## MGP Series

∅12, ∅16, ∅20, ∅25, ∅32, ∅40, ∅50, ∅63, ∅80, ∅100

Up to  
**24%**  
Weight  
reduced!

Weight reduced by up to 24% with  
a shorter guide rod and thinner plate

**3 types of bearing**  
can be selected.

● Slide bearing

MGPM series

● Ball bushing

MGPL series

● High precision ball bushing

MGPA series

Guide rod shortened  
for MGPM40-25 stroke

Max. **22** mm

Space required between the  
bottom of the cylinder body and  
your equipment is reduced.

Space saving

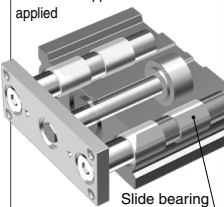

With air cushion

Water resistant cylinder

## 3 types of bearing can be selected.

**Slide bearing**  
**MGPM series**

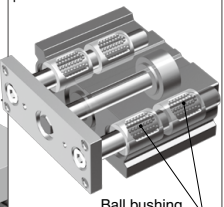

Suitable for lateral load applications such as a stopper where shock is applied

Slide bearing

**Ball bushing**  
**MGPL series**

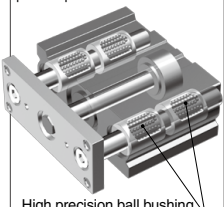

Smooth operation suitable for pusher and lifter

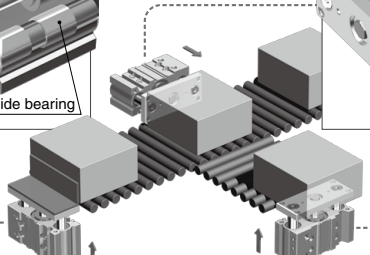

Ball bushing

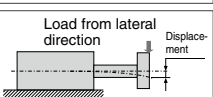

**High precision ball bushing**  
**MGPA series**

Suitable for minimizing plate displacement

High precision ball bushing

Load from lateral direction      Displacement

## Basic Type

### Proposals for Improving Product Life

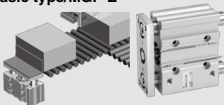

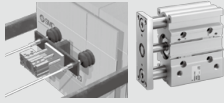

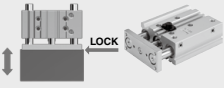

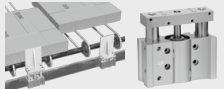

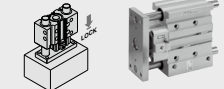

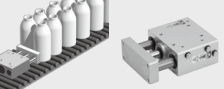

SMC offers a wide range of models suitable for various applications and operating environments. This includes models that can be used in environments that the basic model cannot, such as those where coolant liquid, water droplets/splashing, dust, etc., are present. When using in environments where the above are present, it is possible to improve the service life of the product by selecting a model ideal for use in such environments.

| <b>Nil</b> | Without auto switch (Built-in magnet) |
|------------|---------------------------------------|

\*: For applicable auto switches, refer to the table below.

### Cylinder stroke [mm]

Refer to Standard Strokes on page 537.

### Proposals for Improving Water and Dust-resistance

SMC offers a wide range of models suitable for various operating environments. This includes models that can be used in environments that the basic model cannot, such as those where coolant liquid, water droplets/splashing, dust, etc., are present. See below for details.

- Water resistant cylinder (➔ Refer to page 540.)
- Cylinder with stable lubrication function (Lube-retainer) (➔ Refer to page 541.)
- Dust resistant cylinder (➔ Web Catalog)

### Applicable Auto Switches/Refer to pages 1289 to 1383 for further information on auto switches.

\*1: Water resistant type auto switches are mountable on the above models, but in such case SMC cannot guarantee water resistance.

A water resistant type cylinder is recommended for use in an environment which requires water resistance.

However, please contact SMC for water resistant products of ø12 and ø16.

\*2: The D-P3DWA□ is mountable on bore size ø25 to ø100.

\*3: 1 m type lead wire is only applicable to the D-A93.

\*: Lead wire length symbols: 0.5 m-----Nil (Example) M9NW  
1 m-----M (Example) M9NWM  
3 m-----L (Example) M9NWL  
5 m-----Z (Example) M9NWZ

\*: Solid state auto switches marked with "○" are produced upon receipt of order.

\*: Other than the auto switches listed above, the D-P4DW type can be mounted. Refer to page 595 for details.

\*: For details about auto switches with pre-wired connector, refer to pages 1358 and 1359.

\*: Auto switches are shipped together, (but not assembled).

### High Precision Ball Bushing/MGPA

#### ⚠ Caution

#### Positioning accuracy for pin hole on the plate

Dispersion of dimensions when machining each component will be accumulated in the plate pin hole positioning accuracy when mounting this cylinder. Values below are referred to as a guide.

[Side mounting]

$$A = \text{Catalog dimension} \pm^* (0.1 + L_1 \times 0.0008) \text{ [mm]}$$

\*: To be 0.15 for  $\phi 80, \phi 100$

Note) Displacement by load and self-weight deflection by plate and guide rod are not included.

[Bottom mounting]

$$B = \pm (0.045 + L_2 \times 0.0016) \text{ [mm]}$$

\*: The guide rod and self-weight for the plate are not included in the above displacement values.  
 \*\*: Allowable rotating torque, and operating range when used as a lifter, are the same as those of the MGPL series.

# Basic Type MGP Series Model Selection

## Selection Conditions

| Mounting orientation  | Vertical    |             | Horizontal  |            |
|-----------------------|-------------|-------------|-------------|------------|
|                       |             |             |             |            |
| Maximum speed [mm/s]  | 200 or less | 400         | 200 or less | 400        |
| Graph (Slide bearing) | (1), (2)    | (3), (4)    | (13), (14)  | (15), (16) |
| Graph (Ball bushing)  | (5) to (8)  | (9) to (12) | (17), (18)  | (19), (20) |

### Selection Example 1 (Vertical Mounting)

#### Selection conditions

Mounting: Vertical  
Bearing type: Ball bushing  
Stroke: 30 stroke  
Maximum speed: 200 mm/s  
Load mass: 3 kg  
Eccentric distance: 90 mm

Find the point of intersection for the load mass of 3 kg and the eccentric distance of 90 mm on graph (5), based on vertical mounting, ball bushing, 30 stroke, and the speed of 200 mm/s.

→ **MGPL25-30Z** is selected.

### Selection Example 2 (Horizontal Mounting)

#### Selection conditions

Mounting: Horizontal  
Bearing type: Slide bearing  
Distance between plate and load center of gravity: 50 mm  
Maximum speed: 200 mm/s  
Load mass: 2 kg  
Stroke: 30 stroke

Find the point of intersection for the load mass of 2 kg and 30 stroke on graph (13), based on horizontal mounting, slide bearing, the distance of 50 mm between the plate and load center of gravity, and the speed of 200 mm/s.

→ **MGPM20-30Z** is selected.

(5) 30 stroke or less,  $V = 200$  mm/s or less

(13)  $L = 50$  mm,  $V = 200$  mm/s or less

· When the maximum speed exceeds 200 mm/s, the allowable load mass is determined by multiplying the value shown in the graph at 400 mm/s by the coefficient listed in the table below.

| Max. speed  | Up to 300 mm/s | Up to 400 mm/s | Up to 500 mm/s |
|-------------|----------------|----------------|----------------|
| Coefficient | 1.7            | 1              | 0.6            |

· Use the Guide Cylinder Selection Software, when the eccentric distance is 200 mm or more.

## Vertical Mounting **Slide Bearing**

— Operating pressure 0.4 MPa  
 - - - - - Operating pressure 0.5 MPa or more

### MGPM12 to 100

(1) 50 stroke or less,  $V = 200$  mm/s or less

(2) Over 50 stroke,  $V = 200$  mm/s or less

(3) 50 stroke or less,  $V = 400$  mm/s

(4) Over 50 stroke,  $V = 400$  mm/s

· Use the Guide Cylinder Selection Software, when the eccentric distance is 200 mm or more.

— Operating pressure 0.4 MPa  
 - - - - - Operating pressure 0.5 MPa or more

**Vertical Mounting** **Ball Bushing**

**MGPL12 to 25, MGPA12 to 25**

(5) 30 stroke or less,  $V = 200$  mm/s or less

(6) Over 30 stroke,  $V = 200$  mm/s or less

**MGPL32 to 100, MGPA32 to 100**

(7) 50 stroke or less,  $V = 200$  mm/s or less

(8) Over 50 stroke,  $V = 200$  mm/s or less

· Use the Guide Cylinder Selection Software, when the eccentric distance is 200 mm or more.

## Vertical Mounting **Ball Bushing**

— Operating pressure 0.4 MPa

### MGPL12 to 25, MGPA12 to 25

(9) 30 stroke or less,  $V = 400$  mm/s

(10) Over 30 stroke,  $V = 400$  mm/s

### MGPL32 to 100, MGPA32 to 100

(11) 50 stroke or less,  $V = 400$  mm/s

(12) Over 50 stroke,  $V = 400$  mm/s

· Use the Guide Cylinder Selection Software, when the eccentric distance is 200 mm or more.

## Operating Range when Used as Stopper

### Bore Size: $\phi 12$ to $\phi 25$ /MGPM12 to 25 (Slide Bearing)

\*: When selecting a model with a longer L dimension, be sure to choose a bore size which is sufficiently large.

### ⚠ Caution

#### Caution on handling

1. When using as a stopper, select a model with 30 stroke or less.
2. The MGPL (Ball bushing) and the MGPA (High precision ball bushing) cannot be used as a stopper.

- \*: The use of a slot (width X6, length 7, depth 5) allows for a relaxed pin pitch tolerance, with the pin hole (ø6H9, depth 10) as the reference, without affecting mounting accuracy.
- \*: For intermediate strokes other than standard strokes, refer to Manufacture of Intermediate Strokes on page 537.
- \*: Choice of Rc, NPT, G port is available. (Refer to page 536.)

**Number of auto switches**

**With air cushion**

**Cylinder stroke [mm]**  
Refer to Standard Strokes on page 559.

**Made to Order**  
For details, refer to page 559.

**Auto switch**  
\*: For applicable auto switches, refer to the table below.

**For bore size 16, only M5 x 0.8 is available.**

\*1: Water resistant type auto switches are mountable on the above models, but in such case SMC cannot guarantee water resistance.

A water resistant type cylinder is recommended for use in an environment which requires water resistance.

However, please contact SMC for water resistant products of ø12 and ø16.

\*2: The D-P3DWA□ is mountable on bore size ø25 to ø100.

\*3: 1 m type lead wire is only applicable to the D-A93.

\*: Lead wire length symbols: 0.5 m.....Nil (Example) M9NW  
1 m.....M (Example) M9NWM  
3 m.....L (Example) M9NWL  
5 m.....Z (Example) M9NWZ

\*: Solid state auto switches marked with "○" are produced upon receipt of order.

\*: Other than the auto switches listed above, the D-P4DW type can be mounted. Refer to page 595 for details.

\*: For details about auto switches with pre-wired connector, refer to pages 1358 and 1359.

\*: Auto switches are shipped together, (but not assembled).

## High Precision Ball Bushing/MGPA

### ⚠ Caution

**Positioning accuracy for pin hole on the plate**  
Dispersion of dimensions when machining each component will be accumulated in the plate pin hole positioning accuracy when mounting this cylinder. Values below are referred as a guide.

[Side mounting]

$$A = [\text{Catalog dimension}] \pm \overset{\ast 1}{(0.1 + L_1 \times 0.0008)} \text{ [mm]}$$

\*1: To be 0.15 for ø80, ø100

\*: Displacement by load and self-weight deflection by plate and guide rod are not included.

[Bottom mounting]

$$B = \pm (0.045 + L_2 \times 0.0016) \text{ [mm]}$$

## Non-rotating Accuracy of Plate

Non-rotating accuracy  $\theta$  when retracted and when no load is applied should be not more than the values shown in the table.

### Selection Example 1 (Vertical Mounting)

#### Selection conditions

Mounting: Vertical  
Bearing type: Ball bushing  
Stroke: 75 stroke  
Maximum speed: 200 mm/s  
Load mass: 7 kg  
Eccentric distance: 70 mm

Find the point of intersection for the load mass of 7 kg and the eccentric distance of 70 mm on graph (5), based on vertical mounting, ball bushing, 75 mm stroke, and the speed of 200 mm/s.

→ **MGPL25-75AZ** is selected.

(5) 75 stroke or less,  $V = 200$  mm/s or less

### Selection Example 2 (Horizontal Mounting)

#### Selection conditions

Mounting: Horizontal  
Bearing type: Slide bearing  
Distance between plate and load center of gravity: 40 mm  
Maximum speed: 400 mm/s  
Load mass: 8 kg  
Stroke: 100 stroke

Find the point of intersection for the load mass of 8 kg and 100 stroke on graph (17), based on horizontal mounting, slide bearing, the distance of 40 mm between the plate and load center of gravity, and the speed of 400 mm/s.

→ **MGPM32-100AZ** is selected.

(17)  $L = 50$  mm,  $V = 400$  mm/s

· When the maximum speed exceeds 200 mm/s, the allowable load mass is determined by multiplying the value shown in the graph at 400 mm/s by the coefficient listed in the table below.

| Maximum     | Up to 300 mm/s | Up to 400 mm/s | Up to 500 mm/s |
|-------------|----------------|----------------|----------------|
| Coefficient | 1.7            | 1              | 0.6            |

· Use the Guide Cylinder Selection Software, when the eccentric distance is 200 mm or more.

※: When selecting a model with a longer L dimension, be sure to choose a bore size which is sufficiently large.

#### **Caution**

##### Caution on handling

1. When using as a stopper, select a model with 25 stroke or less.
2. The MGPL (Ball bushing) and the MGPA (High precision ball bushing) cannot be used as a stopper.

## Ø80, Ø100/MGPM, MGPL, MGPA (With Air Cushion)

\*: The use of a slot (width X6, length 7, depth 5) allows for a relaxed pin pitch tolerance, with the pin hole (Ø6H9, depth 10) as the reference, without affecting mounting accuracy.

\*: For intermediate strokes other than standard strokes, refer to Manufacture of Intermediate Strokes on page 559.

\*: Choice of Rc, NPT, G port is available. (Refer to page 558.)

\*1: Water resistant type auto switches can be mounted on the above models, but in such case SMC cannot guarantee water resistance.

Please consult with SMC regarding water resistant types with the above model numbers.

\*2: 1 m type lead wire is only applicable to the D-A93.

\*: Lead wire length symbols: 0.5 m..... Nil (Example) M9NW  
 1 m..... M (Example) M9NWM  
 3 m..... L (Example) M9NWL  
 5 m..... Z (Example) M9NWZ

\*: Solid state auto switches marked with "○" are produced upon receipt of order.

\*: Bore sizes 32 to 100 are available for D-P4DW□.

\*: Bore sizes 25 to 100 are available for D-P3DWA□.

\*: Since there are other applicable auto switches than listed above, refer to page 595 for details.

\*: For details about auto switches with pre-wired connector, refer to pages 1358 and 1359.

\*: Auto switches are shipped together, (but not assembled).

|-------------------------------|---|
| <b>Description</b>            | Spacer installation type.<br>Dealing with the stroke in 5 mm increments is available by installing spacer with standard stroke cylinder. When a spacer is mounted on the cylinder with an end lock on the rod side, use a special piston rod. |
| <b>Part no.</b>               | Refer to "How to Order" for the standard model numbers on page 575.   |
| <b>Applicable stroke [mm]</b> | 5 to 395  |
| <b>Example</b>                | Part no.: MGPM50-35-HN<br>A spacer 15 mm in width is installed in a MGPM50-50-HN. C dimension is 119 mm.  |

\*: The minimum stroke for mounting auto switches is 10 stroke or more for two switches, and 5 stroke or more for one switch.

\*: Intermediate stroke (in 1 mm increments) based on an exclusive body will be available upon request for special.

# MGP Series With End Lock

## Specific Product Precautions

Be sure to read this before handling the products.  
Refer to page 8 for safety instructions and pages 9 to 18 for actuator and auto switch precautions.

### Use Recommended Air Pressure Circuit.

#### ⚠ Caution

- It is necessary for proper locking and unlocking.

### Handling

#### ⚠ Caution

- Do not use a 3 position solenoid valve.**  
Avoid using this cylinder in combination with a 3 position solenoid valve (particularly the closed center metal seal type). If air pressure becomes sealed inside the port on the side that contains the lock mechanism, the lock will not engage. Even if the lock is engaged at first, the air that leaks from the solenoid valve could enter the cylinder and cause the lock to disengage as time elapses.
- Back pressure is necessary for unlocking.**  
Before starting, make sure that air is supplied to the side that is not equipped with a lock mechanism as shown in the diagram above. Otherwise, the lock may not disengage. (Refer to "Rock Disengagement".)
- Disengage the lock before installing or adjusting the cylinder.**  
The lock could become damaged if the cylinder is installed with its lock engaged.
- Operate the cylinder at a load ratio of 50% or less.**  
The lock might not disengage or might become damaged if a load ratio of 50% is exceeded.
- Do not synchronize multiple cylinders.**  
Do not operate two or more end lock cylinders synchronized to move a single workpiece because one of the cylinder locks may not be able to disengage when required.
- Operate the speed controller under meter-out control.**  
If operated under meter-in control, the lock might not disengage.
- On the side that has a lock, make sure to operate at the stroke end of the cylinder.**  
The lock might not engage or disengage if the piston of the cylinder has not reached the stroke end.
- Do not use the air cylinder as an air-hydro cylinder. This may result in oil leak.**
- The position adjustment of the auto switch should be performed at two positions; a position determined by the stroke and a position after the backlash movement (by 2 mm).**  
When a 2-color indicator auto switch is adjusted to show green at the stroke end, the indication may turn red when the cylinder returns by the backlash. This, however, is not an error.

### Operating Pressure

#### ⚠ Caution

- Supply air pressure of 0.15 MPa or higher to the port on the side that has the lock mechanism, as it is necessary for disengaging the lock.

### Exhaust Air Speed

#### ⚠ Caution

- The lock will engage automatically if the air pressure at the port on the side that has the lock mechanism becomes 0.05 MPa or less. Be aware that if the piping on the side that has the lock mechanism is narrow and long, or if the speed controller is located far from the cylinder port, the exhaust air speed could become slower, involving a longer time for the lock to engage. A similar result will ensure if the silencer that is installed on the exhaust port of the solenoid valve becomes clogged.

### Lock Disengagement

#### ⚠ Warning

- To disengage the lock, make sure to supply air pressure to the port on the side without a lock mechanism, thus preventing the load from being applied to the lock mechanism. (Refer to the recommended air pressure circuit.) If the lock is disengaged when the port on the side that does not contain a lock mechanism is in the exhausted state and the load is being applied to the lock mechanism, undue force will be applied to the lock mechanism, and it may damage the lock mechanism. Also, it could be extremely dangerous, because the piston rod could move suddenly.

### Manual Disengagement

#### ⚠ Caution

##### 1. Non-locking type manual release

Insert the bolt, which is provided as an accessory part, through the rubber cap (it is not necessary to remove the rubber cap). Screw the bolt into the lock piston and pull the bolt to disengage the lock. Releasing the bolt will re-engage the lock.  
The bolt size, pulling force, and the stroke are listed below.

| Bore size [mm] | Thread size                | Pulling force | Stroke [mm] |
|----------------|----------------------------|---------------|-------------|
| 20, 25, 32     | M2.5 x 0.45 x 25 L or more | 4.9 N         | 2           |
| 40, 50, 63     | M3 x 0.5 x 30 L or more    | 10 N          | 3           |
| 80, 100        | M5 x 0.8 x 40 L or more    | 24.5 N        | 3           |

Bolt should be detached under normal operation, otherwise it may cause malfunction of the locking feature.

##### 2. Locking type manual release

Turn 90° counterclockwise while pushing the M/O knob. Lock is released when ▲ on the cap and ▼ OFF mark on the M/O knob correspond. (Lock remains released.)

When locking is desired, turn 90° clockwise while fully pushing the M/O knob and correspond ▲ on the cap and ▼ ON mark on the M/O knob. Confirm the correct position by click sound "click". Otherwise, lock may not be engaged.

| Graph (Slide bearing type) | (1), (2)    | (3), (4) | (5), (6)    | (7), (8) |

### Selection Example 1 (Vertical Mounting)

#### Selection conditions

Mounting: Vertical  
Stroke: 50 stroke  
Maximum speed: 200 mm/s  
Load mass: 100 kg  
Eccentric distance: 100 mm

Find the point of intersection for the load mass of 100 kg and the eccentric distance of 100 mm on graph 1, based on vertical mounting, 50 mm stroke, and the speed of 200 mm/s.

→ **MGPS80-50** is selected.

(1) 50 stroke or less,  $V = 200$  mm/s or less

### Selection Example 2 (Horizontal Mounting)

#### Selection conditions

Mounting: Horizontal  
Distance between plate and load center of gravity: 50 mm  
Maximum speed: 200 mm/s  
Load mass: 30 kg  
Stroke: 100 stroke

Find the point of intersection for the load mass of 30 kg and 100 stroke on graph 5, based on horizontal mounting, the distance of 50 mm between the plate and load center of gravity, and the speed of 200 mm/s.

→ **MGPS80-100** is selected.

(5)  $L = 50$  mm,  $V = 200$  mm/s or less

When the maximum speed exceeds 200 mm/s, the allowable load mass is determined by multiplying the value shown in the graph at 400 mm/s by the coefficient listed in the table below.

| Maximum     | Up to 300 mm/s | Up to 400 mm/s | Up to 500 mm/s |
|-------------|----------------|----------------|----------------|
| Coefficient | 1.7            | 1              | 0.6            |

Use the Guide Cylinder Selection Software, when the eccentric distance is 200 mm or more.

**Vertical Mounting** Slide Bearing

— Operating pressure 0.4 MPa  
 - - - Operating pressure 0.5 MPa or more

**MGPS50, 80**

(1) 50 Stroke or Less,  $V = 200$  mm/s or less

(2) Over 50 Stroke,  $V = 200$  mm/s or less

(3) 50 Stroke or Less,  $V = 400$  mm/s

(4) Over 50 Stroke,  $V = 400$  mm/s

· Use the Guide Cylinder Selection Software, when the eccentric distance is 200 mm or more.

### MGPS50, 80

(5) L = 50 mm, V = 200 mm/s or less

(6) L = 100 mm, V = 200 mm/s or less

(7) L = 50 mm, V = 400 mm/s

(8) L = 100 mm, V = 400 mm/s

**Operating Range when Used as Stopper**

- \*: When selecting a model with a longer L dimension, be sure to choose a bore size which is sufficiently large.
- \*: Refer to the horizontal mounting selection graph if line pressure is to be applied by a roller conveyor after the workpiece is stopped.

**Caution**

**Caution on handling**

When using as a stopper, select a model with 50 stroke or less.

For D-P3DWA (\*: Cannot be mounted on bore size ø20.)

ø25 to ø63

ø80, ø100

For D-P4DW (\*: Cannot be mounted on bore size ø25 or less.)

ø32 to ø63

ø80, ø100

For 25 stroke  
\*: For bore sizes ø40 to ø63 with two auto switches, one switch is mounted on each side.

### Mounting of Auto Switch

## ⚠ Caution

In the case of 25 st or less with head side end lock type, it might not insert auto switch from the rod side. In this case, install it after removing the plate temporarily. Regarding the plate removal and the way of assembly, please consult with SMC.

\*: With pre-wired connector is also available for solid state auto switches.

For details, refer to pages 1358 and 1359.

\*: Normally closed (NC = b contact) solid state auto switches (D-M9□E(V)) are also available.

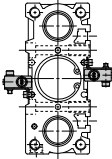

For details, refer to page 1308.

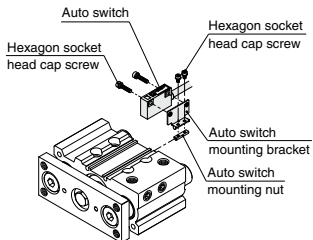

\*: When installing the D-P4DW, use the BMG7-032 auto switch mounting bracket.

## Specific Product Precautions 1

Be sure to read this before handling the products.  
Refer to page 8 for safety instructions and pages 9 to 18 for actuator and auto switch precautions.

### Mounting

#### ⚠ Warning

1. Never place your hands or fingers between the plate and the body.

Be very careful to prevent your hands or fingers from getting caught in the gap between the cylinder body and the plate when air is applied.

#### ⚠ Caution

1. Use cylinders within the piston speed range.

An orifice is set for this cylinder, but the piston speed may exceed the operating range if the speed controller is not used. If the cylinder is used outside the operating speed range, it may cause damage to the cylinder and shorten the service life. Adjust the speed by installing the speed controller and use the cylinder within the limited range.

2. Pay attention to the operating speed when the product is mounted vertically.

When using the product in the vertical direction, if the load factor is large, the operating speed can be faster than the control speed of the speed controller (i.e. quick extension). In such cases, it is recommended to use a dual speed controller.

3. When used near the lower limit of the operating piston speed, stick-slip may occur depending on the operating conditions. To counter this, it is recommended to use an operating pressure with margin.

4. Do not use the product if an air leak occurs.

If an air leak does occur, this may result in the speed being increased beyond the speed controller's adjustment capability, which may further lead to the products speed becoming impossible to control. If the speed is increased excessively, internal components and guide sections may be damaged.

5. Do not scratch or gouge the sliding portion of the piston rod and the guide rod.

Damaged seals etc. will result in leakage or malfunction.

6. Do not dent or scratch the mounting surface of the body and the plate.

The flatness of the mounting surface may not be maintained, which would cause an increase in sliding resistance.

7. Make sure that the cylinder mounting surface has a flatness of 0.05 mm or less.

If the flatness of the workpieces and brackets mounted on the plate is not appropriate, sliding resistance may increase.

If it is difficult to maintain a flatness of 0.05 or less, put a thin shim ring (prepared by user) between the plate and workpiece mounting surface to prevent the sliding resistance from increasing.

### Mounting

#### ⚠ Caution

8. Be sure that the piston rods are retracted when mounting workpieces on the plate.

If workpieces are mounted on the plate when the piston rods are extended, it can lead to distortion of the guide unit, resulting in a malfunction.

9. Bottom of cylinder

The guide rods protrude from the bottom of the cylinder at the end of the retracting stroke, and therefore, in cases where the cylinder is to be bottom mounted, it is necessary to provide bypass ports in the mounting surface for the guide rods, as well as holes for the hexagon socket head cap screws which are used for mounting.

Moreover, in applications where impact occurs from a stopper etc., the mounting screws should be inserted to a depth of 2d or more.

### Piping

#### ⚠ Caution

Depending on the operating conditions, piping port positions can be changed by using a plug.

##### 1. M5

After tightening by hand, tighten additional 1/6 to 1/4 rotation with a tightening tool.

##### 2. Tapered thread for Rc port (MGP) and NPT port (MGP□□TN)

Tighten with proper tightening torque below. Also, use sealant tape on the plug. With regard to the sunk dimension of a plug ("a" dimension in the drawing), use the stipulated figures as a guide and confirm the air leakage before operation.

\* If tightening plugs on the top mounting port with more than the proper tightening torque, plugs will be screwed much deeply and air passage will be squeezed. Consequently, the cylinder speed will be restricted.

| Connection thread (plug) size | Proper tightening torque [N·m] | a dimension    |
|-------------------------------|--------------------------------|----------------|
| 1/8                           | 7 to 9                         | 0.5 mm or less |
| 1/4                           | 12 to 14                       | 1 mm or less   |
| 3/8                           | 22 to 24                       | 1 mm or less   |

##### 3. Parallel pipe thread for G port (MGP□□TF)

Screw in the plug to the surface of the body (dimension "a" in the drawing) by checking visually instead of using the tightening torque shown in the table.

### Cushion

#### With air cushion

#### ⚠ Warning

##### 1. Do not open the cushion valve excessively.

Air leakage will occur if operated after opening by 4 rotations or more. Furthermore, a stopper mechanism is provided for the cushion valve, and it should not be forced open beyond that position. Be aware that the cushion valve may jump up from the cover when the air is supplied.

#### ⚠ Caution

##### 1. Be sure to use the cylinder after the air cushion has been adjusted appropriately.

First, fully close the cushion valve. Start the operation at the cylinder speed to be used with the load applied, and then open the cushion valve gradually to make the adjustment. The optimal adjustment is that the piston reaches its stroke end and the collision sound is minimized. If the cushion valve is used without adjusting the air cushion appropriately, this may cause damage to the retaining ring or piston.

| Bore size [mm]            | Applicable tool                  |
|---------------------------|----------------------------------|
| <b>16, 20, 25, 32, 40</b> | JIS B4648 hexagon wrench key 1.5 |
| <b>50, 63, 80, 100</b>    | JIS B4648 hexagon wrench key 3   |

##### 2. Be sure to operate a cylinder equipped with air cushion to the end of the stroke.

If it is not operated to the end of the stroke, the effect of the air cushion will not be fully exhibited. Consequently, in cases where the stroke is regulated by an external stopper etc., caution must be exercised, as the air cushion may become completely ineffective.

##### 3. Do not open the cushion needle after rotating it numerous times in a row.

**Though uncommon, there are cases in which the cushion needle may leak air.**

The cushion needle should be adjusted by gradually opening it while checking the operation of the cylinder cushion.
