasket separately if it is needed for maintenance. Refer to page 137 for base gasket and mounting screw part numbers.

## How to Order Manifold Assembly

### Example (JJ5SY3-10SFA-□-M)

Refer to pages 121 and 122 for how to order ZK2 vacuum units.

- JJ5SY3-10SFA-05D-C8-M ... 1 set (Type 10 5-station manifold base part no.)
- \* JSY3100-5U ..... 2 sets (2-position single valve part no.)
- \* JSY3200-5U ..... 3 sets (2-position double valve part no.)
- \* ZZK204A-A1S0 ..... 1 set (Ejector manifold part no.)
- \* ZK2C12K5NC1A-08 ..... 4 sets (Ejector unit part no.)

→ The asterisk denotes the symbol for the assembly. Prefix it to the part numbers of the ejector manifold, valve, etc.

- For the valve and ejector arrangement, the valves closest to the D side are considered the 1st stations respectively.
- Under the manifold part number, state the valves, ejector manifold, and ejector units to be mounted in order starting with the 1st station as shown in the figure.
- Complex exhaust and individual port exhaust cannot be mixed in the ejector manifold.
- If the arrangement becomes too complicated, specify the details on a manifold specification sheet.

### ⚠ Caution

If the product is to be continuously energized, please be sure to select the power-saving circuit (continuous duty type) specification. Refer to "Made to Order" on page 156.

# JSY3000 Series

## Optional Specifications/Functions/Applications

Symbol	Type	Function/Application
E	Screwdriver operation type long lock nut 	· Used when the port position is close to the manifold's individual supply and needle adjustment is difficult
J	Round lock nut 	· Thicker than the standard hexagon type · More suitable for hand tightening · The round lock nut improves operability when the manifold or exhaust port type is used.
K	Screwdriver operation type 	· The slotted type allows for fine adjustment when the manifold or exhaust port type is used.
L	Manifold individual supply specification 	· For adjusting the manifold's supply pressure and the vacuum pressure reached by each ejector individually
P	With manifold common release pressure supply (PD) port	· When selecting option "D" (with common release pressure supply (PD) port), a pressure which is different from the common PV can be supplied to the common PD.
W	With exhaust interference prevention valve 	· When ejectors are operated individually, exhausted air may flow backward from the V ports of ejectors that are turned off. The exhaust interference prevention valve prevents this backflow.

Specify the valve manifold and mounted valve part numbers as well as the ejector manifold and mounted ejector part numbers for ordering. Refer to page 141 for an order example.

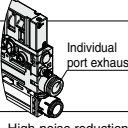

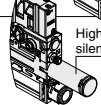

For ejector specifications, refer to the Web Catalog.

#### ⚠ Caution

- Be sure to shut off the power and air supplies before disassembly.  
Furthermore, since air may remain inside the actuator, piping and manifold, confirm that the air is completely exhausted before performing any work.
- When disassembly and assembly are performed, air leakage may result if the tightening of the cover and port block assemblies are inadequate.

## How to Increase Manifold Stations

[To increase the number of stations from an odd number (1, 3, 5, 7) to an even number (2, 4, 6, 8)]  
(Odd numbered stations have a vacant lead wire for one station, so additional orders are not required.)

- 1) Remove the tension bolt.
- 2) Remove end plate U.
- 3) Remove the valve assembly from the single unit for manifold to be added.
- 4) Remove the switch assembly if there is one. (Be careful not to drop the O-ring. Refer to Fig. 1.)
- 5) Remove junction box B (top) using a precision screwdriver. (Refer to Fig. 2.)
- 6) Mount the extra connector to junction box B. (Refer to Fig. 3.) (Engage the recess of the connector and the protruding part of junction box B. Refer to Fig. 3-A.)
- 7) Mount the single unit for manifold to be added to the end surface on the U side.
- 8) Mount end plate U with tension bolts of the appropriate length for the number of stations required. (Tightening torque: 0.75 N·m)
- 9) Mount junction box B to junction box A.
- 10) Mount the valve assembly. (Tightening torque: 0.15 N·m)
- 11) For products with a switch, mount the switch assembly. (Be careful not to drop the O-ring. Tightening torque: 0.08 to 0.10 N·m)

[To increase the number of stations from an even number to an odd number or to increase by 2 stations or more]

- 1) Remove the valve assemblies from all stations. (Remove from the single units to be added also.)
- 2) Remove the switch assemblies if there are any. (Be careful not to drop the O-rings. Refer to Fig. 1.)
- 3) Remove junction box B (top) from all stations using a precision screwdriver. (Refer to Fig. 2.) (Remove each junction box B from the D side.)
- 4) Remove all connectors mounted to each junction box B. (Be careful not to break the connector clips.)
- 5) Remove the tension bolts.
- 6) Remove the end plate D assembly.
- 7) Remove the linkage-printed circuit board, and then remove the connector assembly. (Refer to Fig. 4.)
- 8) Connect the lead wire assembly. (Refer to Fig. 5.)
- 9) Mount the connector assembly and linkage-printed circuit board. (Refer to Fig. 4.)
- 10) Remove end plate U. (Be careful not to drop the gasket.)
- 11) Mount the single units for manifold to be added to the end surface on the U side. (Do not let the gasket get caught.)
- 12) Mount end plates U and D with tension bolts of the appropriate length for the number of stations required. (Tightening torque: 0.75 N·m)
- 13) Mount the connectors for all stations to each junction box B. (Refer to Fig. 3.) (Engage the recess of the connector and the protruding part of junction box B. Refer to Fig. 3-A.)
- 14) Mount each junction box B to each junction box A. Push the wires down and mount each junction box B to each junction box A starting with the connector station numbers on the U side. (Refer to Fig. 3.) (Do not let the lead wire get caught.)
- 15) Mount the valve assemblies. (Tightening torque: 0.15 N·m)
- 16) For products with a switch, mount the switch assemblies. (Be careful not to drop the O-rings. Tightening torque: 0.08 to 0.10 N·m)

## How to Increase Manifold Stations: Vacuum Ejector Manifold for JSY3000

Connect the lead wire assembly to the positions shown in the diagram below.

- ⚠ Caution**
- 1) After inserting each pin, confirm that the pin is locked by lightly pulling the lead wire.
  - 2) Do not pull the lead wire forcefully when connecting. Also, take care that lead wires do not get caught between manifolds when mounting end plates U and D.

### Wiring

Procedure) A station number is indicated on the connector of the lead wire assembly. Refer to the pin arrangement and insert the pins starting with black and then alternating between white and black from the top for the supply valves and the release valves. Also, starting from the bottom, insert the pins according to the corresponding station number for the common.

Manual override	Push-turn locking slotted type
-----------------	--------------------------------

\* If you want to lock the manual override, push it down until it stops, and then turn it 90° clockwise. Be careful to avoid turning it without pushing it all the way down as this may result in spacer damage, air leakage, or another form of malfunction.

To release the manual override, turn it counterclockwise. When turning the manual override, do not apply more torque than necessary. (0.1 N·m)

#### [How to mount SUP stop valve spacer with residual pressure release valve]

Mount the plug-in spacer to the manifold block. Insert the SUP stop valve mounting screw into the spacer screw hole, and mount it to the manifold block.

Tighten the SUP stop valve mounting screw to the specified tightening torque. Mount the valve and tighten the valve mounting screws to the specified tightening torque after mounting the SUP stop valve spacer with residual pressure release valve.

- \* Be aware that the square nut may come off. If the square nut comes off, attach it to the spacer as shown in the drawing.
- \* Tightening with a hexagon wrench is possible with the square nut attached.
- \* This product is only for internal pilot specifications, as the external pilot air cannot be shut off.
- \* If the product is equipped with a 3-position closed center, residual pressure cannot be released, so use in combination with a 3-port valve, which can be connected to the 4(A), 2(B) piping port.
- \* Note that other spacer combinations are not possible.

### ■ SUP/EXH blocking disk

#### [SUP blocking disk]

Inserting an SUP blocking disk in the pressure supply passage of a manifold valve can allow for the use of 2 different pressures (high and low) in 1 manifold.

#### [EXH blocking disk]

Inserting an EXH blocking disk in the exhaust passage of a manifold valve can separate the exhaust from the valve so it does not affect the other valves. It can also be used in positive pressure and vacuum pressure mixed manifolds. (2 pieces are required to block both the EA and EB sides of the EXH.)

Be sure to read this before handling the products.

Refer to page 7 for safety instructions and pages 8 to 14 for 3/4/5 port solenoid valve precautions.

## Environment

### Warning

1. Do not use valves in atmospheres of corrosive gases, chemicals, sea water, water, water vapor, or where there is direct contact with any of these.
2. Products compliant with IP67 enclosures (based on IEC 60529) are protected against dust and water, however, these products cannot be used in water. If using in an environment that is exposed to water and dust splashes, take measures such as using a protective cover.
3. When using built-in silencer type manifold with an IP67 enclosure, keep the exhaust port of the silencer from coming into direct contact with water or other liquids.

## Valve Mounting

### Caution

Mount it so that there is no slippage or deformation in gaskets, and tighten with the tightening torque as shown on the right.

Series	Thread size	Tightening torque
JSY1000	M1.4	0.06 N·m
JSY3000	M2	0.16 N·m
JSY5000	M3	0.8 N·m

## Manual Override

### Warning

Manual override is used to switch the main valve without inputting an electrical signal for the valve. When manual operation is performed, the connected actuator will start operating, so be sure to confirm that it is safe to operate beforehand.

#### Non-locking push type

Push down on the manual override button until it stops.

#### Push-turn locking slotted type [D type]

Push down on the manual override with a small flat head screwdriver until it stops, and then turn it 90° clockwise. The manual override is then locked. To release it, turn it counterclockwise.

If it is not turned, it can be operated the same way as the non-locking push type.

## Manual Override

### Warning

#### Push-turn locking lever type [E type] (Only for the JSY3000/5000)

Push down on the manual override by finger until it stops, and then turn it 60° clockwise. The manual override is then locked. To release it, turn it counterclockwise. If it is not turned, it can be operated the same way as the non-locking push type.

Carefully check the manual override projection amount.  
Max. (at OFF): 3.7 mm

### Caution

Do not apply excessive torque when turning the manual override. [0.1 N·m]  
When locking the manual override, be sure to push it down before turning. Turning without first pushing it down can cause damage to the manual override and other trouble such as air leakage, etc.

## Used as a 3-Port Valve

### Caution

#### In case of using a 5-port valve as a 3-port valve

The JSY1000/3000/5000 series can be used as normally closed (N.C.) or normally open (N.O.) 3-port port valves by closing one of the cylinder ports 4(A) or 2(B) with a plug. However, they should be used with the exhaust ports kept open. Use them when a double solenoid type 3-port valve is required.

Plug position		B port	A port
Type of actuation		N.C.	N.O.
Number of solenoids	Single	(A)4 2(B)  (EA)5 1 3(EB) (P)	(A)4 2(B)  (EA)5 1 3(EB) (P)
	Double	(A)4 2(B)  (EA)5 1 3(EB) (P)	(A)4 2(B)  (EA)5 1 3(EB) (P)

##### Single solenoid

##### Double solenoid

\* Non-polar type is not available for the JSY1000.

#### ■ With power-saving circuit

##### (JSY3000/5000 series products are made to order.)

Power consumption is decreased to approx. 1/2.5 to 1/4 of the amount consumed at startup by reducing the wattage required to hold the valve in an energized state. (Effective energizing time is over 67 ms at 24 VDC.)

Electric circuit diagram  
(With power-saving circuit)  
In the case of single solenoid

The circuit shown to the left reduces the power consumption for holding in order to save energy. Refer to the electrical power waveform as shown below.

#### <Electrical power waveform with power-saving circuit>

· Since the voltage will drop by approx. 0.5 V due to the transistor, pay attention to the allowable voltage fluctuation. (For details, refer to the solenoid specifications of each type of valve.)

#### Residual voltage of the surge voltage suppressor

\* If a varistor or diode surge voltage suppressor is used, there is some residual voltage to the protection element and rated voltage. Therefore, refer to the table below and pay attention to the surge voltage protection on the controller side. Also, since the response time does change, refer to the valve specifications on page 35.

#### Residual Voltage

Surge voltage suppressor	24 VDC
Z	Approx. 1 V
U	Approx. 47 V

#### Continuous Duty

### ⚠ Caution

If a valve is energized continuously for long periods of time, the rise in temperature due to heat-up of the coil assembly may cause a decline in solenoid valve performance, reduce service life, or have adverse effects on peripheral equipment. If the valve is energized continuously for long periods of time, be sure to use a valve with power-saving circuit. In particular, if three or more adjacent stations on the manifold are energized simultaneously for extended periods of time or if the valves on A side and B side are energized simultaneously for long periods of time, take special care as the temperature rise will be greater.

#### Energization of a 2-Position Double Solenoid Valve

### ⚠ Caution

To avoid operation failure, do not energize the A side and B side of 2-position double solenoid valve at the same time.

# JSY1000/3000/5000 Series Specific Product Precautions 3

Be sure to read this before handling the products.

Refer to page 7 for safety instructions and pages 8 to 14 for 3/4/5 port solenoid valve precautions.

## Countermeasure for Surge Voltage Intrusion

### ⚠ Caution

#### ■ Surge voltage intrusion

With non-polar type valves, at times of sudden interruption of the loading power supply, such as emergency shutdown, surge voltage intrusion may be generated from loading equipment with a large capacity (power consumption), and the valve in a de-energized state may switch over (see Figure 1). When installing a breaker circuit for the loading power supply, consider using a valve with polarity (with polarity protection diode), or install a surge absorption diode between the loading equipment COM line and the output equipment COM line (see Figure 2).

Figure 1. Surge intrusion circuit example (NPN outlet example) (24 VDC)

Figure 2. Surge intrusion countermeasure example (NPN outlet example) (24 VDC)

## Light Indication

### ⚠ Caution

When equipped with indicator light and surge voltage suppressor, the light window turns orange when solenoid a is energized, and it turns green when solenoid b is energized.

<JSY1000 series>

<JSY3000/5000 series>

## Changing Connector Entry Direction

### ⚠ Caution

Connector direction for electrical entry of D-sub connector and flat ribbon cable <IP40> can be changed. If the directional change is required, slide the lever on the side of the connector block to the FREE position, and then change the direction as shown in the figure. Also, before connecting the connector, be sure to return the lever to the LOCK position. (If the lever is difficult to slide, move the connector a little bit to make it easier to slide the lever.)

If an excessive force is applied on the connector in the LOCK position, the connector block may be damaged. Also, using in such a way that the connector floats in the FREE position, it may cause the lead wire, etc., to break.

\* Direction cannot be changed for D-sub connector <IP67> or compact type.

# JSY1000/3000/5000 Series Specific Product Precautions 4

Be sure to read this before handling the products.

Refer to page 7 for safety instructions and pages 8 to 14 for 3/4/5 port solenoid valve precautions.

## Manifold Indication Symbol

### ⚠ Caution

The letter "S" is indicated on manifold blocks for the JSY series as shown below. This indication refers to the type of substrate (single wiring) inside the manifold blocks. When there is no symbol, double wiring is used.

When the manifold specification sheet does not include a wiring specification, all stations will be double wiring specification. In this case, single and double solenoid valves can be mounted in any position, but when a single valve is used, there will be an unused control signal. To avoid this, indicate positions of manifold blocks for single wiring specification and double wiring specification on a manifold specification sheet. (Note that double, 3- or 4-position valves cannot be used for manifolds blocks with single wiring specification [S].)

## Substrate inside Manifolds

### ⚠ Caution

The substrate inside of manifolds cannot be taken apart. Attempting to do so may damage parts.

## Securing the DIN Rail Mounting Type Manifold

### ⚠ Caution

- When the manifold is secured with bolts on a mounting surface, etc., it can be operated just by securing both ends of the DIN rail if the bottom surface of the DIN rail is entirely in contact with the mounting surface when mounted horizontally. However, if it is used with other mounting or with side or reverse mounting, secure the DIN rail with bolts at regular intervals. As a guide, insert bolts in 2 locations for 2-5 stations, 3 locations for 6-10 stations, 4 locations for 11-15 stations, 5 locations for 16-20 stations, and 6 locations for 21-24 stations.
- When using the manifold with DIN rail in an environment where any vibration or impact is applied to it, the DIN rail itself may be broken. In particular, if the installation surface vibrates when mounting the manifold on the wall or if a load is directly applied to the manifold, the DIN rail may be broken, causing the manifold to drop. When any vibration, impact, or load is applied to the manifold, be sure to use the direct mounting manifold.

## How to Replace One-touch Fittings

### ⚠ Caution

By replacing One-touch fittings of manifold base, it is possible to change the connection diameter of the 4(A), 2(B), 1(P), 3/5(E) ports. When replacing the One-touch fittings, remove the clip or the plate before pulling the One-touch fittings off. Mount the One-touch fittings by following the removal procedure in reverse.

Use caution as it may cause air leakage if the clip and the plate are not inserted securely enough when they are switched. Refer to page 151 for part numbers of One-touch fittings.

#### ■ Connector connecting base

- \* In order to replace C2 or C4 with C6 for the JSY1000 series, the manifold block assembly needs to be replaced. Please select the manifold block assembly on page 137.
- \* Refer to page 151 for One-touch fitting, clip, and port plate part numbers.

## Other Tube Brands

### ⚠ Caution

1. When using other than SMC brand tube, confirm that the following specifications are satisfied with respect to the tube outside diameter tolerance.

- |                      |                                       |
|----------------------|---------------------------------------|
| 1) Nylon tube        | within $\pm 0.1$ mm                   |
| 2) Soft nylon tube   | within $\pm 0.1$ mm                   |
| 3) Polyurethane tube | within $+0.15$ mm<br>within $-0.2$ mm |

Do not use tube which do not meet these outside diameter tolerances. It may not be possible to connect them, or they may cause other trouble, such as air leakage or the tube pulling out after connection.

## One-touch Fittings

### ⚠ Caution

■ Tube attachment/detachment for One-touch fittings

#### 1) Tube attachment

- Take a tube having no flaws on its periphery and cut it off at a right angle. When cutting the tube, use tube cutters TK-1, 2, or 3. Do not use pliers, nippers, scissors, etc. If cutting is done with tools other than tube cutters, the tube may be cut diagonally or become flattened, etc., making a secure installation impossible, and causing problems such as the tube pulling out after installation or air leakage. Allow some extra length in the tube.
- Grasp the tube and push it in slowly, inserting it securely all the way into the fitting.
- After inserting the tube, pull on it lightly to confirm that it will not come out. If it is not installed securely all the way into the fitting, this can cause problems such as air leakage or the tube pulling out.

#### 2) Tube detachment

Use the release tool when the removal of tube is difficult due to the tube size. Refer to page 151 for releasing tools.

- Push in the release button sufficiently, pushing its collar equally around the circumference.
- Pull out the tube while holding down the release button so that it does not come out. If the release button is not pressed down sufficiently, there will be increased bite on the tube and it will become more difficult to pull it out.
- When the removed tube is to be used again, cut off the portion which has been chewed before reusing it. If the chewed portion of the tube is used as is, this can cause trouble such as air leakage or difficulty in removing the tube.

## Fixing Method of JSY1000 Series Clamp Bracket

### ⚠ Caution

The clamp bracket fixing method for the JSY1000 series is different depending on wiring.

#### ■ Wiring

<For D-sub connector/Flat ribbon cable/Spring type terminal block box/Lead wire/EX260/EX120>

- When the DIN rail is not accommodated in the clamp bracket, loosen the DIN rail holding screw once and insert the DIN rail.

<For Terminal block box/EX600/EX250>

- If the tightening torque of the holding screws is too much, the SUP/EXH end block will be broken.

## Installation

### ⚠ Caution

Even though the inlet pressure is within the operating pressure range, when the piping diameter is restricted due to size reduction of supply port (P), the flow will be insufficient. In this case, the valve does not switch completely and the cylinder may malfunction.

Spacer Type Ejector is connection to both A port and B port. (See p. 161-4 circuit diagram). One of them can be connected to vacuum pad and the other to pressure switch without a branch piping to manifold. When only one of them is turned piping, be sure to turn plug the unused port.

\* Refer to "Ejector Specifications" on page 161-2 for the max. number of ejector stations that can operate simultaneously.

The following solenoid is recommended for mounting of spacer type ejector.

JSY11M-EP-□A-10S□		1.0			21	52	80

\*1 The values indicating characteristics are representative values and may vary depending on the atmospheric pressure (weather, altitude, etc.).

\*2 Value at supply pressure.

\*3 Actual values under SMC's measurement conditions (Not guaranteed values)

\*4 This is a value obtained with a single ejector performing vacuum suction in the silencer air discharge system.

## Max. Number of Manifold Stations that Can Operate Simultaneously [units]

Model	Max. number of manifold stations that can operate simultaneously [units] <sup>*1, *2, *3</sup>

\*1 Value at supply pressure.

\*2 Actual values under SMC's measurement conditions (Not guaranteed values)

\*3 This is the maximum number of stations that can simultaneously operate when vacuum is simultaneously generated by the ejectors only (excluding the solenoid valve for actuator).

When a solenoid valve for actuator and a spacer type ejector are mounted on the same manifold, simultaneously operating them may affect each other and degrade their performances.

As a countermeasure against this problem, by using a single SUP spacer (mountable only on the solenoid valve for actuator) and a SUP blocking disk, separate air supply to those components (refer to pages 153 and 154).

## How to Order Manifold Assembly (When mixed manifold block range 6.5 mm/9 mm is used)

### Example (JJ5SY1-10F1-□-CM)

\* Manifold model JJ5SY1-10□-□-C2/C4 cannot be equipped with spacer type ejector.

JJ5SY1-10F1-05D-CM	..... 1 set (Type10 5stations manifold base product number/manifold block width mixed specifications)	
* JSY1100T-5Z	..... 1 set (2-position single valve)	* Manifold specification sheet is required.
* JSY1300T-5Z	..... 1 set (3-position closed center)	
* JSY1100T-5Z	..... 1 set (Supply valve: 2-position single valve)	
* JSY11M-EP-1A-07SC6	..... 1 set (Spacer type ejector: Supply valve [N.C.]/Port exhaust)	
* JSY1100T-5Z	..... 1 set (Supply valve: 2-position single valve)	
* JSY11M-EP-1A-07S	..... 1 set (Spacer type ejector: Supply valve [N.C.]/Silencer exhaust)	
* JSY1300T-5Z	..... 1 set (Supply/Release valve: 3-position closed center valve)	
* JSY11M-EP-3A-07S-N	..... 1 set (Spacer type ejector: Supply valve [N.C.]/Release valve [N.C.]/Silencer exhaust: With vacuum break flow adjusting unit)	

→ The asterisk denotes the symbol for the assembly.  
 \* Prefix the product number of the mounted valve or spacer type ejector with "s."

- For the valve arrangement, the valves closest to the D side are considered the 1st stations respectively.
- Below the manifold part number, write down the valves and spacer type ejectors to be mounted in order from the first station as shown in the figure.
- Write down spacer type ejectors next to the valves they are to be combined with.
- Spacer type ejector can only be mounted on 9 mm wide manifold block.
- If the layout is complicated or you want to specify a desired layout, please specify it by means of the manifold specification sheet.

### Example of Manifold Specification Sheet Entry

		D side	1	2	3	4	5	6	24	U side
Valve model	Type of actuation	(J) JSY1000 series	1	3				6		
		(K) Ejector Supply/Release valve			1	1	3			
	(L) Internal pilot									
Manifold option	Spacer type ejector model	(N) Body type			1	1	3			
		(O) Nominal nozzle size			07	07	07			
		(P) Exhaust type			C6					
		(Q) Vacuum break flow adjusting unit					N			
	Blanking plate JSY11M-26P-1A									
Individual SUP spacer JSY11M-38P-1A-C4										
- Omission -			- Omission -							
(G) A, B port size	A, B port		C4	C4	C6	C6	C6			
Plug	A port									
	B port						C			

Order procedure of the above order example indicates that vacuum port of spacer type ejector is either A or B port. When only one vacuum port is desired, manifold specification sheet must be used to specify plug. It shows the manifold specification sheet in which plug is specified on B port of the fifth station.

## Spacer Type Ejector/Specific Product Precautions 1

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For 3/4/5-port solenoid valve and vacuum equipment precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: <https://www.smcworld.com>

### Spacer Type Ejector

#### Design / Selection

#### Warning

##### 1. Vacuum adsorption

At the time of vacuum adsorption, be sure to supply a constant supply of vacuum. Failure to do so may result in foreign matter sticking to the adsorption pad or air leakage, causing the workpiece to drop.

##### 2. Ventilation

Provide ventilation when using a spacer type ejector in a confined area, such as in a closed control panel. For example, install a ventilation opening, etc., in order to prevent pressure from increasing inside of the confined area and to release the heat generated by the valve.

##### 3. Mounting the suction filter

This product is not mounted with a suction filter. The vacuum ejector suctions surrounding dust and water droplets during suctioning of the workpiece. Therefore, it is necessary to avoid the entry of the dust and water droplets into the product. We recommend that you separately install a suction filter in the vacuum side piping. If water droplets or others could be suctioned, please consider installation of a drain separator for vacuum or the like.

##### 4. Vacuum holding

Since valves are subject to air leakage, they cannot be used for applications such as holding vacuum in a pressure vessel. SMC can issue no guarantees regarding the maintenance of workpiece adsorption when using check valves. Take separate safety measures to prevent workpieces from dropping in the case of an electrical power outage, etc.

#### Exhaust / Exhaust Noise

#### Caution

##### 1. Exhaust

The exhaust resistance should be as small as possible to obtain the full spacer type ejector performance. There should be no shield around the exhaust slit for silencer exhaust type.

#### Exhaust / Exhaust Noise

#### Caution

##### 2. Exhaust noise

When spacer type ejector generates vacuum, noise can be heard from the exhaust port when the standard supply pressure is close to the pressure that generates peak vacuum pressure making vacuum pressure unstable. If the vacuum pressure range is adequate for adsorption, there should not be a problem. If the noise causes a problem or affects the setting of the SI Unit, change the supply pressure slightly to avoid the pressure range of the noise.

##### 3. Exhaust air

If solid substances are sucked in through the vacuum (A, B) port, they will be discharged from the exhaust port at a high speed if the exhaust (EXH) port is opened. Therefore, do not look into the exhaust port or direct the exhaust port toward a person when the spacer type ejector is operating.

#### How to Mount the Product

#### Caution

##### 1. Do not drop, hit, or apply excessive impact to the product when handling it.

Even if the body looks undamaged, the internal components may be damaged, leading to a malfunction.

##### 2. Load to the body

The product body is made of resin; therefore, do not apply load to the port after mounting. Prevent any kind of operation which generates moment as this may cause reduced performance or damage to the body.

## JSY1000 Series

# Spacer Type Ejector/Specific Product Precautions 2

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For 3/4/5-port solenoid valve and vacuum equipment precautions, refer to the “Handling Precautions for SMC Products” and the “Operation Manual” on the SMC website: <https://www.smcworld.com>

### Spacer Type Ejector

#### Piping

#### **Caution**

When piping to the product, be careful not to confuse the vacuum port (A, B port) with the exhaust port of the spacer type ejector. Otherwise this can result in damage or reduced performance. Apply compressed air after confirming that the piping is connected correctly.

If each exhaust piping for the port exhaust ejectors are connected and made into centralized piping, the exhausted air will flow back into the exhaust path which is not operating, and will then be exhausted from the vacuum port. Exhaust individually.

#### Air Consumption

#### **Caution**

When the spacer type ejector is generating vacuum, air is consumed. Therefore, if the air supply capacity is insufficient, the supply pressure may drop. As a guide for sufficient air supply capacity, we recommend that you secure a supply capacity three times or more the air consumption of the ejector.
