Please make the following alterations to the *Communication Interface User's Manual,* IM 701310-17E(CD-ROM).

■ Page 6-2   "Writing/Reading from Registers"

The *ESE command is used to set the bits in <u>the standard event enable register</u> to 1's or 0's.

The *ESE? command is used to query whether the bits in <u>the standard event enable register</u> are 1's or 0's. For details regarding these commands, see chapter 5.
